Preface to the second edition		xi
Preface to the first edition		xiii
I Functions harmonic in $z < 1$. Rudiments		1
A <i>Power series representation</i>		1
B <i>Poisson's formula</i>		2
C <i>Poisson representation of harmonic functions belonging to various classes</i>		3
D <i>Boundary behaviour</i>		5
1 <i>Integrability properties of harmonic functions given by Poisson's formula</i>		5
2 <i>Elementary study of boundary behaviour</i>		7
3 <i>Deeper study of boundary behaviour. Non-tangential boundary values and Fatou's theorem</i>		10
<i>Problem 1</i>		14
E <i>The harmonic conjugate</i>		16
1 <i>Formula for the harmonic conjugate</i>		17
2 <i>Behaviour of harmonic conjugate near an arc where the original boundary data function has a continuous derivative</i>		18
<i>Problem 2</i>		18
3 <i>Radial boundary behaviour of harmonic conjugate near points of original boundary data function's Lebesgue set</i>		19
4 <i>Existence of $\tilde{f}(\theta)$ for f in L_2. Discussion</i>		21
5 <i>Existence of $\tilde{f}(\theta)$ really due to cancellation. Example</i>		25
II Theorem of the brothers Riesz. Introduction to the space H_1		28
A <i>The F. and M. Riesz theorem</i>		28

1	<i>Original proof</i>	28
2	<i>Modern Helson and Lowdenslager proof</i>	31
B	<i>Definition and basic properties of H_1</i>	34
1	<i>Poisson representation for functions in H_1</i>	34
2	<i>L_1 convergence to boundary data function</i>	35
3	<i>Cauchy's formula</i>	35
C	<i>Digression on conformal mapping theory</i>	35
1	<i>Carathéodory's theorem on continuity of the conformal mapping function up to a Jordan curve boundary</i>	36
2	<i>Lindelöf's theorem on the behaviour of conformal mapping function near a point of tangency of the boundary</i>	40
3	<i>When the boundary curve has a continuously turning tangent</i>	46
D	<i>Domains bounded by rectifiable Jordan curves</i>	52
1	<i>Derivative of conformal mapping function is in H_1</i>	53
2	<i>Image of a set of measure zero on unit circumference</i>	53
3	<i>Taylor series for the conformal mapping function is absolutely convergent up to the unit circumference</i>	54
	<i>Problem 3</i>	56
III	Elementary boundary behaviour theory for analytic functions	57
A	<i>A.e. existence of finite non-tangential boundary values</i>	57
B	<i>Uniqueness theorems for H_1 functions</i>	57
C	<i>More existence theorems for boundary values</i>	58
1	<i>Functions with positive real part</i>	58
2	<i>Existence of $\tilde{F}(\theta)$ for F in L_1</i>	58
D	<i>Privalov's uniqueness theorem</i>	59
1	<i>Privalov's ice-cream cone construction</i>	59
2	<i>Use of Egoroff's theorem</i>	61
3	<i>Proof of Privalov's theorem</i>	62
E	<i>Generalizations of the Schwarz reflection principle</i>	63
1	<i>Schwarz reflection across an arc of unit circle for H_1 functions</i>	63
2	<i>A theorem of Carleman</i>	64
	<i>Problem 4</i>	64
IV	Application of Jensen's formula. Factorization into a product of inner and outer functions	65
A	<i>Blaschke products</i>	65
1	<i>Criterion for convergence</i>	65
2	<i>Boundary value is almost everywhere of modulus 1</i>	66

B	<i>Factorizing out Blaschke products</i>	67
1	<i>Possibility of forming a Blaschke product having same zeros as a given function analytic in unit circle</i>	67
2	<i>The class H_p, $0 < p < \infty$. Factorization</i>	68
C	<i>Functions in H_p, $0 < p < \infty$.</i>	70
1	<i>Boundary data function. Norm</i>	70
2	<i>Convergence in mean to the boundary data function. Third proof of the F. and M. Riesz theorem</i>	71
3	<i>Smirnov's theorem</i>	74
D	<i>Inner and outer factors</i>	74
1	<i>Lemma on absolute continuity</i>	74
2	<i>$\log F(re^{i\theta})$ has bounded means if $\log^+ F(re^{i\theta})$ does</i>	75
3	<i>Expression of an analytic function in terms of its real part</i>	75
4	<i>Factorization into inner and outer factors</i>	76
E	<i>Beurling's Theorem</i>	78
1	<i>Approximation by polynomials</i>	78
2	<i>Generalization of Smirnov's theorem</i>	79
3	<i>Beurling's theorem in H_p</i>	79
F	<i>Invariant subspaces</i>	81
	<i>Problem 5</i>	83
G	<i>The space H_∞. Frostman's theorem on the uniform approximation of inner functions by Blaschke products</i>	83
V	Norm inequalities for harmonic conjugation	87
A	<i>Review. Hilbert transforms of L_2 functions</i>	87
B	<i>Hilbert transforms of L_p functions, $1 < p < \infty$</i>	88
1	<i>An identity</i>	88
2	<i>Riesz' theorem that \tilde{f} belongs to L_p for f in L_p, $1 < p < \infty$</i>	88
C	<i>$\tilde{f}(\theta)$ for f in L_1</i>	92
1	<i>Definition of $m_h(\lambda)$. Kolmogorov's theorem</i>	92
2	<i>Second proof of Riesz' theorem about \tilde{f} for f in L_p based on Kolmogorov's theorem and Marcinkiewicz interpolation</i>	94
3	<i>Zygmund's $L \log L$ theorem</i>	
4	<i>Converse of Zygmund's $L \log L$ theorem for positive f</i>	96
5	<i>Another theorem of Kolmogorov</i>	98
D	<i>$\tilde{f}(\theta)$ for bounded or continuous and periodic $f(\theta)$</i>	99
1	<i>Integrability of $\exp \lambda \tilde{f}$</i>	99
2	<i>Case of continuous periodic f</i>	100
E	<i>Lipschitz classes</i>	100

F	<i>Return to conformal mapping</i>	101
VI	H_p spaces for the upper half plane	106
A	<i>Poisson's formula for the half plane</i>	106
B	<i>Boundary behaviour</i>	109
C	<i>The H_p spaces for $\Im z > 0$</i>	112
D	<i>Riesz' theorems for the Hilbert transform</i>	121
E	<i>Fourier transforms. The Paley–Wiener theorem</i>	130
F	<i>Titchmarsh's convolution theorem</i>	135
	<i>Problem 6</i>	138
VII	Duality for H_p spaces	140
A	<i>H_p spaces and their duals. Sarason's theorem</i>	140
	1 <i>Various spaces and their duals. Tables</i>	140
	2 <i>Approximation by H_p functions. Duality method of Havinson and of Rogosinski and Shapiro</i>	143
	3 <i>Sarason's theorem on norm closure of $\mathcal{C} + H_\infty$</i>	148
B	<i>Elements of constant modulus in cosets of L_∞/H_∞. Marshall's theorem</i>	150
	1 <i>A result of Adamian, Arov and Krein</i>	150
	2 <i>Marshall's theorem. Unit sphere of H_∞ the norm-closed convex hull of Blaschke products</i>	152
C	<i>Szegő's theorem</i>	158
D	<i>The Helson–Szegő theorem</i>	163
	<i>Problem 7</i>	169
VIII	Application of the Hardy–Littlewood maximal function	170
A	<i>Use of the distribution function</i>	170
B	<i>The Hardy–Littlewood maximal function</i>	172
	1 <i>Theorem of Hardy and Littlewood proved by Riesz' construction</i>	172
	2 <i>Norm inequalities for the Hardy–Littlewood maximal function f^M</i>	174
	3 <i>Criterion for f^M to be integrable on sets of finite measure. Stein's theorem</i>	175
C	<i>Application to functions analytic or harmonic in the upper half plane, or in unit circle</i>	177
	1 <i>Estimate of Poisson's integral in terms of f^M</i>	177
	2 <i>The non-tangential maximal function $F^*(x)$, $-\infty < x < \infty$</i>	178
	3 <i>The non-tangential maximal function $f^*(\theta)$, $-\pi \leq \theta \leq \pi$</i>	180
	4 <i>The maximal Hilbert transform</i>	181
D	<i>Maximal function characterization of \mathfrak{RH}_1</i>	181

1	<i>Theorem of Burkholder, Gundy and Silverstein</i>	182
2	<i>Characterization of \mathfrak{RH}_1 in terms of the radial maximal function</i>	185
3	<i>Discussion</i>	187
E	<i>Atomic decomposition in \mathfrak{RH}_1</i>	188
1	<i>Discussion of $\mathfrak{RH}_1(\Im z > 0)$</i>	188
2	<i>Consideration of $\mathfrak{RH}_1(z < 1)$</i>	194
F	<i>Carleson measures</i>	197
	<i>Problem 8</i>	199
IX	Interpolation	200
A	<i>Necessary conditions</i>	200
1	<i>Uniformity lemma</i>	200
2	$\prod_{k \neq n} (z_n - z_k / z_n - \bar{z}_k)$ <i>must be bounded below</i>	201
B	<i>Carleson's theorem</i>	201
1	<i>Computational lemma</i>	201
2	<i>A Carleson measure</i>	202
3	<i>Proof of Carleson's theorem</i>	205
C	<i>Weighted interpolation by functions in H_p. Theorem of Shields and Shapiro</i>	207
D	<i>Relations between some conditions on sequences $\{z_n\}$</i>	209
E	<i>Interpolation by bounded harmonic functions. Garnett's theorem</i>	211
	<i>Problem 9</i>	214
X	Functions of bounded mean oscillation	215
A	<i>Dual of $\mathfrak{RH}_1(0)$</i>	215
1	<i>An identity</i>	215
2	<i>Real linear functionals on $H_1(0)$</i>	216
B	<i>Introduction of BMO</i>	217
1	<i>Definition of BMO</i>	217
2	<i>If ϕ and ψ are bounded, $\phi + \tilde{\psi}$ is in BMO</i>	218
C	<i>Garsia's norm</i>	221
1	<i>Definition of $\mathfrak{N}(\phi)$</i>	221
2	<i>Two simple inequalities for $\mathfrak{N}(\phi)$</i>	221
3	<i>Where we are heading</i>	223
D	<i>Computations based on Green's theorem</i>	224
1	<i>Some identities</i>	224
2	<i>P. Stein's expression of the H_1 norm as a double integral</i>	225

3	<i>Various ways of expressing the fact that $F(\theta)$ generates a linear functional on $\mathfrak{RH}_1(0)$</i>	225
E	<i>Fefferman's theorem with the Garsia norm</i>	227
1	<i>Use of Schwarz' inequality</i>	228
2	<i>A measure to be proved Carleson</i>	228
3	<i>Main lemma</i>	229
4	<i>Fefferman's theorem with $\mathfrak{R}(F)$</i>	234
F	<i>Fefferman's theorem with the BMO norm</i>	235
1	<i>Theorem of Nirenberg and John</i>	235
2	<i>Equivalence of BMO and Garsia norms</i>	238
3	<i>Fefferman's theorem</i>	240
G	<i>Alternative proof, based on the atomic decomposition in \mathfrak{RH}_1</i>	241
H	<i>Representation of BMO functions in terms of radially bounded measures</i>	243
1	<i>Radially bounded measures. They generate linear functionals on $\mathfrak{RH}_1(0)$</i>	243
2	<i>All linear functionals on $\mathfrak{RH}_1(0)$ are generated by radially bounded measures</i>	246
	<i>Problem 10</i>	251
XI	Wolff's proof of the corona theorem	252
A	<i>Homomorphisms of H_∞ and maximal ideals</i>	252
B	<i>The $\bar{\partial}$-equation</i>	255
C	<i>Proof of the corona theorem</i>	258
Appendices by V.P. Havin		
	Appendix I. Jones' interpolation formula	263
1	<i>The formula</i>	263
2	<i>Discussion</i>	266
	Appendix II. Weak completeness of the space $L_1/H_1(0)$	271
1	<i>Notion of weak completeness</i>	271
2	<i>General result</i>	272
3	<i>Verification of properties I–IV for H_∞</i>	276
	Postscript	278
	Bibliography	279
	Index	286
