

CONTENTS

Preface		ix
1 The generalized scheme of allocation and the components of random graphs		1
1.1 The probabilistic approach to enumerative combinatorial problems		1
1.2 The generalized scheme of allocation		14
1.3 Connectivity of graphs and the generalized scheme		22
1.4 Forests of nonrooted trees		30
1.5 Trees of given sizes in a random forest		42
1.6 Maximum size of trees in a random forest		48
1.7 Graphs with unicyclic components		58
1.8 Graphs with components of two types		70
1.9 Notes and references		86
2 Evolution of random graphs		91
2.1 Subcritical graphs		91
2.2 Critical graphs		97
2.3 Random graphs with independent edges		100
2.4 Nonequiprobable graphs		109
2.5 Notes and references		120
3 Systems of random linear equations in $GF(2)$		122
3.1 Rank of a matrix and critical sets		122
3.2 Matrices with independent elements		126
3.3 Rank of sparse matrices		135
3.4 Cycles and consistency of systems of random equations		143
3.5 Hypercycles and consistency of systems of random equations		156

viii	Contents	
	3.6 Reconstructing the true solution	164
	3.7 Notes and references	177
4	Random permutations	181
	4.1 Random permutations and the generalized scheme of allocation	181
	4.2 The number of cycles	183
	4.3 Permutations with restrictions on cycle lengths	192
	4.4 Notes and references	212
5	Equations containing an unknown permutation	219
	5.1 A quadratic equation	219
	5.2 Equations of prime degree	225
	5.3 Equations of compound degree	235
	5.4 Notes and references	239
	Bibliography	241
	Index	251
