	Preface to the English Edition	ix
	Introduction	xi
	1 Fourier series and integrals, filtering and sampling	1
1	Introduction	1
2	Fourier series	1
3	Fourier integrals	7
4	Filtering and sampling	9
5	“Wavelets” in the work of Lusin and Calderon	14
	2 Multiresolution approximations of $L^2(\mathbb{R}^n)$	18
1	Introduction	18
2	Multiresolution approximation: definition and examples	22
3	Riesz bases and orthonormal bases	25
4	Regularity of the function ϕ	29
5	Bernstein’s inequalities	30
6	A remarkable identity satisfied by the operator E_j	32
7	Effectiveness of a multiresolution approximation	41
8	The operators $D_j = E_{j+1} - E_j$, $j \in \mathbb{Z}$	45
9	Besov spaces	50
10	The operators E_j and pseudo-differential operators	54
11	Multiresolution approximations and finite elements	57
12	Example: the Littlewood-paley multiresolution approximation	60
13	Notes and comments	62

	3 Orthonormal wavelet bases	66
1	Introduction	66
2	The construction of wavelets in dimension 1	71
3	Construction of wavelets in dimension 2 by the tensor product method	81
4	The algorithm for constructing multi-dimensional wavelets	83
5	Computing two-dimensional wavelets	87
6	The general existence theorem for wavelet bases	93
7	Cancellation of wavelets	95
8	Wavelets with compact support	96
9	Wavelets with compact support in higher dimensions	107
10	Wavelets and spaces of functions and distributions	109
11	Wavelet series and Fourier series	112
12	Notes and comments	124
	4 Non-orthogonal wavelets	130
1	Introduction	130
2	Frames (or “skew structures”)	131
3	Ingrid Daubechies’ criterion	132
4	Riesz Bases and L^p convergence	133
	5 Wavelets, the Hardy space H^1 and its dual BMO	138
1	Introduction	138
2	Equivalent definitions of the space $H^1(\mathbb{R}^n)$	141
3	Atomic decomposition at the coefficient level	144
4	Back to earth	148
5	Atoms and molecules	150
6	The space BMO of John and Nirenberg	151
7	Maurey’s theorem	156
8	Notes and complementary remarks	157
	6 Wavelets and spaces of functions and distributions	163
1	Introduction	163
2	Criteria for belonging to $L^p(\mathbb{R}^n)$ and to $L^{p,s}(\mathbb{R}^n)$	164
3	Hardy spaces $H^p(\mathbb{R}^n)$ with $0 < p \leq 1$	176
4	Hölder spaces	178
5	The Beurling algebra	186
6	The hump algebra	189
7	The space generated by special atoms	192
8	The Bloch space $B_\infty^{0,\infty}$	197
9	Characterization of continuous linear operators $T : B_1^{0,1} \rightarrow B_1^{0,1}$	198
10	Wavelets and Besov spaces	199

Contents

vii

11	Holomorphic wavelets and Bochkariiev's theorem	202
12	Conclusion	207
	Bibliography	208
	New references on wavelets and their applications	220
	Index	221
