
Index

- Adamian, Arov and Krein; their theorem 150
 approximate identity property 72
 atom 188, 195
 atom of $\mathfrak{RH}_1(|z| < 1)$ 195, 241
 atom of $\mathfrak{RH}_1(\Im z > 0)$ 188
 atomic decomposition 188, 223, 241, 242

 Baire category theorem, use of 25, 201, 275
 Beurling's theorem (on invariant subspaces) 79, 121, 162, 167
 Blaschke product 65, 68, 69, 70, 76, 83, 84, 85, 120, 137, 152, 157
 BMO (space) 169, 217
 Bonenblust–Sobczyk theorem: its use 216
 boundary value function 15
 boundary value, non-tangential 11, 57
 bounded mean oscillation 215, 217
 Burkholder, Gundy and Silverstein; their theorem 182

 Calderón–Zygmund decomposition 192, 196, 237
 Carathéodory's theorem (on conformal mapping) 36, 40, 52, 63
 Carleson index 267
 Carleson measures 197, 201, 202, 206, 209, 223, 229, 230, 244, 251, 256, 257, 260, 261, 262, 269
 Carleson property 211
 Carleson's theorem 205, 207, 263
 Cauchy principal value 24, 58, 87, 129
 Cauchy's formula: functions in H_1 35
 Coifman's theorem 194
 conjugate Poisson kernel 18
 connectivity, simple 36
 contiguous intervals 29, 60
 convolution 135
 corona theorem (of Carleson) 253, 258

 distribution function 92, 170

 entire function of exponential type 132

 Fatou's construction 159, 163
 Fatou's theorem 11
 Fatou's theorem (on a.e. existence of boundary values) 57
 Fefferman and Stein; their theorem 186, 251
 Fefferman's theorem 240, 241, 243, 247
 Fefferman's theorem: with Garsia's norm 227, 240
 Fourier transform 131
 Frostman's theorem (on uniform approximation by Blaschke products) 85, 157

 Garnett's theorem 211
 Garsia's norm 221
 Gelfand's theorem (on complete normed fields) 253
 Green's theorem, use of 223, 224, 233, 257

 H_1 (space) 34ff
 H_p 68
 H_p (space) for upper half plane 112
 H_∞ (space) 83
 H_∞ (space) for upper half plane 114
 Hardy's theorem (on domains with rectifiable boundary) 55
 Hardy–Littlewood maximal function 172, 188
 Hardy–Littlewood maximal theorem 172, 174, 176
 harmonic conjugate 1, 16ff, 87, 88, 89, 108, 109, 122, 163, 215
 harmonic conjugate, boundary behaviour of 16ff
 harmonic extension U_ϕ of ϕ to unit circle 221
 Harnack's theorem 13, 212
 Hausdorff–Young theorem 130
 Helson–Szegő measure 163, 166
 Hilbert transform 88, 104, 129
 homomorphisms: of the algebra H_∞ onto \mathbb{C} 252

- inner factor 74, 119, 120, 155
 inner function 82, 83, 84, 152, 153
 interpolating sequence 200, 201, 205, 210, 211, 254
 invariant subspaces 81
- Jensen's formula 66, 67
 Jensen's inequality 75
 John–Nirenberg theorem 236
 Jones' interpolation formula 264
 Jordan curve argument 37, 38, 39, 40
 Jordan curve theorem 36, 40, 42
- Kellogg's theorem 103
 Kolmogorov's theorem 92
 Kolmogorov's theorem (for $0 < p < 1$) 98
- Lebesgue set 19
 Lebesgue's theorem (on differentiation) 15, 173, 236
 Lindelöf's first theorem on conformal mapping 40ff
 Lindelöf's second theorem (on conformal mapping) 48
- Marcinkiewicz interpolation 94, 174, 175
 Marshall's theorem 157
 maximal function, Hardy–Littlewood 172, 188
 maximal function, non-tangential 178, 179, 194, 197
 maximal function, radial 186
 maximal Hilbert transform 181
 maximal ideal space \mathfrak{M} of H_∞ 253
 maximal ideal: in H_∞ 252ff
- Nirenberg and John; their theorem 235
 non-tangential 15
 non-tangential boundary value 11, 57
 non-tangential convergence 11
 non-tangential limit 11, 46
 non-tangential maximal function 178, 179, 194, 197
- outer factor 78, 119, 120, 152, 155
- Paley–Wiener theorem 132, 134, 135
 Phragmén–Lindelöf theorem 132
 Plancherel's theorem 131
 Poisson formula 2, 117, 153, 221
 Poisson kernel 3, 5, 7, 16, 126
 Poisson kernel, conjugate 17, 126
- Poisson kernel: approximate identity property 8, 35
 Poisson representation: for functions harmonic in a disk 2
 Poisson representation: for harmonic functions with bounded L_p means 3ff
 Privalov's construction 59ff, 62
 Privalov's theorem (on Lipschitzian functions) 100
 Privalov's uniqueness theorem 62
- radially bounded measure 243, 247
 regular functional 273
 rich (subset of L_∞) 272, 277
 Riemann mapping theorem 35
 Riesz theorem, F. and M. 28ff, 72, 115, 116, 142, 149, 158, 160, 216, 226
 Riesz' theorem, M. 94, 128
- Sarason's theorem 148
 Shapiro and Shields; their theorem 207
 simple connectivity 36
 Smirnov's theorem 74
 Smirnov's theorem: generalization 79
 supporting interval 135
 Szegő's theorem 161, 164
- Titchmarsh's convolution theorem 138
- unimodular functions 152
- Vinogradov's characterization (of Carleson measures) 269
 Vinogradov–Senichkin test 269
- w-convergent (sequence) 272
 weakly complete (normed space) 272, 277
 weakly convergent (sequence) 271
 weakly convergent in itself (sequence) 271
 Wolff's lemma 256
- Zygmund's $L \log L$ theorem 96
 Zygmund's theorem (converse) 97
 Zygmund's trick 72, 73, 80
