978-0-521-44986-1 - Microlocal Analysis for Differential Operators: An Introduction

Alain Grigis and Johannes Sjostrand

Table of Contents

[More information](#)

Contents

| | |
|---|-----|
| Introduction | 1 |
| 1. Symbols and oscillatory integrals | 5 |
| 2. The method of stationary phase | 19 |
| 3. Pseudodifferential operators | 27 |
| 4. Application to elliptic operators and L^2 continuity | 41 |
| 5. Local symplectic geometry I (Hamilton–Jacobi theory) | 55 |
| 6. The strictly hyperbolic Cauchy problem — construction of a parametrix | 67 |
| 7. The wavefront set (singular spectrum) of a distribution | 77 |
| 8. Propagation of singularities for operators of real principle type | 89 |
| 9. Local symplectic geometry II | 97 |
| 10. Canonical transformations of pseudodifferential operators | 107 |
| 11. Global theory of Fourier integral operators | 119 |
| 12. Spectral theory for elliptic operators | 131 |
| Bibliography | 145 |
