

CONTENTS

Introduction	1
1. STATISTICAL SOFTWARE PACKAGES	1
2. FOR THE FIRST-TIME COMPUTER USER	1
2.1 Technical Terms, Notation, Etc.	2
3. GETTING STARTED IN ASP	6
3.1 Starting ASP from a Floppy Disk	6
3.2 Starting ASP from a Hard Disk	7
4. USING THE ASP MENUS	7
4.1 The MAIN MENU	7
4.2 The ALT COMMANDS MENU	8
5. CREATING A DATA DIRECTORY AND A DATA FILE	9
6. MAKING CHANGES IN A DATA FILE	14
6.1 Deleting Cases: The SELECTING CASES Menu	15
7. THE ESCAPE KEY (ESC) AND EXITING ASP	16
Exercises	17
CHAPTER 1	
The Organization of Data	19
1. FREQUENCY DISTRIBUTIONS	20
1.1 Ungrouped Frequency Distributions	21
1.2 Grouped Frequency Distributions	24
1.3 Saving Your Results	26
1.3.1 Copying Your Output	26
1.3.2 Printing Your Results	27
1.3.3 Deleting OUTPUT	27
Exercises 1.1	27
2. STEM-AND-LEAF PLOTS	30
Exercises 1.2	36

CHAPTER 2		
Describing Distributions		37
1. BASIC QUANTITIES		39
2. LOCATION STATISTICS		39
3. DISPERSION STATISTICS		39
4. THE SHAPE OF A DISTRIBUTION: SKEW AND KURTOSIS STATISTICS		40
Exercises 2.1		40
5. DESCRIBING DISTRIBUTIONS OF TRANSFORMED MEASUREMENTS		42
CHAPTER 3		
Describing Individuals in Distributions: QUANTILES AND STANDARD SCORES		49
1. QUANTILES AND QUANTILE RANKS		49
Exercises 3.1		52
2. STANDARD SCORES		54
2.1 Other Standard Transformations		56
2.2 Adding New Variables to a Matrix		57
Exercises 3.2		60
3. IDENTIFYING OUTLIERS		62
3.1 Box-and-Whisker Plots		66
Exercises 3.3		68

Exercises 1.2	36

CHAPTER 6	
Sampling Distributions and Estimation	105
1. DRAWING RANDOM SAMPLES OF N OBSERVATIONS ON A UNIFORMLY DISTRIBUTED RANDOM VARIABLE	105
Exercises 6.1	109
2. SAMPLING DISTRIBUTIONS	110
2.1 The Sampling Distribution of \bar{X}	113
Exercises 6.2	114
3. POINT ESTIMATION	115
3.1 Consistency of \bar{X} as Estimator of μ	115
Exercises 6.3	116
3.2 Consistency of Relative Frequency as Estimator of p	116
Exercises 6.4	122
3.3 Estimating the Variance σ^2	123
Exercises 6.5	125
4. CONFIDENCE INTERVALS	126
Exercises 6.6	129
4.1 Interval Estimates for p	129
4.2 Interval Estimates for μ	132
4.3 Interval Estimates for σ^2	135
Exercises 6.7	136

CHAPTER 7	
Hypotheses about Proportions, Means, and Variances	139
1. HYPOTHESES ABOUT THE PROPORTION AND THE MEAN OF ONE POPULATION	139
1.1 Hypotheses about p	139
Exercises 7.1	143
1.2 Hypotheses about μ	144
1.2.1 Hypotheses about μ when σ^2 Is Known	144
Exercises 7.2	146
1.2.2 Hypotheses about μ when σ^2 Is Not Known	146
Exercises 7.3	150
2. HYPOTHESES ABOUT PROPORTIONS AND MEANS FOR TWO POPULATIONS	151
2.1 Hypotheses about p_1 and p_2	151
Exercises 7.4	154
2.2 Hypotheses about μ_1 and μ_2	155
Exercises 7.5	158
3. HYPOTHESES ABOUT VARIANCES	161
3.1 Hypotheses about σ^2	161
3.2 Hypotheses about σ_1^2 and σ_2^2	163
Exercises 7.6	164
 CHAPTER 8 	
Analysis of Variance (ANOVA)	167
1. CREATING A DATA MATRIX FOR ANOVA	167
2. ONE-WAY ANALYSIS OF VARIANCE	170
Exercises 8.1	172

<i>x</i>	<i>USER FRIENDLY</i>
3. TWO-WAY ANALYSIS OF VARIANCE	174
3.1 Two-way Analysis of Variance with Random or Mixed Effects	176
3.1.1 Using the Pooled Estimate of Error Variance	178
4. Analysis of Variance for One Experimental Factor with Repeated Measures	179
Exercises 8.2	182
CHAPTER 9	
Hypotheses about Correlation and Regression	189
1. HYPOTHESES ABOUT CORRELATION	189
1.1 Hypotheses about One Population Correlation ρ	189
1.2 Hypotheses about Two Population Correlations ρ_1 and ρ_2	193
Exercises 9.1	194
2. HYPOTHESES ABOUT REGRESSION	196
Exercises 9.2	199
CHAPTER 10	
Pearson's Chi-Square	203
1. GOODNESS-OF-FIT TESTS	203
1.1 Goodness-of-Fit Test with Data	204
1.2 Goodness-of-Fit Test with Numbers	207
1.3 Goodness-of-Fit Test for Normality	207
Exercises 10.1	208
2. TESTS OF ASSOCIATION: HOMOGENEITY AND INDEPENDENCE	211
2.1 Tests of Association Using Contingency Tables	211
2.2 Tests of Association Using Crosstabulations	214
2.2.1 The Median Test	217
Exercises 10.2	219

Cambridge University Press

978-0-521-44571-9 - User-Friendly: Workbook and ASP Tutorial to Accompany, Statistics - Concepts and Applications

[More information](#)*Table of Contents**xi***ANSWERS TO SELECTED EXERCISES****223****INDEX****233**

If you like the student version of ASP, you may be interested in purchasing a copy of either the registered version, the 386 version or the 387 version. The registered version runs on any DOS-compatible computer (even the old 8086 and 80286 machines). The 386 version exploits the extended memory capacity of newer machines, and the 387 version capitalizes on the additional speed of the 80387 and 80486 mathematics coprocessors. For information write to

DMC Software, Inc.
6169 Pebbleshire Drive
Grand Blanc, MI 48439

DMC Software will discount your price of the registered version, the 386 version or the 387 version by the U.S. list price of *User Friendly* if you fill in the information on the coupon printed below (or a copy thereof) and include it with your order.

\$19.95***User Friendly* Discount on DMC Statistics Packages**

Name _____

College or university where statistics course was taken
(please include state or province and country)

Department in which course was offered _____

The use of ASP and *User Friendly* in this course was
(please check one) optional required

<i>x</i>	<i>USER FRIENDLY</i>
3. TWO-WAY ANALYSIS OF VARIANCE	174
3.1 Two-way Analysis of Variance with Random or Mixed Effects	176
3.1.1 Using the Pooled Estimate of Error Variance	178
4. Analysis of Variance for One Experimental Factor with Repeated Measures	179
Exercises 8.2	182
CHAPTER 9	
Hypotheses about Correlation and Regression	189
1. HYPOTHESES ABOUT CORRELATION	189
1.1 Hypotheses about One Population Correlation ρ	189
1.2 Hypotheses about Two Population Correlations ρ_1 and ρ_2	193
Exercises 9.1	194
2. HYPOTHESES ABOUT REGRESSION	196
Exercises 9.2	199
