The archaeology of classical Greece developed in the shadow of Greek historical scholarship, and it has restricted itself too modestly to the study of individual artefacts. A wide variety of modern developments in archaeology have been neglected. The contributors to this book review the history of the field and aim to demonstrate that modern archaeological approaches can contribute to a richer understanding of Greek society. They also insist that this complex, literate and highly unusual system of states poses important questions for archaeologists of other regions.

This book has been a long time in the making. Peter Richards and Colin Renfrew suggested the possibility of a *New directions* book on the social and economic dimensions of classical archaeology in 1988. Since then it has been through a lot of changes, and I want to thank the contributors for their patience with these. Most of the papers have been circulated between the contributors, and the process of mutual criticism has greatly strengthened the final results. These exchanges of ideas are acknowledged at the end of each paper. I also want to thank the contributors for enduring my editorial interventions and idiosyncrasies with good humour; to thank the University of Chicago for supporting the expenses of sending bulky typescripts and long faxes across the Atlantic; and above all to thank Frances Brown, Jessica Kuper, Jayne Matthews and Ruth Parr for struggling heroically with a messy and difficult typescript.
