Index

- Abegg, Richard, 171
- Abel, Emil, 31
- absolute zero temperature, 2, 136, 139–40, 143, 166, 174, 178, 212; resistance at, 179; state of matter approaching, 151; unattainability of, 215
- academia: and industry, 7
- Acheson, Edward, 119
- affinity: comparative theory of, 43–4; *see also* chemical affinity
- affinity theory, 141–2
- Allgemeine Elektrizitätsgesellschaft (AEG), 92, 95, 97f, 98–102, 107
- Althoff, Friedrich, 42, 59, 72, 148, 218, 224, 246
- Aluminothermie*, 118
- aluminum, 118–19, 179
- ammonia, 3, 150, 176
- ammonia synthesis, 5, 23, 129–30, 131, 216
- Ampère's laws, 175
- Amsterdam Academy of Sciences, 180
- analogies, 51–2, 55, 65, 67–8, 70, 176–7; Nernst's model-building by, 178, 179–80, 242
- Annalen der Physik und Chemie*, 61, 79, 81, 86
- Anschaulichkeit*, 71, 75, 174, 176, 199
- anti-Semitism, 165, 186
- argon, 114, 149, 157–8
- Armstrong, Henry Edwards, 172
- Arrhenius, Svante, x, 1, 9, 10–11, 14, 22, 36, 41, 42, 43, 53, 57, 62–3, 73, 76, 120, 141, 183, 213, 246, 247, 248; dissociation theory, 32–3, 34, 48, 49; independent research, 60–2; as kineticist, 64; and Nernst's Nobel Prize candidacy, 217–28, 232–3, 234–7; Nobel Prize, 208–9, 217; and problem of affinity, 17; relationship with Nernst, 35, 51, 54, 217–28; theory of ionic dissociation, 88, 172
- Art Deco, 100
- Art Nouveau, 100, 107
- Aschkinass, Emil, 219n38
- astrophysics, vii, 1, 22, 24, 176, 204, 241, 242
- atomic heats, 5, 157, 168, 228, 235, 237; and electrical resistivity, 160; electrons and, 173; low, 210
- atomic hypothesis, 29, 77, 78
- atomic model, 182, 190, 250
- atomic theory, 68; and thermodynamics, 88
- atomic weight determinations, 114, 128, 168
- atomic weights, 113, 168, 196
- atomism, 18, 61, 242; and thermodynamics, 166–7
- atoms, 249; quantization of, 180, 182
- “Auer mantle,” 101
- Auerlicht-Gesellschaft, 101, 102
- Auskristallisation*, 44–5
- Austin, Louis, 120
- automobiles, 110, 111, 252
- Avogadro, Amedeo, 68–9, 71, 113
- BAAS (British Association for the Advancement of Science), 181
- Badische Anilin-und Soda Fabrik (BASF), 42, 129, 131
- Bahr, Eva von, 180
- ballast, 94, 95, 104
- battery(ies), 91, 110
- Bauhaus, 99
- Bechstein (piano manufacturer), 243
- Becker, C. H., 243
- Beckmann, Ernst, 61, 213–14
- behavior of gases at high temperatures, 150
- behavior of matter, 3; at absolute zero, 2, 212; at extremes of temperature, 151–2; at high temperatures, 111, 129
- behavior of solids and gases at high temperatures, 91

- behavior of solids at low temperatures, 249
- Behn, Andreas R., 167, 224, 237
- Behrens, Peter, 99–100
- Benedicks, C., 213
- Berlin, 110–11, 174–5; Nernst in, 5, 147–63
- Berlin Academy of Sciences, 24, 148
- Berlin scientific establishment, 25, 226
- Berlin Society for Refrigeration, 158
- Berlin stock exchange, 147
- Berliner, Arnold, 186
- Berliner Tageblatt*, 162–3
- Bernoulli, A. L., 177
- Berthollet, Claude Louis, 10
- Berthelot, Marcellin, 67, 73, 122, 134–6, 137, 138, 140, 142, 153; claim to be founder of thermochemistry, 145
- Besso, Michele, 191
- Bidwell, Shelford, 38, 39
- Biochemisches Zentralblatt*, 226
- biochemistry, 8, 12
- Bismarck, Otto von, 27, 92
- Bjerrum, Niels, 176–7, 180, 204
- black body, 123, 126, 175
- black-body problem, 64
- black-body radiation, x, 103, 114, 115–16, 117, 119, 153, 198, 250; Planck distribution law for, 181
- black-body radiation laws, 123
- Bodenstein, Max, 22, 120, 130, 134, 233
- Bohr, Niels, 181–2, 185; atomic model, 190, 250
- boiling points, 153, 159
- bolometer, 153
- Boltzmann, Ludwig, 18, 19–20, 34, 36, 37, 38, 39, 43, 46, 73, 78, 81, 109, 133, 135, 166, 175, 183, 190, 198, 211, 218, 225; Arrhenius's work with, 61; definition of entropy, 200; Einstein compared to, 184–5; entropy and probability relation, 194; historical relativism, 48; influence on Nernst, 31–2, 241, 242; legacy of, 63; molecular kinetic views of, 64; Nernst's collaboration with, 39–40; sponsor to Nernst, 59
- Born, Max, 164, 167, 201, 204, 216, 238, 249
- Bouty, Edmond, 62
- Brahe, Tycho, vii–viii
- Bredig, Georg, 60, 121, 147, 152, 183–4
- Brillouin, M., 203
- British *Nature*, 203
- Broglie, Maurice de, 190
- Brühl, H., 15, 56, 145
- Brussels: Parc Léopold, 187
- Buddenbrooks, The* (Mann), 105
- Bunsen, Robert, 29, 56, 220
- Bunsen burner, 56, 61
- Bunsen Congress, 224
- Bunsengesellschaft (German Electrochemical Society), 15–16, 59–60, 122, 123, 125, 130, 171, 181; 18th Meeting of, 158; Kiel meeting of, 176–7
- calorimeter/calorimetry, xi, 154–5, 159, 161–2, 216, 248; copper, 154; platinum, 157; vacuum, 155–7, 158
- calorimetric bomb, 127, 145–6
- calorimetric measurements, 43, 145–6, 153, 168
- carbon, 114, 115
- carbon arc lamp, 92, 93–4
- carbon compounds, 177
- carbon dioxide, 150, 176
- carbon filament, 103–4, 112–18
- carbon filament bulb, 94, 95, 100
- carbon filament lamp, 101, 114
- Carborundum, 119
- Carlsberg Foundation, 176
- carnallite, 138–9
- Carnot, Sadi, 135
- Carnot-Clausius principle of thermodynamic cycles, 86, 87
- Caro, Heinrich, 42
- Casimir, Hendrik, 24–5
- chemical affinity(ies), x, 10, 11, 16, 17, 73034, 135, 142; Nernst's work in, 235, 240; Werner's theory of, 171
- chemical changes, prediction of, 137–8
- chemical decompositions at extremes of temperature range, 119, 250–1
- chemical equilibria, xi, 1, 3, 4, 113, 125, 126, 130, 150, 251; determinations of, 128, 129; Nernst's work on, 22, 214, 235, 240; predicting, ix, 2, 5, 135, 140
- chemical industry, 60, 237
- Chemical Institute of the Berlin University, 147, 217
- chemical kinetics, 120, 135, 242
- chemical reactions, 135, 142, 173, 251; electricity and, 189; feasibility of, x, 132, 142; at high temperatures, 129–30, 133–4; thermodynamics of, 167
- chemical reactivity, 170, 248; principle of maximum work, 136
- chemical thermodynamics, 1, 10
- Chemical Thermoindustry, 119
- chemical transformations, 212; at the extremes of physical conditions, 110
- chemical warfare, vii, 185, 232, 246, 247

- Chemische Energie* (Ostwald), 85
 Chemische-Technische Reichsanstalt, 148
 chemistry, ix, 1, 8, 9, 17, 18, 78, 91, 136;
 heat theorem originated in, 132; histori-
 ography of, 10, 14; interconnections
 with physics, 2; Nernst's move from, to
 physics, 151; Nernst's versatility in, 242;
 Nernst's work in, 4, 240, 250; and quan-
 tum hypothesis, 169; shift from, to
 physics, 248–9; significance of, 247;
 thermodynamics and, 175
 chemists, viii, 247; topics shared with
 physicists, 72–3
 Chicago exhibition (1893), 104, 106
 Ciamician, Giaocomo L., 235
 Clarendon Laboratories (Oxford), 5, 242
 Clark element, 235
 classical statistical mechanics, 166
 classical theory: incorporating quantum
 concepts into, 199
 Clausius, Rudolf, 22, 33, 135, 160–1, 190;
 laws by, 81
 collaborative efforts, 195, 196; Solvay con-
 gress as, 204
 combustion processes/combustions, 110,
 112–13, 145–6; fuels in, 151
Communications, 180
 compressibility, 178, 179
 Comte, Auguste, 44
 conduction, 6, 113
 conductivity, viii, 160–1, 170, 180; and
 electric motors, 120–2; instruments for,
 122–31; in metals at low temperatures,
 159–61
 conductivity studies, 101, 102–3, 141,
 142, 161, 170, 236
 conductivity theory, xi
 conductors, 123, 172; at high tempera-
 tures, 95–7
 conservation of energy, 54, 200
 cosmology, 23, 242
 cross-disciplinary discourse, 8
 cryogenic apparatus, 153
 Cryogenic Laboratory (Leiden), 249
 cryogenics, 152
 culture(s), scientific, 6–7, 8
 Curie, Marie, 181, 190
- Davy, Sir Humphry, 47, 73, 94
 Debye, Peter, 88, 164, 201–2, 204, 210,
 216, 245; and quantum theory, 232,
 233; quantum treatments, 249
 Debye's Law, 204
 Deutsche Chemische Gesellschaft, 181
 Deutsche Edison-Gesellschaft, 99
 Deutsches Museum, 99
- Dewar, James, 167, 169
 diamond, 162–3, 201
 dielectric glowers, 91–2
 dielectrics, 120–1
 diffusion, 49–50, 52, 55, 59, 70
 dilute solutions, 36, 61, 135, 178; molecu-
 lar constitution of, 81–2
 disciplinary allegiances/identities, 2
 disciplinary demarcations, 10, 19, 73, 216,
 250
 disciplinary histories, 10, 12
 disciplinary program(s): Nernst's work in,
 22–4
 discipline formation, 7
 disciplines, viii; consolidation of, 7–8; de-
 partments and chairs in, 12; idea of, as
 analytic tool, 9
 displacement, study of, ix, x
 displacement law, 114–15
 dissociation of matter, 5, 10
 dissociation phenomena, 128, 132–5
 dissociation processes, 172; osmotic pres-
 sure and, 178
 dissociation theory, 12, 32–3, 34, 89,
 236
 distribution law, 117, 124
 Dolezalek, F., 121, 219
 Drude, Paul, x, 58, 124, 171–2, 178, 226
 Du Bois-Reymond, Emil, 52, 81
 Duhem, Pierre, 18, 87
 Dulong and Petit Law of the Additivity of
 Specific Heats, 29, 113–14, 157, 160–1,
 168, 189, 237
 Dumas, Jean-Baptiste-André, 113
 Dutch Royal Academy of Sciences, 196
 dynamo, 92, 94, 98, 106
- Edison, Thomas A., 92, 94, 101, 102
 Edison Company, 92
 Ehrenfest, Paul, 184, 187, 193, 196
 Ehrenhaft, Felix, 170
 Ehrlich, Paul, 223–4, 225
 Eidgenössische Technische Hochschule
 (ETH), 115, 117, 182, 184
 Einstein, Albert, x, 1, 8, 24, 25, 29, 30, 63,
 151, 162, 166, 168, 169–70, 174, 175,
 176, 179, 187, 202, 203, 204, 237, 238,
 244; career, 41–2; formula for specific
 heats of solids, 166, 167, 168–9, 176–7,
 190; Nernst and, 182–3, 184–6; Nernst
 obituary, 247–8; paper on specific heats
 of solids, 164–6; position in German sci-
 entific community, 191; quantum theory,
 2, 196, 197–8, 199, 201, 232, 233, 249,
 250; quantum theory of solids, 2–3, 117,

- Einstein, Albert (*cont.*), 211; quantum theory of specific heats, 228; reports about, 183–4; and Solvay Congress, 180, 188, 190, 191–5, 198, 199, 200; theory of relativity, 184, 216
- electric arc, 118, 119, 129
- electric bulb, ix, 97
- electric cables, 91, 92
- electric furnaces, 118, 119
- electric lamp, 1, 3, 111, 190
- electric light, 92–5
- electric motors, 92, 98; conductivity and, 120–2
- electric transport, 55, 57, 66, 74, 172
- electrical conduction, x, 58, 113; in liquids, 23, 40
- electrical conductivity, 3, 5, 11, 91, 169, 179, 250; measurement of, 120–1; nature of, 242; Nernst's work on, 34, 40, 57; thermal conductivity and, 172
- electrical conductivity studies, 5, 43–4, 249, 251
- electrical frequency: effect on lamps, 104
- electrical industries, 19, 92, 99, 116, 118
- electrical oven, 119, 123
- electrical properties: and specific heats, 173
- electrical resistance formula, 161
- electrical resistance standardization work, 150
- electrical resistivity: atomic heat and, 160; and specific heat, 173
- electrical resistivity measurement of metals, 152–3
- electricity, 22, 48, 91–109, 140; and chemical reactions, 137, 189; heat and, 116; new uses for, 107
- electricity studies, 1, 4; specific heats and, 113–17
- electrochemical equilibria, 80, 82
- Electrochemical Institute (Göttingen), 22
- electrochemistry, 4, 6, 19, 49, 76; in extracting metals, 118–19; heat and, 142; history of, 48; Nernst/Planck methodologies in, 88; Nernst's originality in, 74; Nernst's work in, 22–3, 34, 72, 88, 228, 235, 236, 242, 247–8, 250, 251; physicalist thought in, 248; Planck's effort in, 80, 84
- Electrochemistry* (Ostwald), 44–9
- electrolysis, 29, 121, 122
- electrolytic conduction, x, 122, 127
- electrolytic conductivity, 91, 120, 122–3, 151, 190, 251; in dilute solutions, 35–6; in solids, 22, 142
- electrolytic dissociation, 22, 72
- electrolytic dissociation theory, 69, 209, 218, 221
- electrolytic lamp, x, 22, 40, 91–109, 124, 129, 220, 226–7; improved, 110
- electrolytic processes, 208, 209; kinetics of, 60
- electrolytic separation methods, 56
- electrolytic solution theory: thermodynamics in, 76, 88
- electrolytic solutions, 1; ionic dissociation theory of, 10
- electrolytic solvation pressure, 66, 68
- electrolytic theory, 78
- electromagnetism, 54, 57, 122, 251
- electromechanics, 91
- electrometer, 121
- electromotive action of ions (theory), 75
- electromotive forces (EMFs), 38, 54, 56, 140; measurement of, 78, 221, 222; Nernst-Planck exchange, 78–80, 83–4, 86, 88; Nernst's theory, 208, 235; Nernst's work on, 51, 53–5, 57, 73–5, 251; theory of, 65–6, 82
- electron, 170–3; electric charge of, 114; role in electrical conductivity, 124; role in quantum phenomena, 169–70
- electron theory, 171, 172, 173, 179
- electronic chemical bonding (theory), 12
- electronic contributions to specific heat, 169–73
- electronic structure, 180
- electronic synthesizer, 244
- electrostriction, 172
- electrotechnological industries, 3, 19, 92
- electrotechnological research, 109
- electrotechnology, 105
- electrovalency, 171
- emissivity, 103–4, 113
- energeticism, 64, 151
- energetics, 43, 45, 46, 61, 77, 78, 89
- energy: heat and, 251; new forms of, 77; quantization of, 164
- energy curves, 4–5, 231, 235
- energy quanta, 202; theory of, 190
- energy transformations, 54
- engineers/engineering, viii, 92
- entropy(ies), 2, 3, 87, 88, 136, 143, 173, 200, 212
- entropy principle, 69, 82, 86
- equilibrium laws, 12
- equilibrium problem: devising tests for, 145–6; Nernst's recasting of, 140–4; van't Hoff's formulation of, 137–40
- Erdmann, O. L., 15
- Essen, 118, 119
- ether, 169–70

- physiology, 70
- piano, 243–4
- Planck, Max, viii, 1, 8, 25, 46, 61, 62, 63–4, 66, 68, 73, 74, 76, 115, 143, 146, 166, 167, 169–70, 185, 186, 195, 196, 197, 217, 220, 232, 238, 248; argon project, 157–8; constant *h*, 193; distribution law, 124, 181, 194; entropy principle, 69; lectures, 25–6, 178; and measurements of specific heats, 149; Nernst compared with, 24, 25; Nernst-Planck exchange, 75, 77–90; Nobel Prize, 213, 229; and quantum discourse, 201; quantum hypothesis papers, 114; quantum theory, 103, 116, 117, 177, 216; quantum theory of radiation, x, 211; radiation formula, 161, 190; radiation law, 175; second quantum theory, 180, 204; second radiation theory, 202; and Solvay Congress, 182, 187–8, 189, 190, 198; thermodynamic treatment of dissociation theory, 221
- Planck “energy” levels, 181
- platinum, 125, 129, 161; correlation between conductivity and temperature of, 159–61
- platinum-platinum/rhodium element, 153
- platinum thermometer, calibration of, 159–61
- Poincaré, Henri, 45, 181, 193; Solvay Congress, 198–9, 200
- Pollitzer, A., 167
- positivism/positivists, 17, 18, 44, 45, 84
- Prague Urania society, 241
- pressure, 139
- principle of maximum work, 122, 134–6, 137–8, 140
- principle of reversibility, 139
- Pringsheim, Ernst, 115, 123–4
- Prinzipien der Chemie* (Ostwald), 45
- problems in need of solutions, 111, 117–18, 120, 150
- professionalization, 9, 13
- Prussian Academy of Sciences, 63, 157, 167, 173, 175, 176, 190, 224, 225, 241, 244; Leibniz Medal, 187
- Prym, Friedrich, 31, 34
- Puttkamer, Robert von, 27
- pyrometers, 126
- “Quanten-Kongress,” 203
- quantum chemistry, 1, 10, 234
- quantum discourse, 180, 204–5; participants in, 201; physicists in, 181–2
- quantum hypothesis, viii, 174, 191, 249; chemistry and, 169; consolidation of, 166–7; experimental confirmations of, 202–1, 207; Nernst and, 250; physicists and, 193, 195; at Solvay Congress, 198–201; validity of, 190
- quantum interactions, localization of, 170
- quantum physics, x, 25, 175; advances in, 249–50
- quantum revolution, 167, 247
- quantum statistical theory, 166–7
- quantum theory, xi, 1, 2, 66, 103, 116, 151, 153, 183, 185, 189–90, 196, 216; in context of radiation questions, 187–8; development of, 232–3; Einstein, 192, 199; historiography of, viii, x; incorporation of, 164–80; modern, 117; Nernst’s use of, as guide to research, 174–6; Planck, 216; second, 180, 190, 204; and theory/experiment correspondence, 235
- quantum theory of matter, 164, 250
- quantum theory of radiation, x, 78
- quantum theory of solids, 115, 117, 173, 185; derivation of, 175; heat theorem and, 197; theoretical and experimental work in, 182
- quantum theory of specific heats, 180, 204, 228

- radiant heat: and transformations in conducting filament, 141–2
- radiation, viii, 3, 113, 116, 249; nature of, 2, 194; noncharacteristic, 153
- radiation formula, 188, 190
- radiation laws, x, xi, 117, 119, 123, 175
- radiation measurement: instruments for, 122–31
- radiation phenomena, 5, 91
- radiation theory, 187, 190; second, 202
- Ramsay, William, 171, 202
- Raoult, François-Marie, 55
- rare earths, 105–6
- Rathenau, Emil, 98–9, 102
- Rathenau, Walther, vii, 30, 99, 107, 242
- Rayleigh, Lord, 114, 188, 190, 191
- Realschulen, 27, 28
- Recent Advances in Organic Chemistry* (Stewart), 171
- reflexiveness, organized, ix
- reflexivity, ix
- “Researches on the specific heat at low temperatures” (Nernst), 167
- residual rays, 219
- resistance, forces of, 50, 52
- resistance measurements at low temperatures, 180
- resistance ovens, 119
- resistance thermometers, 157, 158, 160
- Richards, Theodore, 135, 147, 167–8, 213, 229–31, 228; Nobel Prize, 208n1
- Richter, V. von, 56
- Riecke, Eduard, 58, 116, 124, 203, 251
