

Index

A

a-invariant, 105
 addition of torsion-freeness, 136
 almost complete intersections, 68
 analytic deviation, 101
 analytic independence, 34
 analytic spread, 100
 analytic type, 24
 approximation complexes, 41, 49
 asymptotic depth, 112

B

Betti numbers of symmetric algebras, 67
 Borel subalgebra, 236
 Buchberger algorithm, 257
 Burch's formula, 112

C

canonical ideal, 296
 canonical module, 105
 canonical module of the Rees algebra, 142
 Cartan complex, 238
 circular complex, 37
 Cohen-Macaulay graphs, 92
 Cohen-Macaulay type, 66
 complete ideal, 125
 complete intersection, 45
 computation of syzygies, 262
 computer proof, 220
 computing syzygies, 262
 condition R_1 , 12
 condition S_k , 12
 condition \mathcal{F}_k , 19
 content formulas, 197
 content of syzygies, 198

D

d-sequence, 34
 d-sequences and acyclicity, 55
 degree of an extension, 287

determinantal divisor, 10
 determinantal ideals, 8
 dimension of Rees algebras, 17
 dimension of symmetric algebras, 16
 direct link, 73
 divided powers algebras, 47
 divisor class group of symmetric algebras, 139
 divisorial ideal, 10
 double dual method, 297
 downgrading homomorphism, 32

E

elimination of variables, 259
 equidimensional component, 277
 equidimensional decomposition, 277, 279
 equidimensional factor, 277
 equidimensional ideal, 267
 equimultiple ideal, 101
 expected canonical module, 143
 explicit Nullstellensätze, 270
 extended prime, 16

F

f-number, 138
 factorial closure, 149
 fiber cone, 100
 finiteness of ideal transforms, 170
 Fitting ideals, 7, 268
 Forster-Swan number, 16

G

generic Cartan subalgebra, 238
 generic socle formula, 267
 geometrically linked ideals, 73
 gluing of Rees algebras, 133
 Gröbner basis, 256

H

Hilbert function of a local ring, 108

Hilbert polynomial of an ideal, 108
 homogenization, 264
 homological Nullstellensatz, 276

I

ideal of linear type, 29
 ideal quotient, 260
 ideal transform, 159
 ideals geometrically of linear type, 30
 initial Cohen–Macaulay type, 142
 initial ideal, 256
 initial term, 256
 integral closure of a birational morphism,
 304
 integral closure of a morphism, 304
 integral closure of an ideal, 125
 integrally closed ideal, 125
 invariant factors, 9
 isolated zeros, 284

J

Jacobi–Zariski sequence, 268
 Jacobian criterion for symmetric algebras,
 123
 Jacobian dual, 7, 25
 Jacobian ideal, 268

K

Kaplansky invariants, 9
 Koszul complex, 42
 Koszul homology and canonical module,
 78
 Koszul homology and even linkage, 76
 Koszul homology of reductions, 118
 Krull–Serre criterion, 12

L

Lebelt–Weyman complexes, 46
 lexicographic product of orderings, 255
 licci ideals, 76
 localization, 282

M

M–complex, 50
 M–complex of an ideal, 50
 minimal reduction, 100
 mixed graded algebra, 115
 modified Koszul complexes, 53
 module of Kähler differentials, 267
 monomial curve, 202

monomial submodule, 262

N

Noether normalization, 263
 normal form algorithm, 256
 normal Gorenstein ideals, 128
 normal ideal, 125
 normality of extended Rees algebras, 125
 normality test, 300
 normally torsion–free, 126
 normally transversal ideals, 130
 Northcott ideal, 269
 Nullstellensatz, 266

O

order ideal, 8
 orderings of monomials, 255

P

partition of the unity, 274
 primality testing, 285
 primary decomposition, 276
 primary Gorenstein ideals, 127
 proper sequence, 35

Q

quasi–Gorenstein ring, 105

R

reduction, 99
 reduction module, 101
 reduction number, 99, 100
 reduction number one, 103
 reduction number two, 104
 relation type, 30
 relative regular sequence, 34
 residual intersection, 73
 residually Cohen–Macaulay, 87
 reverse lexicographic order, 255
 ring of endomorphisms, 261

S

Sally module, 101
 saturation of an ideal, 260
 Scheja–Storch’s formula, 268
 second deviation, 101
 sliding depth, 58
 socle of an algebra, 266
 special fiber, 100
 standard monomials, 256

- Stanley–Reisner ideal, 18
strongly Cohen–Macaulay ideals, 58
symbolic square algebra, 216
syzygetic ideal, 30
syzygetic torsion, 222
- T**
tangent cone, 100
term ordering, 255
top Koszul homology of reductions, 113
top of a system of equations, 284
trace ideal, 303
trace rings, 303
transversal ideals, 130
triangular sets, 275
twisted conormal module, 81
type of the Rees algebra of a reduction, 117
- U**
unmixed ideal, 267
unmixedness test, 279
- V**
Valabrega–Valla module, 102
valuative dimension, 17
venerable socle formula, 266
vertex covering number, 95
- W**
weight vector, 255
Wu–Ritt sequence, 275
- Z**
Z–complex, 50
Z–complex of a module, 52
Z–complex of an ideal, 50
