
Contents

	Preface	<i>page vii</i>
1	Modelling a viscous fluid	1
1.1	Modelling aspects	1
	1.1.1 Shear forces	3
	1.1.2 Normal forces	3
1.2	Stress	4
1.3	The Navier-Stokes equations	9
	1.3.1 Conservation of mass	10
	1.3.2 Conservation of momentum	10
	1.3.3 Conservation of energy	11
1.4	Vorticity	13
1.5	Nondimensionalisation	14
	Exercises	16
2	Boundary layers	22
2.1	Asymptotic methods for boundary layers	22
	2.1.1 An ordinary differential equation	22
2.2	The boundary layer on a flat plate	28
	2.2.1 The solution of Prandtl's boundary layer equations for flow past a flat plate	31
	2.2.2 Remarks on Blasius' equation	32
	2.2.3 Boundary layer equations in a nonuniform external flow	32
	2.2.4 Limitations of Prandtl's equation	33
	2.2.5 Predictions of Prandtl's theory	37
	2.2.6 The theory of flight	38

vi	<i>Contents</i>	
2.3	Further applications of Prandtl's equations	40
2.3.1	Thin wakes	40
2.3.2	Jets	41
2.3.3	More general boundary layers	43
	Exercises	44
3	Slow viscous flow	50
3.1	Flow at low Reynolds number	50
3.2	A simple model equation	51
3.3	Slow flow past a sphere	52
3.4	Slow flow past a circular cylinder	55
3.5	Slow flow with free boundaries	57
	Exercises	60
4	Thin films	64
4.1	Lubrication theory for slider bearings	64
4.2	Squeeze films	70
4.3	Thin films with free surfaces	71
4.3.1	Zero surface tension	71
4.3.2	Flows driven by surface tension	73
4.4	Hele-Shaw flow	73
	Exercises	77
5	Spatial and temporal complexity	83
5.1	Flow in a porous medium	83
5.2	Unsteady flows	87
5.3	Stability theory	90
5.4	Turbulence	92
5.5	Conclusions	94
	Exercises	96
	<i>Appendix A</i> A brief introduction to asymptotics	101
	<i>Appendix B</i> Uses of group theory	105
B.1	Ordinary differential equations	105
B.2	Partial differential equations	107
	References	109
	Index	111
