|--|----------------|
| <i>Foreword</i>  | <i>page xi</i> |
| <b>1 Overview</b>  | 1              |
| 1.1 The Scope of Cosmochemistry  | 1              |
| 1.2 Cosmochemistry and the Four Physical Sciences                              | 2              |
| 1.3 A Standard Abundance Distribution  | 3              |
| 1.4 The Chemical History of Planetary Material                                 | 6              |
| 1.5 Abundances Beyond the Solar System   | 7              |
| 1.6 Two Approaches to Cosmochemistry   | 8              |
| <b>2 Minerals: An Introduction to the Nomenclature and Chemistry</b>           | 9              |
| 2.1 Introduction   | 9              |
| 2.2 Mineralogy   | 11             |
| 2.3 Some Useful Concepts from Crystallography                                  | 12             |
| 2.4 A Simplified Mineral Classification  | 14             |
| 2.5 The Common Minerals of Cosmochemistry                                      | 16             |
| 2.5.1 Oxides   | 18             |
| 2.5.2 The Olivines   | 19             |
| 2.5.3 The Pyroxenes  | 19             |
| 2.5.4 The Feldspars  | 21             |
| 2.6 Mineralogy as a Clue to History: The Bowen Reaction Series;<br>Paragenesis | 22             |
| 2.7 Problems   | 26             |
| <b>3 A Brief Introduction to Petrology</b>                                     | 27             |
| 3.1 Preliminary Remarks  | 27             |
| 3.2 The Classification of Igneous Rocks  | 28             |
| 3.3 Some Terminology Related to the Texture of Rocks                           | 30             |
| 3.4 Basalts, Gabbros, and Anorthosites   | 31             |
| 3.5 Phase Diagrams   | 31             |
| 3.6 Formation of the Lunar Highlands: A Petrological Exercise                  | 35             |
| 3.7 Problems   | 38             |
| <b>4 A Résumé of Thermodynamics and Statistical Mechanics</b>                  | 39             |
| 4.1 Introductory Remarks   | 39             |
| 4.2 Systems, States, and Variables   | 39             |
| 4.3 Additional State Functions and the Laws of Thermodynamics                  | 41             |
| 4.4 How to Tell the Direction of a Chemical Reaction                           | 44             |

viii *Contents*

|          |  |     |
|----------|--|-----|
| 4.5      | Calculation of $\Delta G$ ; Standard States                                      | 46  |
| 4.6      | Free Energy Changes At Arbitrary Pressures                                       | 48  |
| 4.7      | Heat Capacities  | 52  |
| 4.8      | Chemical Equilibrium   | 52  |
| 4.9      | Statistical Mechanics: Distributions   | 54  |
| 4.10     | Boltzmann's postulate: the Connection Between $W$ and the Entropy $S$            | 57  |
| 4.11     | The Particle in a Box: Quantum Cells for Free Particles                          | 59  |
| 4.12     | Chemical Equilibrium and Statistical Mechanics                                   | 61  |
| 4.13     | Problems   | 62  |
| <b>5</b> | <b>Condensation Sequences and the Geochemical Classification of the Elements</b> | 64  |
| 5.1      | The Concept of Geochemical Classification  | 64  |
| 5.2      | The Siderophile–Lithophile Distinction   | 68  |
| 5.3      | The Problem with the Chalcophiles  | 71  |
| 5.4      | Molecular Equilibria in the Gas Phase  | 71  |
| 5.5      | The Condensation of Solids   | 76  |
| 5.6      | The Geochemical Classes of Volatile and Refractory                               | 80  |
| 5.7      | The Geochemistry of Trace Elements: Ionic Substitution                           | 82  |
| 5.8      | Problems   | 88  |
| <b>6</b> | <b>The Theory of the Bulk Composition of the Planets</b>                         | 89  |
| 6.1      | Geophysical Constraints  | 89  |
| 6.2      | Earth Models   | 91  |
| 6.3      | The Moon and Terrestrial Planets   | 94  |
| 6.4      | The Jovian Planets   | 96  |
| 6.5      | A Zero-Order Model for the Solar Nebula  | 97  |
| 6.6      | Equilibrium and Disequilibrium Condensation                                      | 99  |
| 6.7      | The Condensation Sequences of Lewis and Coworkers                                | 101 |
| 6.8      | Difficulties with the Condensation Sequences                                     | 104 |
| 6.9      | Problems   | 108 |
| <b>7</b> | <b>Meteorites and the Standard Abundance Distribution (SAD)</b>                  | 109 |
| 7.1      | An Overview  | 109 |
| 7.2      | Meteorite Ages   | 112 |
| 7.3      | Meteorites and the SAD   | 116 |
| 7.4      | The SAD and Nuclear Processes: Overview  | 119 |
| 7.5      | Problems   | 123 |
| <b>8</b> | <b>An Introduction to Isotope Geology with an Emphasis on Meteorites</b>         | 125 |
| 8.1      | Introduction   | 125 |
| 8.2      | Rubidium–Strontium Dating; Sample and Model Ages                                 | 125 |
| 8.3      | Evolution of the Initial Ratio: $(^{87}\text{Sr}/^{86}\text{Sr})_0$              | 128 |
| 8.4      | Further Remarks on Radioactive Dating  | 130 |
| 8.5      | Stable Isotope Geology   | 131 |
| 8.6      | Oxygen Anomalies and the Refractory Inclusions of Meteorites                     | 135 |
| 8.7      | Isotopic Anomalies in the Noble Gases  | 136 |
| 8.8      | Aluminum-26 in the Early Solar System  | 144 |
| 8.9      | The Nature of the Allende Inclusions   | 147 |
| 8.10     | Problems   | 148 |

| <i>Contents</i>   | ix  |
|---|-----|
| <b>9 Some Concepts from Nuclear Physics</b>                                     | 150 |
| 9.1 Introductory Remarks  | 150 |
| 9.2 The Semi-empirical Mass Formula   | 150 |
| 9.3 The One-Particle or Shell Model of the Nucleus                              | 157 |
| 9.4 The Classical Forms of Radioactivity, and Fission                           | 165 |
| 9.5 Nuclear Reactions and Their Rates   | 171 |
| 9.6 Problems  | 184 |
| <b>10 Energy Generation in Stars and Nucleosynthesis</b>                        | 186 |
| 10.1 Introduction   | 186 |
| 10.2 The Burning of Hydrogen and Helium   | 187 |
| 10.3 Carbon, Oxygen, and Neon Burning   | 190 |
| 10.4 Silicon Burning, Equilibrium, and Quasi-Equilibrium Processes              | 191 |
| 10.5 The Problem of the Light Nuclei: Li, Be, and B                             | 199 |
| 10.6 Cosmic Rays and Abundances of LiBeB  | 203 |
| 10.7 Cosmological Production of the Light Elements                              | 206 |
| 10.8 Synthesis of Nuclides Beyond the Iron Peak: the <i>s</i> -Process          | 214 |
| 10.9 The Classical <i>r</i> -Process  | 220 |
| 10.10 Additional Mechanisms for the Production of Elements Beyond the Iron Peak | 224 |
| 10.11 Supernovae and Supernova 1987A  | 226 |
| 10.12 Problems  | 228 |
| <b>11 Atomic and Molecular Spectra</b>  | 230 |
| 11.1 Introductory Remarks   | 230 |
| 11.2 Atomic Spectra: The Nomenclature of <i>LS</i> Coupling                     | 230 |
| 11.3 A Brief Description of the Data Tables                                     | 234 |
| 11.4 Diatomic Molecules: Rotation and Vibration                                 | 237 |
| 11.5 Diatomic Molecules: Electronic Structure and Wavelengths                   | 243 |
| 11.6 Rotational Structure of Symmetrical Top Molecules                          | 249 |
| 11.7 Rotational Structure of Asymmetrical Top Molecules                         | 251 |
| 11.8 Nuclear Effects in Atomic and Molecular Spectra: Hyperfine Structure       | 253 |
| 11.9 Problems   | 258 |
| <b>12 The Analysis of Stellar Spectra</b>                                       | 260 |
| 12.1 The Identification of Lines in Stellar Spectra                             | 260 |
| 12.2 Details of Identification Work   | 263 |
| 12.3 The Analysis of Stellar Spectra: Overview                                  | 265 |
| 12.4 The Slab Model   | 270 |
| 12.5 Details of the Line Absorption Coefficient                                 | 275 |
| 12.6 Doppler Broadening of Spectral Lines                                       | 276 |
| 12.7 The Curve of Growth for Equivalent Widths                                  | 278 |
| 12.8 Details of the Curve of Growth   | 281 |
| 12.9 The Method of Spectral Synthesis   | 284 |
| 12.10 Problems  | 287 |

|  |     |
|--|-----|
| <b>13 The Chemistry of Stars and Stellar Systems</b>                     | 289 |
| 13.1 The General Framework   | 289 |
| 13.2 Spectral Classification   | 290 |
| 13.3 The Hertzsprung–Russell (H–R) Diagram                               | 292 |
| 13.4 Stellar Abundances  | 297 |
| 13.4.1 Population-Related Abundance Patterns                             | 297 |
| 13.4.2 Abundance Variations Attributed to <i>In Situ</i> Nucleosynthesis | 305 |
| 13.4.3 Abundance Variations Attributed to Chemical Fractionations        | 308 |
| 13.5 Problems  | 314 |
| <b>14 Cold, Non-stellar Material in Galaxies</b>                         | 315 |
| 14.1 Introduction  | 315 |
| 14.2 Molecular Clouds  | 322 |
| 14.3 The Theory of Interstellar Chemistry                                | 329 |
| 14.4 Interstellar Grains: Optical Properties                             | 337 |
| 14.5 Interstellar and Circumstellar Features                             | 344 |
| 14.6 The Formation of Dust   | 352 |
| 14.7 Problems  | 357 |
| <b>15 Emission-Line Regions and their Chemical Abundances</b>            | 359 |
| 15.1 Emission Regions  | 359 |
| 15.2 Planetary and Diffuse Nebulae: The Hydrogen Lines                   | 360 |
| 15.3 Electron Temperatures and Densities in Emission Regions             | 366 |
| 15.4 Determination of Abundances   | 371 |
| 15.5 Abundances in Emission Regions                                      | 374 |
| 15.6 Atlas of Simulated Emission Spectra                                 | 384 |
| 15.7 Problems  | 385 |
| <b>16 Abundances of the Elements in Galaxies</b>                         | 387 |
| 16.1 An Introduction to Galactic and Extragalactic Research              | 387 |
| 16.2 Basic Data for the Chemical Evolution of the Solar Neighborhood     | 393 |
| 16.3 Analytical Models of Chemical Evolution: Basic Relations            | 395 |
| 16.4 Stars and the Total Mass  | 398 |
| 16.5 The Distribution of Stellar Abundances: Infall                      | 400 |
| 16.6 Fixing the Model Parameters from Observations                       | 403 |
| 16.7 The Distribution of Stellar Abundances: Gas Loss                    | 407 |
| 16.8 Recent Developments in Galactic Chemical Evolution                  | 408 |
| 16.9 Abundances in Distant Objects                                       | 412 |
| 16.10 Dark Matter in the Universe  | 414 |
| 16.11 Problems   | 416 |
