|  |      |
|--|------|
| Introduction .....   | xi   |
| Participants .....   | xv   |
| Non-Participant Contributors .....   | xxii |
| <b>Part 1 Transmissible diseases with long development times and vaccination strategies</b>  |      |
| Invited papers   |      |
| S. Gore <i>Overview of data analysis: diseases with long development times</i> .....   | 3    |
| J. Peto <i>HPV and cervical cancer</i> .....   | 28   |
| M. Eichner, S. Zehnder and K. Dietz <i>An age-structured model for measles vaccination</i> .....   | 38   |
| Invited Discussion   |      |
| V. Farewell .....  | 57   |
| J. Koopman .....   | 67   |
| Contributed papers   |      |
| A. Ades and D.J. Nokes <i>Piece-wise constant models to estimate age- and time-specific incidence of toxoplasmosis from age- and time-specific seroprevalence data</i> ..... | 67   |
| D. De Angelis and W.R. Gilks <i>New methodology for AIDS back calculation</i> .....  | 72   |
| S.M. Blower and A.R. McLean <i>Imperfect HIV vaccines, the consequences for epidemic control and clinical trials</i> .....   | 72   |
| M.E. Halloran, I.M. Longini Jr., C.J. Struchiner and M. Haber <i>Feasibility of prophylactic HIV-vaccine trials: some statistical issues</i> .....                           | 76   |
| W.J. Edmunds, G.F. Medley and D.J. Nokes <i>The design of immunisation programmes against hepatitis B virus in developing countries</i> .....                                | 83   |
| D. Greenhalgh and K. Dietz <i>The effect of different mixing patterns on vaccination programs</i> .....  | 86   |
| K.P. Hadeler and J. Müller <i>Optimal vaccination patterns in age-structured populations I: the reproduction number</i> .....  | 90   |
| K.P. Hadeler and J. Müller <i>Optimal vaccination patterns in age-structured populations II: optimal strategies</i> .....  | 102  |

**Part 2 Dynamics of immunity (development of disease within individuals)**

## Invited papers

M. Nowak *Evolutionary dynamics of HIV infections* ..... 117J.M.G. Taylor, W.G. Cumberland, J.P. Sy and R.T. Mitsuyasu *Statistical models for analysis of longitudinal CD4 data* ..... 127A.J.C. Fulford, A.E. Butterworth, D.W. Dunne, R.F. Sturrock and J.H. Ouma *Some mathematical and statistical issues in assessing the evidence for acquired immunity to schistosomiasis* ..... 139S. Gupta and K. Day *Virulence and transmissibility in P. falciparum malaria* ..... 160

## Invited Discussion

A.R. McLean ..... 181

A. Dobson ..... 184

G.F. Medley ..... 189

## Contributed papers

A.R. McLean and C.A. Michie *Lifespan of human T lymphocytes* .... 191R.J. de Boer and M.C. Boerlijst *Diversity and virulence thresholds in AIDS* ..... 193A.J. McNeil, S.M. Gore, R.P. Brettelle and A.G. Bird *Statistical analysis of AZT effect on CD4 cell counts in HIV disease* ..... 194J.A. Jacquez, J.S. Koopman, C.P. Simon and I.M. Longini Jr. *Modeling progression of HIV infection: staging and the Chicago MACS cohort* .. 197M.E.J. Woolhouse *The interpretation of immunoepidemiological data for helminth infections* ..... 200G.F. Medley, P. Billingsley and R.E. Sinden *The distribution of malaria parasites in the mosquito vector: consequences for assessing infection intensity in the field* ..... 204G. Hasibeder *When susceptible and infective human hosts are not equally attractive to mosquitoes: a generalisation of the Ross malaria model* .. 206J. Swinton *The dynamics of blood stage malaria: modelling strain specific and strain transcending immunity* ..... 210**Part 3 Population heterogeneity (mixing)**

## Invited papers

H.W. Hethcote *Modeling heterogeneous mixing in infectious disease dynamics* ..... 215

|  |     |
|--|-----|
| <i>Contents</i>  | vii |
| M. Morris <i>Behavior change and non-homogeneous mixing</i> .....  | 239 |
| A.M. Johnson <i>Sources and use of empirical observations to characterise networks of sexual behaviour</i> .....   | 253 |
| Invited Discussion   |     |
| S.M. Blower .....  | 263 |
| G. Hasibeder .....   | 265 |
| Contributed papers   |     |
| A.M. Downs and I. de Vincenzi <i>Per-contact probabilities of heterosexual transmission of HIV, estimated from partner study data</i> .....  | 271 |
| J.M. Hyman and E.A. Stanley <i>Heterosexual spread of HIV with biased sexual partner selection</i> .....   | 274 |
| G.P. Garnett and J. Swinton <i>Dynamic simulation of sexual partner networks: which network properties are important in sexually transmitted disease (STD) epidemiology?</i> ..... | 278 |
| M. Kretzchmar <i>The spread of an STD on a dynamic network of sexual contacts</i> .....  | 281 |
| M. Altmann <i>Network measures for epidemiology</i> .....  | 283 |
| L. Sattenspiel <i>Spatial heterogeneity and the spread of infectious diseases</i> .....  | 286 |
| J.S. Koopman <i>Data analysis for estimating risk factor effects using transmission models</i> .....   | 290 |
| H.A.M. van Druten, G.J.P. van Griensven and J. Hendriks <i>Homosexual role behaviour and the spread of HIV</i> .....   | 292 |
| D. Smith and L. Billard <i>Homogeneity tests for groupings of AIDS patient classifications</i> .....   | 297 |
| K.L. Fielding <i>Risk factors for heterosexual transmission of HIV</i> .....   | 301 |
| D. Tudor, K. Dietz and J.A.P. Heesterbeek <i>The effect of behavioural change on the prediction of <math>R_0</math> in the transmission of AIDS</i> .....                          | 304 |
| J.A.P. Heesterbeek and J.A.J. Metz <i>The saturating contact rate in epidemic models</i> .....   | 308 |
| C.P. Simon, J.A. Jacquez and J.S. Koopman <i>A Liapunov function approach to computing <math>R_0</math></i> .....  | 311 |
| M. Eichner, K.P. Hadeler and K. Dietz <i>Stochastic models for the eradication of poliomyelitis: minimum population size for polio virus persistence</i> ..                        | 315 |

**Part 4 Consequences of treatment interventions**

## Invited papers

G.F. Medley *Conflicts between the individual and communities in treatment and control* ..... 331

T. Peto *The design and analysis of HIV clinical trials* ..... 344

Z. Agur *A theory of population dynamics used for improving control of viral diseases: AZT chemotherapy and measles vaccination policy* ..... 348

J.D.F. Habbema, G.J. van Oortmarssen and A.P. Plaisier *The ONCHOSIM model and its use in decision support for river blindness control* ..... 360

## Invited Discussion

A.K. Shahani ..... 381

C. Dye ..... 386

## Contributed papers

M.G. Roberts *Hydatid disease* ..... 388

M.C.M. de Jong *Vaccines and herd immunity: consequences for vaccine evaluation* ..... 392

M.S. Chan, G.F. Medley and D.A.P. Bundy *An epidemiological approach to the evaluation of disease control strategies for intestinal helminth infections: an age structured model* ..... 395

D.J. Nokes *The control of directly transmitted infections by pulse vaccination: concepts and preliminary studies* ..... 399

D.J. Gove, A.K. Shahani, S.E. Meacock, H.H.J. van der Hoorn, R. Bailey, M.E. Ward and D.C.W. Mabey *Operational models for the prevention of blindness* ..... 402

**Part 5 Prediction**

## Invited papers

P.J. Solomon *AIDS: modelling and predicting* ..... 407

I.M. Longini J., W.S. Clark, G.A. Satten, R.H. Byers and J.M. Karon *Staged Markov models based on CD4+ T-lymphocytes for the natural history of HIV infection* ..... 439

## Invited Discussion

N.E. Day ..... 460

## Contributed papers

S.H. Heisterkamp and A.M. Downs *Short term projections by dynamic modelling in large populations: a case study in France and The Netherlands* 464

Cambridge University Press

0521453399 - Models for Infectious Human Diseases: Their Structure and Relation to Data

Edited by Valerie Isham and Graham Medley
