

Contents

<i>Preface</i>	<i>page</i>	vii
1 Representations		1
1.1 Basic definitions		1
1.2 Complex representations		5
1.3 Exercises		21
2 Induction theorems		23
2.1 Induction theorems of Artin and Brauer		25
2.2 Brauer induction in canonical rational form		32
2.3 Brauer induction in canonical integral form		45
2.4 Inductive explicit Brauer induction		54
2.5 Exercises		67
3 GL_2F_q		72
3.1 Weil representations		73
3.2 Explicit Brauer induction and Shintani descent		89
3.3 Exercises		104
4 The class-group of a group-ring		106
4.1 Adams operations and rationality		107
4.2 Describing the class-group by representations		110
4.3 Determinantal congruences		120
4.4 Detecting elements in the class-group		131
4.5 Galois properties of local determinants		138
4.6 Adams operations and determinants		153
4.7 Exercises		166
5 A class-group miscellany		170
5.1 Restricted determinants		172
5.2 The class-group of $\mathbf{Z}[Q_8]$		176
5.3 Relations between Swan modules		189
5.4 The class-group of a maximal order		205

Cambridge University Press

978-0-521-46015-6 - Explicit Brauer Induction: With Applications to Algebra and Number Theory

Victor P. Snaith

Table of Contents

[More information](#)

vi	<i>Contents</i>	
	5.5 Swan subgroups for nilpotent groups	219
	5.6 Cyclic groups	230
	5.7 Exercises	241
6	Complete discrete valuation fields	245
	6.1 Ramification groups and functions	246
	6.2 Kato's abelian conductor	258
	6.3 The non-abelian Swan conductor	282
	6.4 Exercises	297
7	Galois module structure	299
	7.1 Local Chinburg invariants	300
	7.2 The global Chinburg invariant	331
	7.3 The Chinburg invariant modulo $D(\mathbf{Z}[G])$	337
	7.4 Real cyclotomic Galois module structure	365
	7.5 Exercises	396
	<i>Bibliography</i>	403
	<i>Index</i>	407
