<i>Preface</i>	vii
<i>Introduction</i>	1
1 Sentential Logic	7
1.1 Deductive reasoning and logical connectives	7
1.2 Truth tables	13
1.3 Variables and sets	24
1.4 Operations on sets	32
1.5 The conditional and biconditional connectives	41
2 Quantificational Logic	53
2.1 Quantifiers	53
2.2 Equivalences involving quantifiers	62
2.3 More operations on sets	71
3 Proofs	82
3.1 Proof strategies	82
3.2 Proofs involving negations and conditionals	92
3.3 Proofs involving quantifiers	104
3.4 Proofs involving conjunctions and biconditionals	121
3.5 Proofs involving disjunctions	131
3.6 Existence and uniqueness proofs	141
3.7 More examples of proofs	149
4 Relations	157
4.1 Ordered pairs and Cartesian products	157
4.2 Relations	165
4.3 More about relations	174
4.4 Ordering relations	181
4.5 Closures	193

vi	<i>Contents</i>	
4.6	Equivalence relations	203
5	Functions	215
5.1	Functions	215
5.2	One-to-one and onto	224
5.3	Inverses of functions	232
5.4	Images and inverse images: a research project	240
6	Mathematical Induction	245
6.1	Proof by mathematical induction	245
6.2	More examples	251
6.3	Recursion	261
6.4	Strong induction	270
6.5	Closures again	279
7	Infinite Sets	284
7.1	Equinumerous sets	284
7.2	Countable and uncountable sets	291
7.3	The Cantor–Schröder–Bernstein theorem	297
	<i>Suggestions for further reading</i>	304
	<i>Summary of proof techniques</i>	305
	<i>Index</i>	307
