<i>List of contributors</i>	xii
<i>Preface</i>	xvii
 Part I: Physiology and pathophysiology of nerve fibres	
1. Ion channels in normal and pathophysiological mammalian peripheral myelinated nerve <i>J. M. Ritchie</i>	3
2. Molecular anatomy of the node of Ranvier: newer concepts <i>S. G. Waxman</i>	13
3. Delayed rectifier type potassium currents in rabbit and rat axons and rabbit Schwann cells <i>M. D. Baker</i>	29
4. Axonal signals for potassium channel expression in Schwann cells <i>T. Konishi</i>	37
5. Ion channels in human axons <i>G. Reid</i>	47
6. An <i>in vitro</i> model of diabetic neuropathy: electrophysiological studies <i>P. Grafe</i>	61
7. Autoimmunity at the neuromuscular junction <i>J. Newsom-Davis</i>	69
8. Immunopathology and pathophysiology of experimental autoimmune encephalomyelitis <i>M. P. Pender</i>	75
9. Pathophysiology of human demyelinating neuropathies <i>T. E. Feasby</i>	86
10. Conduction properties of central demyelinated axons: the generation of symptoms in demyelinating disease <i>K. J. Smith</i>	95
11. Mechanisms of relapse and remission in multiple sclerosis <i>W. I. McDonald</i>	118
12. Glial transplantation in the treatment of myelin loss or deficiency <i>J. Rosenbluth</i>	124
 Part II: Pain	
13. Human nociceptors in health and disease <i>J. Ochoa</i>	151
	ix

x		<i>Contents</i>
14.	Sensory consequences of inflammation <i>A. Iggo</i>	162
15.	Non-voluntary muscle activity and myofascial pain syndromes <i>R. H. Westgaard</i>	169
16.	Is there a mechanism for the spinal cord to remember pain? <i>W. D. Willis Jr</i>	177
17.	The neurophysiological basis of pain relief by acupuncture <i>E. Shen</i>	189
	Part III: Control of central nervous system output	
18.	Synaptic transduction in neocortical neurones <i>W. E. Crill</i>	201
19.	Cortical circuits, synchronization and seizures <i>J. G. R. Jefferys</i>	210
20.	Physiologically induced changes of brain temperature and their effect on extracellular field potentials <i>P. Andersen,</i> <i>E. Moser and V. Jensen</i>	221
21.	Fusimotor control of the respiratory muscles <i>A. Taylor and</i> <i>R. Durbaba</i>	231
22.	Cerebral accompaniments and functional significance of the long-latency stretch reflexes in human forearm muscles <i>M. J. Aminoff and D. S. Goodin</i>	241
23.	The cerebellum and proprioceptive control of movement <i>A. Prochazka, M. Gorassini and J. Taylor</i>	247
24.	Roles of the lateral nodulus and uvula of the cerebellum in cardiovascular control <i>N. Nisimaru</i>	257
25.	Central actions of curare and gallamine: implications for reticular reflex myoclonus? <i>W. Burke</i>	266
26.	Pathophysiology of upper motoneurone disorders <i>H.-J. Freund</i>	276
27.	Modulation of hypoglossal motoneurons by thyrotropin-releasing hormone and serotonin <i>A. J. Berger,</i> <i>D. A. Bayliss and F. Viana</i>	283
28.	Serotonin and central respiratory disorders in the newborn <i>G. Hilaire, D. Morin, E. Di Pasquale and R. Monteau</i>	292
29.	Are medullary respiratory neurones multipurpose neurones? <i>L. Grélot, S. Milano, C. Gestreau and A. L. Bianchi</i>	299
30.	Reflex control of expiratory motor output in dogs <i>J. R. Romaniuk, T. E. Dick, G. S. Supinski and</i> <i>A. F. DiMarco</i>	309
31.	Abnormal thoraco-abdominal movements in patients with chronic lung disease <i>M. Goldman</i>	318
32.	Respiratory rhythms and apnoeas in the newborn <i>B. Duron</i>	327
33.	Cardiorespiratory interactions during apnoea <i>C. P. Seers</i>	337

<i>Contents</i>	xi
34. Impairment of respiratory control in neurological disease <i>R. S. Howard</i>	348
35. The respiratory muscles in neurological disease <i>G. H. Mills and M. Green</i>	358
 Part IV: Development, survival, regeneration and death	
36. Axonal growth and plasticity in the adult nervous system <i>J. Diamond and A. Gloster</i>	373
37. Target dependence of motoneurones <i>I. P. Johnson</i>	379
38. Rescue of neurones cross-regenerated into foreign targets <i>J. B. Munson and H. Nishimura</i>	395
39. Development and repair of neonatal mammalian spinal cord in culture <i>J. G. Nicholls and Z. Varga</i>	405
40. Selective neuronal vulnerability in motor neurone diseases with reference to sparing of Onuf's nucleus <i>A. H. Pullen</i>	411
41. Excitotoxicity in motor neurone diseases <i>C. Krieger</i>	427
 <i>Index</i>	 436
