308

plant

cell surface, attachment of bacteria to, 86
cell wall, bacteria in run off associated with, 223
growth, rhizobacteria enhancing, 213, 215–16
root, zone of soil surrounding, see rhizosphere
plaque, dental, 267, 282–300
approximal surface, 287–8
bacteria/microbes in
genera, 283
interactions, 291–3
definition, 282–3
development/information, 284–7, 288–9
mechanism, 287–9
prevention/control, 295–6
disease and, 293–6
EM studies, 113–14, 284–7
fissure, 288
gingival crevices, 288
structure, 284–7
plasmids, polycyclic aromatic hydrocarbon-degrading genes, 187
plastic (in medical devices), biofilm formation, 255–6, 257
polycyclic aromatic hydrocarbons (PAH),
degradation/removal, 184–7
poly-d-hydroxybutyramide, 139
poly morphonuclear neutrophils (leucocytes), P. aeruginosa and, 234
in cystic fibrosis, 242–3
polyvinylidene fluoride pipeline contamination, 136
population architecture/structure, 34–7, 66
peptid, 90
porosity, determination, 105
positioning manoeuvres/mechanisms, 31, 66
potable water, see drinking water
precipitation, metal, 155, 158
predation, resistance to, 31–2
probiotics, urogenital flora and, 274–81
processing of ruminant feed, 229–30
prostatitis, chronic, 265–6
prosthecate bacteria, surface colonisation strategies, 24
prostheses (seams), biliary, blockage, 255–6, 257–8
protease inhibitors in cystic fibrosis, 243
Protochlorobacteria, wastewater treatment and, 190, 191
Pseudomonas aeruginosa
PRM2007 mutant, growth on agar, 85
struvite urolithiasis and, 264
Pseudomonas aeruginosa, 233–50
agglutination production, see agglutinate
ciprofloxacin susceptibility, 120, 126
corrosion and, 179
EM studies, 113
erpoly saccharides, rhizosphere and, 209
immune responses to biofilms of, 233–4
lung infection, see lung
oxygen consumption rates, determination, 107
spatial heterogeneity, 33
Pseudomonas fluorescens
sewage, nutrient-savaging, 30
spatial heterogeneity, 33, 34
surface colonization strategies, 25, 26, 28
Pseudomonas fragi, surface colonization strategies, 25, 28
Pseudomonas putida, competitive behaviour, 37
Pseudomonas spp., 233–50
Pseudomonas syringae, surface colonization strategies, 28
pulmonary infection, see lung
pulp wastewater treatment, 193
pure culture, see cultures
purified/contaminant-free water (biofilms in), 133–47
contamination of, 135, 135–6
case histories, 135–6, 143–4
detection, 135, 138–40
prevention, 136–8
treatment, 135, 138, 141–3
design consideration, 136–8
FDS recalls, 143–4
growth in, 134
pyrite, 158, 159
corrosion, 178–9, 179
T. fea, biofilm colonization with, 150, 152
pyrogens, bacterial, 140–1
pyrroli dine, 150
quaternary compounds, resistance to, 123
rabbit model of urinary catheter-related infection, 268–9
Raman spectroscopy, 139
RapidChek ll, 175
rat model of infection
lower urinary tract, 263, 265
P. aeruginosa in lung, 235–6, 236
reaction and diffusion, relationship between, 105–6
redox potential electrode, 109
reducent and oxidant balance of, 106–7
reporter gene technology, solid surface gene expression and, 86–7
resonance Raman spectroscopy, 139–40
resorufin-labelled probes, 74
respiratory tract infection by P. aeruginosa, 235–44
tower, 235–44
in cystic fibrosis, chronic, 239–44
laboratory animals, 235–9
upper, 240
renin–angiotensin, 223–6
reverse osmosis membranes, fouling problems with, 142
Reynolds number, 57–8
Rhizobium spp., plant cell attachment, 86
rhizodeposition, 208–9, 215
rhizosphere, 207–20
chemical interactions, 208–10
physical interactions, 210–11
ribosomal RNA probes
Protectobacteria and activated sludge studies, 191
sulphate-reducing bacteria and, 175–6
RNA, ribosomal, see ribosomal RNA
Robbins device, 102, 124
modified, antimicrobial susceptibility studies, 124
P. aeruginosa biofilms in, 234
rolling behaviour, 24
Rickettsia, 102
ruminant, 221–32
digestion, 226
digestive tract, biofilms in, 221–32
manipulation, 229–30
S fimbral adhesions, 84–5
INDEX  309

S layers, bacteria–metal interactions and, 155
salivary components, dental plaque growth influenced by, 267, 283, 284, 288–9
Salmonella spp. adhesion to epithelial cell, 86
sawdust-based ecosystem, acid mine drainage bioremediation, 161
scanning confocal laser microscopy, see confocal scanning
laser microscopy
scanning electron microscopy, 113
dental plaque, 286
sea environments, corrosion, 178
sealants, fissure, 296
seroconversion, rhodopseudomonas, 208–9
settling sections, 109–12
sediment(s), acid mine drainage-receiving, sulphate-reducing
bacteria activity, 161–2
sedimentary mineral deposits, microbes involved in formation of, 163–4
semiconductors, contamination, 133, 136
semi-solid media (bacterial responses in), 82, 84–5
liquid media compared with, 82
sequence batch reactors in wastewater treatment, 188–90
septic bacteria, 29–32
acid mine drainage and its effects on, 159
growth, see growth
surface colonization traits, 16
quest, 84–5
shear forces, 55, 137
sheets (surrounding chains of cells), bacteria–metal
interactions and, 155
shredding behaviour, 23
signal transduction, gene regulation and, 90
Simonsiella spp. on prominent tongue, 222–3
sinus infection by P. aeruginosa, 240
slide cultures, continuous-flow, 67–8
slopping, 55
sludge
activated, phylogenetic studies in samples of, 191
biliary, 253–5
sludge blanket reactors, 193
soil
ecology, rhizosphere biofilms affecting, 215
structuring, 211
zone around plant root, see rhizosphere
solid state chemist (microsat), 68–70
solid surfaces, growth on, 82–4, 86–7
cmpared with liquid media, 82–4
solitary cells, surface colonization strategies, 23–4
soluble metals and bacteria, interactions, 154–65
solute transport, 104–7
spatial heterogeneity, see heterogeneity
species (bacterial)
composition, in communities, 66
detachment and, 51–2
spectroscopic detection in purified water systems, 139–40
spittle of Oddi, biliary microbial ecology and, 252
spinning behaviour, 23
spoilage biofilms, 70–1
Staphylococcus epidemia, tobramycin susceptibility, 124, 125
starvation conditions
attachment in, 51
in purified water systems, survival, 134
static systems, 19
steady-state culture, 67–71, 101–4
batch enrichment culture vs, 71–3
steam sterilization, 142–3
steel, mild
bimetal–painted, growth in water systems on, 199–200, 201
corrosion, 176–7, 178–9
stents, biliary, blockage, 253–6, 257–8
sterilization and disinfection, purified water systems, 138
stones/calculi
biliary tract, 252–5, 257–8
urinary infection-related, 264–5
Streptococcus spp. in dental plaque, 286, 288–9, 293
Streptococcus mutans, 286, 292
glucosyltransferase expression on solid surfaces, 87
nutritional interactions with other bacteria, 293
Streptococcus sanguinis, nutritional interactions with other
bacteria, 292, 293
stress in plant root, mechanical, 210
structure (bacterial), attachment and, 50
structure (biofilm), 3–7, 13–17, 81, see also architecture
dental plaque, 284–7
heterogeneity, see heterogeneity
turbulence effects on, 60
struvite urolithiasis, 264–5
substratum and bacteria, bonding between, 52–3
succession, 37–8
sugar substrates, 296
sulphate-reducing bacteria, see sulphur-reducing bacteria
sulphide (ion), gradient, determination, 108–9
sulphide tailings, 148–70
metal–microbe interactions, 158–9
mineralized biofilms in, 148–70
physical and chemical characterization, 149–50
physical zone, 150
sulphide type, relevance to colonization, 150
sulphidogens, see sulphur-reducing bacteria
sulphur-oxidizing bacteria, positionin mechanisms, 31
sulphur-reducing bacteria (sulphate-reducing bacteria; SRB;
sulphidlactunabacter), 161–3, 171–82
acid mine drainage bioremediation and, 161–3
corrosion and, 171–82
population architecture, 34–6
sedimentary mineral deposit formation and, 164
surface(s) (bacterial)
attachment and, 50
–to-volume ratio, bacteria–metal interactions and, 155
surface(s) (biofilms on), 16–22, 23–9
attachment to/attachment from, see adhesion; attachment;
detachment
bonding to, 52–3
colonization, see colonization
generic responses to, see gene expression
growth on, see growth
 inert, see inert surfaces
 living, see living surfaces
microenvironment, see microenvironment
properties of, 80–1
structure, 54–5
surface-enhanced Raman spectroscopy, 139–40
surfactants
adhesion to plastics prevented by, 257
biocid, 142
gene expression and, 89
INDEX

surrounding medium, see medium suspended growth systems in wastewater treatment, 193–4 swimmer cells, 82, 84 sweetening agents, artificial, 296 swimmer cells, 82, 84 symbiosis in rhizosphere, 213 synergy, plant–rhizobacteria, 213 systems hydrodynamics, 19 static, 19 taps of purified water systems, 138 teeth, see caries, plaque teichoic acids, bacteria–metal interactions and, 154, 155 teichuronic acids, bacteria–metal interactions and, 154, 155 temperature attachment and, 95 dental plaque and, 284 detachment and, 56 texture, surface, 54–5 thermophilic bacteria, archaebacterial and eubacterial, economic impact, 176 Thermus aquaticus, positioning mechanisms, 31 thickness of biofilms, 20 Thiothrix ferrooxidans mineral surface colonization, 148–70 initialisation, 150–3 physiological differences in surface- vs liquid-grown, 83–4 subspecies, identification, 154 time lapse video studies of growth on semi-solid media, 85 To5271, 189, 190 tobramycin susceptibility, S. epidermis, 124, 125 tongue, ramniant, 222–3 tooth, see caries, plaque toothpastes, 296 topoisomerase I, 90 touch sensors/receptors, 126 toxins in rhizosphere, degradation, 211 transmission electron microscopy, 113, 114 biliary brown pigment stones, 254 transport of solutes, 104–7 tricarboxylic acid cycle, oxygen gradients and, 100 Trichosa, 296 turbulent flow, 56–7, 57, 58, 59–60 biofilm dynamics in, 59–60 ulcerative gingivitis, acute necrotizing, 295 ultraviolet sterilization systems, 138 urease, bacterial ramniant and, 224, 227 streptococcus ssp and, 264 urinary tract, 9, 261–81 flora, 274–81 in disease prevention, 277–9 disruption, 276 probiotics and, 274–81 recovery (post-antimicrobial therapy), 277 lower, 261–73 host defences mechanisms, 261–2 urinary tract infections, 9, 261–73, 276–9 lower, 261–73, 276–9 management, 277–9 upper, 201 urogenital tract, female, 9, 274–81 uterus, biofilm formation, 9 vaccination, see immunization vadose zone, 149, 150, 153 vaginal infection, 277 van der Waals forces, dental plaque formation and, 288 Vibrio spp., nutritional interactions with other bacteria, 292 Vibrio DW1, surface colonization strategies, 28–9 Vibrio fischeri, luminescence genes, regulation, 89 Vibrio harveyi, surface colonization strategies, 26–7 Vibrio parahemolyticus lac gene, 84, 129 surface colonization strategies, 25–6, 27–8, 29 swarming ability on agar surfaces, 84 viscosity, gene expression and, 89 viscous forces, boundary layers and, 58 viscous sublayer, 105 washout, resistance to, 31 wastewater treatment, 183–95 consortia in, 183–95 water availability in rhizosphere, 210 drinking/potable, see drinking water hot/high temperature, see hot water purified/contaminant-free, see purified water systems/supplies fluoridation, 296 pathogens in, 196–204 water activity, gene expression and, 89 Xanthomonas multiplexa colonization, 37 zoospores in rhizosphere, 212
