Foreword

Introduction	1
1 Krull Dimension	7
1.1 Fitting Ideals	7
1.2 The Forster–Swan Number	16
1.3 Dimension Formulas	19
1.4 Irreducibility and Reducedness	23
1.5 Modules with Linear Presentation	25
2 Syzygetic Sequences	29
2.1 Syzygetic Ideals	30
2.2 Residual Conditions	32
2.3 Proper Sequences and d -Sequences	34
2.4 Determinantal Ideals of Linear Type	37
3 Approximation Complexes	41
3.1 Generalized Koszul Complexes	42
3.2 Construction of the Approximation Complexes	49
3.3 Acyclicity Criteria	55
3.4 Modules of Projective Dimension Two	68
4 Linkage and Koszul Homology	73
4.1 Elementary Properties of Linkage	74
4.2 Invariants of Linkage	76
4.3 Residual Intersections	84
4.4 Koszul Homology of Trees	92
5 Arithmetic of Rees Algebras	99
5.1 Reduction Modules	100
5.2 Hilbert Functions of Local Rings	108
5.3 Koszul Homology of Reductions	112
5.4 Jacobian Criteria	123
5.5 Construction of Rees Algebras	130
5.6 The f -Number of a Module	137
5.7 The Canonical Module	142

CONTENTS

6	Factoriality	149
6.1	The Factorial Conjecture	150
6.2	Homological Rigidity	152
6.3	Regular Primes	154
6.4	Canonical Modules	157
7	Ideal Transforms	159
7.1	Factorial Closure	159
7.2	Symbolic Power Algebras	166
7.3	Finiteness of Ideal Transforms	170
7.4	Modules with Linear Presentation	175
7.5	Modules with Second Betti Number One	179
7.6	Analytically Independent Elements	188
8	The Equations of Rees Algebras	195
8.1	Almost Complete Intersections	197
8.2	Codimension Two	207
8.3	Higher Codimension	221
8.4	Ideals with Linear Presentation	224
9	Commuting Varieties of Algebras	231
9.1	The Jacobian Module of an Algebra	232
9.2	Complete Intersections	234
9.3	Semisimple Lie Algebras	237
9.4	Commuting Zoo	247
10	Computational Methods in Commutative Algebra	253
10.1	Generalized Division Algorithms	254
10.2	Basic Methods	259
10.3	Nullstellensätze	266
10.4	Primary Decomposition	276
10.5	Ideal Transforms	290
10.6	Integral Closure	293
	Bibliography	309
	Index	327
