- absolutely irreducible polynomial, 325–7
adjacency matrix or operator, 6, 50–1, 70, 83, 86, 115, 177, 213, 257, 313, 316, 324, 329–32, 351–2, 357, 361, 409–11, 417
adjacency matrix for permutation group, 316
 $\text{Aff}(q)$, affine group, 240, 272–7, 280–92, 393, 306
algebraic number field, 390
almost conjugate subgroups, 390
Alon–Boppana Theorem, 81
alternating group, A_n , 7, 54, 266, 363
Artin conjecture, 22–4
Artin L -function, 238, 279
associated spherical function, 350
association scheme, 94, 186, 303, 342, 352
- ball (Hamming), 189
ball in $\mathbb{Z}/n\mathbb{Z}$, 47, 72
band-limiting operator, 228
basis of vector space, 6
benzene, 217–21, 222
Bessel function, 76, 304, 329–41
bipartite graph, 54, 72, 178
block diagonalization of left (or right) regular representation, 262, 284, 356–7
Boolean algebra, 207–11
Boolean function, 207–11
Borel subgroup, 366, 371
Bruhat decomposition, 371
buckyball, 49, 54, 220–2, 361
- calculus of variations, 215
Can you hear the shape of a drum?, 81, 221, 386, 388–9
Carmichael numbers, 19
Cauchy–Schwarz inequality, 32, 78
Cayley graph, 10, 46, 58, 71–4, 79, 97, 177, 212–13, 283–6, 317, 357, 408
Cayley’s theorem, 242
center of a group, 265, 306, 366, 396, 403
center of group algebra, 258
central limit theorem, 112
central terms in the trace formula, 396, 403
centralizer of an element of a group, 365, 402
centralizer ring of a permutation group, 316
centroid, 121
change of basis, 242
character, 35, 167, 251, 260, 271–2
character sum estimate, 325
character table, 254, 260, 264, 274, 363, 369, 383–4
characteristic of a field, 61
characteristic polynomial, 53
chemistry, 217–22
Chinese remainder theorem, 12–15, 18
circulant matrix, 50, 60
class function, 258
code (binary linear), 188, 187–96, 202–4
collapsed adjacency matrix, 182–6, 342, 354
combinatorial Laplacian, 51, 83, 88, 114–16
commutator subgroup, 282
comparison of finite Euclidean and non-Euclidean graphs, 361
complete graph, 58, 66, 107
complete orthogonal set, 40, 69, 74, 89
complete reducibility theorem, 247
complexity of a graph, 419–20
concert hall ceilings, 147–8
congruence, 7–8
congruence subgroup of modular group, 313–14
conjugacy class, 246, 273, 294, 365–6, 382, 396, 402
conjugate, 305
continuity of DFT, 111
convolution, 26, 33–5, 51, 85, 110, 168, 201, 245, 342, 348, 402
cryptography, 11, 28

- cube, 363
cyclic code, 189, 202
cyclic Galois group, 64
cyclic group, 5, 19, 62, 64, 318
cyclic shift, 189
- Dedekind zeta function, 390
degree of a vertex of a graph, 49
degree or dimension of a representation, 249
density, 109
derived polygon, 121
derived subgroup, 282
DFT on $\mathbb{Z}/n\mathbb{Z}$, 35–45
DFT on finite abelian group, 167–75
diameter of a graph, 49, 70, 77
Dido's problem, 124–25
difference operator, 114
digital signal processing, 151
digital spectral analysis, 155–60
dihedral group, 265
dilation operator, 45, 288
dilation property of DFT, 45
direct product of finite abelian groups, 171
direct product of groups, 24, 265
direct sum of representations, 250, 256–7, 280, 284
direct sum of rings, 13
Dirichlet L -function, 141
discrete analogue of Weyl theorem on uniform distribution, 150
discrete Fourier transform, 30–1, 35–45, 121, 132, 167–8
discrete logarithm, 130
discrete series representation of $GL(2, \mathbb{F}_q)$, 370–4
discrete spectrum of Δ on $L^2(\Gamma/H)$, 396–7
distance-regular graph, 186
distribution (probability), 109
distribution of eigenvalues, 87, 92, 358–9, 397–8
dodecahedron, 315–6
drums, 88, 385–90
dual $H^\#$ in G , 198, 199
dual group \hat{G} , 37, 167, 172, 198, 250
dual representation, 250
dyadic time, 175
- Ehrenfest urn model, 213–14
eigenfunction, 59, 69, 89, 115, 181–6, 213, 324, 329–31, 341–3, 355, 379
eigenfunctions = eigenvalues, 185, 344
eigenfunction of Δ , 115, 304, 341–2, 386, 395–9
eigenfunction of mean-value operators, 185, 343
eigenfunctions' level curves, 88, 93–4, 359–60
eigenvalue, 6, 52
eigenvalue distribution or histogram, 92, 358–9
eigenvalue of finite upper half plane graph, 313, 323, 338–9, 353–60
eigenvalues of adjacency operators, 54–9, 70–82, 86–92, 177–186, 212–3, 219, 313, 323, 338–9, 353–60
eigenvector, 6, 52, 353, 355
elementary divisor theory, 166
elementary row and column operations, 164
elliptic conjugacy classes in $GL(2, \mathbb{F}_q)$, 366, 405–7
elliptic terms in trace formula, 405–7
energy, 219
equidistribution, 149–50
equivalence class, 8
equivalent norms, 104
equivalent representations, 343
error-correcting code, 11, 76, 187–96
euclidean "distance", 83
euclidean graph, 83, 86, 91, 96
euclidean group (finite), 84
euclidean n -space, 83
Euler–Lagrange equations, 215
Euler phi function, 17–19, 63
Euler product, 305, 390, 399
Euler's criterion, 130
expansion constant of a graph, 55–58, 78, 80
expected value, 108
exponential sum estimate, 75, 91, 325
exterior power representation, 250
- fast Fourier transform (FFT), 30–1, 151–60
feedback shift register, 64
Fermat's little theorem, 19
field, 5
field automorphism, 64
finite circle, 7, 9, 11, 20, 21, 37, 46, 71, 98–107, 111, 327
finite difference operator, 114
finite euclidean graph, 83–96, 107, 361
finite field, 6, 12, 61–7
finite orthogonal group, K , 306, 365, 369, 381–3
finite Poincaré "distance", 311, 400
finite power function, 324
finite symmetric space, 307–8
finite torus, 15, 17, 161–2, 364, 383
finite upper half plane, 96, 305–6, 361, 400–1
finite upper half plane graph, 312–16, 400–1
fixed point formula, 247
Fourier analysis on finite group G , 10, 30, 257–63
Fourier analysis on symmetric space G/K , 360

- Fourier analysis on double coset space
 $K \backslash G / K$, 346–7
- Fourier inversion, 69, 258, 263
- Fourier series, 11, 52, 409
- Fourier transform, 11, 35, 37, 261
- Fourier transform on \mathbb{R} , 198, 223
- fractional linear transformation, 304, 306
- frequency of vibration, 217
- Fresnel diffraction patterns, 93
- Frobenius automorphism, 64, 305
- Frobenius formula for induced character, 271
- Frobenius map, 64
- Frobenius norm, 229
- Frobenius reciprocity law, 277–8, 345, 392
- functional equations of Ihara zeta function, 419
- fundamental group of graph, 408, 417
- fundamental solution, 118–19
- fundamental theorem of abelian groups, 24, 163–7
- \hat{G} , dual space, 37, 250, 374–5
- \hat{G}^K , 346, 375
- Galois group, 64, 238, 305, 317, 390
- gamma function, 90, 149
- Gauss distribution or density, 116
- Gauss hypergeometric function, 178
- Gauss sum, 44, 90, 133, 137, 142–7, 149–50, 332–3
- Gelfand criterion, 307–9
- Gelfand pair, 181, 307–9
- geodesic-reversing isometry, 304
- geometric progression, 39
- geometric series for matrices, 233
- generating function, 179
- generators of a group, 5, 19, 46, 371
- generator polynomial for a code, 190
- girth of a graph, 49, 70–1, 73, 76
- general linear group, $GL(V)$, $GL(n, K)$, 7, 238–40, 242, 305–7, 362–84, 394–407
- Golay code, 192, 195
- graph, 6
- group, 5
- group algebra or ring, 34, 245
- group determinant, 237, 266
- group representation, 2, 242
- H_q , finite upper half plane, 305–6, 361, 400–1
- Hadamard matrix, 172
- Hadamard transform, 192
- Hamiltonian cycle, 82
- Hamilton's principle of least action, 215
- Hamming code, 190–1, 195
- Hamming graph, 175, 188
- Hamming weight (distance), 176, 188
- Harish–Chandra's integral formula for spherical functions, 355, 395
- heat kernel, 116–20, 407, 409
- Hecke algebras, 304, 307–8
- Hecke operator, 304–5, 342, 399
- Heis(q), Heisenberg group, 240, 293–301
- Heisenberg uncertainty principle, 127, 223–36, 293, 299–300
- highly regular graph, 182, 353–5
- Hilbert space, 7, 31, 39–40, 257–8, 263, 409
- histogram of eigenvalues, 92, 358–9
- homomorphism, 5
- Hooke's law, 215
- horocycle transform, 296, 404, 415
- Hückel theory, 219–22
- hyperbolic conjugacy class in $GL(2, \mathbb{F}_q)$, 366, 404
- hyperbolic conjugacy class in $SL(2, \mathbb{Z})$, 396
- hyperbolic element of Γ for tree, 415–7
- hyperbolic term in trace formula, 397, 405
- hypercube, 175–86
- icosahedral group, 266, 363
- Ihara zeta function, 57, 417–20
- independent random variables, 110
- induced representation, 267–80, 295–7, 367, 391
- induction in stages, 278–9
- inner product, 7, 31, 52, 167, 244–5, 247–8, 251–3, 257, 263, 268, 348
- intertwining operators, 248
- inversion for DFT, 36, 39–40, 168
- inversion of Fourier transform, 36, 39–40, 168, 258
- inversion of spherical transform, 347–8, 402
- inversion of wavelet transform, 289–91
- irreducible representation, 243
- Ising model, 204–6
- isomorphism of graphs, 47
- isoperimetric inequality, 124
- isospectral nonisomorphic graphs, 385–93
- isospectral nonisometric Riemannian manifolds, 398
- Jacobi symbol, 131, 139, 140
- joint probability distribution, 109
- k - and K -Bessel functions (finite), 76, 330–41
- Kac–Bochner question: Can you hear the shape of a drum?, 81, 221, 385–90
- Kloosterman sum, 75, 76–7, 90, 91, 96, 330, 339, 372
- Kramers–Wannier duality, 205
- Krawtchouk polynomial, 178–9, 186, 194
- $L^2(G)$, 7, 31, 238, 257
- LA rainfall, 156–60

- Lagrangian, 215
 Landsberg–Schaar reciprocity law, 144
 Laplacian, 88, 395
 lattice, 205
 Lechner's theorem on prime implicants, 210
 left regular representation, 246, 256–7
 Legendre function, 342, 395
 Legendre symbol, 44, 129, 200, 340
 length spectrum for Γ/H , 397
 level curves of eigenfunctions, 92–4, 359–60
 level spacing distribution, 87, 96
 L -function, 141, 238, 279, 305
 lift of a representation, 250
 limit theorem for sums of random variables on $\mathbb{Z}/n\mathbb{Z}$, 112
 linear map, 6
 list density plots of finite Poincaré “distance”, 359–60
 little group method, 282
 Lloyd's theorem on perfect codes, 193–4
 logarithm (discrete), 63–4, 130
 logic circuits, 207–11
- Mackey–Wigner little group method, 282
 MacWilliams identities, 202–4
 Markov chain, 97–109
 Markov transition matrix, 98, 99, 106, 213–14
 Maschke's Theorem, 247
 massive subgroup, 303
 matrix entries of a representation, 2, 242, 270
 matrix of a linear transformation, 6
 matrix norm, 228
 maximum principle for eigenvalues, 80
 mean-value operator, 185, 343, 352
 Mellin transform, 396
 metric, 31
 Möbius function, 26, 148
 Möbius inversion formula, 26, 27
 modular forms, 304, 396
 modular group, $SL(2, \mathbb{Z})$, 304, 313, 365, 395–7
 monomial character, 279
 Moore–Penrose generalized inverse, 72
 motions of a regular figure, 238, 265–6, 363
 multiplicative function, 18, 19, 26
 multiplicity of an irreducible representation in another representation, 254
- Newton's laws of motion, 215
 nilpotent group, 282, 293–4
 nodal lines of an eigenfunction of the Laplacian, 88
 nondecomposable character, 370
 noneuclidean geometry, 304, 396
 nonlinear codes, 195–6
- norm in extension of finite fields, 65, 305, 365
 norm of a hyperbolic element of the modular group, 396
 norm of ideal in a number field, 390
 norm of a matrix, 228–30
 norm on a vector space, 31, 104, 228–30
 number field, 61, 390
- octahedron, 312–3
 operator norm, 229
 orbital sum, 403
 order of a group element, 5, 20
 orthogonal complement space, 247
 orthogonal group, 7, 84, 304, 306, 395, 400
 orthogonal projection, 231
 orthogonal vectors, 32
 orthogonality of k -Bessel functions, 334
 orthogonality relations, 38, 169, 251, 348
- Paley graph, 79
 parabolic conjugacy class in $GL(2, \mathbb{F}_q)$, 366
 Parseval's equality, 36, 40, 105, 168
 partition function in statistical mechanics, 205
 perfect code, 189, 193, 195
 periodic correlation sequence, 147
 permutation groups, 237, 303, 315–17, 342, 352
 Peter–Weyl Theorem, 257
 Plancherel Theorem, 36, 40, 124, 168, 257
 Platonic solids, 238
 Poincaré distance, 304, 311, 395, 400
 Poincaré upper half plane (finite), 305, 400
 Poincaré upper half plane (real), 303, 394
 point-pair invariant, 311, 395, 400
 Poisson summation formula, 67, 69, 198–211
 Pólya–Vinogradov inequality, 142
 polygons, 121–5
 polynomial corresponding to a codeword, 190
 poset, 208–9
 positive definite spherical function, 349
 power function, 324, 331, 334, 395, 412
 power spectrum, 148
 pretrace formula, 391–2, 414–15
 prime ideal in ring of integers of a number field, 390
 prime implicant, 209–10
 prime number theorem, 24
 primitive element of a finite field, 63
 primitive hyperbolic element of Γ , 396, 404, 415
 primitive root, 20, 25–6
 principal series representation of $GL(2, \mathbb{F}_q)$, 366–9

- probability density, 98–103, 109–13
 probability distribution, 109
 projective plane, 191
 projective general linear group, $PGL(n, \mathbb{F}_q)$,
 306, 362
 projective special linear group, $PSL(n, \mathbb{F}_q)$,
 192, 241, 362–3
 pseudoprime, 19
 pseudorandom number, 98
 public-key cryptography, 28
- quadratic reciprocity law, 27, 128–50
 quadratic residue (square mod n), 129–50
 quadratic residue code, 191–2
 quaternion group, 265
 quotient, 5, 7, 12
- radar, 299–300
 Radon transform, 71–72
 Ramanujan graph, 55–8, 70, 86, 91, 285, 301,
 322, 357–8, 361, 418
 random number generator, 72, 97, 100–2,
 112–13, 286–8, 298–9
 random variable, 109
 random walk, 56, 97–109, 213–14, 286–8,
 298–9
 reductive group, 363
 Reed–Muller code, 175
 regular Markov chain, 109
 repetition code, 195
 representation, 2, 242
 Riemann hypothesis, 399
 Riemann hypothesis for Ihara zeta function,
 418
 Riemann hypothesis for zeta functions
 associated to curves, 325
 Riemann zeta function, 399
 right regular representation, 246
 ring, 5, 7
 rotation group, 304, 306, 395, 400
- Sato–Tate distribution, 87, 358
 scaling property of DFT, 45
 Schreier graph, 386
 Schrödinger representation, 299
 Schur decomposition, 53
 Schur orthogonality relations, 251
 Schur’s Lemma, 248
 Selberg trace formula, 67, 68, 120, 391–407,
 414–20
 Selberg zeta function, 398–9
 Selberg’s criterion, 307
 self-adjoint operator, 52
 self-dual group, 37, 167
 semicircle distribution, 87, 92, 358
- semidirect product, 180, 282
 shell in $\mathbb{Z}/n\mathbb{Z}$, 46, 178
 shift property of DFT, 45
 signal processing, 299–300
 simple group, 241, 363
 Smith normal form, 166
 solvable group, 281
 Soto–Andrade’s formula for spherical function
 on H_q , 355, 379
 spanning tree, 419
 special linear group, $SL(n, F)$, 241, 304,
 362–3, 394
 special orthogonal group, 304, 394
 spectra of graphs, 53–8, 71–81, 89–92, 104–7,
 177, 212–13, 313, 323, 338–9, 358–9
 spectral theorem, 52, 68, 409–10
 spectral theory, 52–54, 409–10
 spectroscopy, 54
 sphere packing condition, 194
 spherical function, 88–9, 180, 181, 341–61, 395,
 401, 411–13
 spherical transform, 348, 395, 402
 splitting field, 62
 statistical mechanics, 213–14
 subrepresentation, 243
 sum graph, 79
 support of a function, 224
 switching circuits, 207–11
 switching functions, 207–11
 symmetric group, S_n , 7, 180, 241–3, 255,
 264–6, 363
 symmetric power representation, 250
 symmetric set of generators, 46
 symmetric space, 85, 180, 302–3
 symmetric space (finite), 302–12
 symmetry group of a regular figure, 238,
 265–6, 363
- table of DFTs, 43
 tensor product of representations, 250
 tesseract, 176
 tetrahedron, 66
 theta function, 116
 three-term recurrence, 178, 183
 time-limiting operator, 228
 time series analysis, 155–60
 torus, 6, 15–16, 161–2, 364, 381–3
 torus in the sense of algebraic groups, 364,
 381–3
 trace, 65, 74, 89, 305, 365
 trace formula, 67, 68, 69, 200–202, 391–407,
 414–20
 translation operator, 45, 288
 translation property of DFT, 45, 69, 168
 tree, 408
 trivial character, 169
