Contents

	<i>List of illustrations</i>	<i>vi</i>
	<i>List of tables</i>	<i>x</i>
	<i>Acknowledgements</i>	<i>xi</i>
1	Introduction	1
2	Australian palaeopathology, survey methods, samples and ethnohistoric sources	5
3	Upper Pleistocene pathology of Sunda and Sahul: some possibilities	21
4	Pathology in late Pleistocene and early Holocene Australian hominids	41
5	Stress	89
6	Infectious disease	125
7	Osteoarthritis	161
8	Trauma	188
9	Neoplastic disease	217
10	Congenital malformations	235
11	Motupore: the palaeopathology of a prehistoric New Guinea island community	256
12	The old and the new: Australia's changing patterns of health	272
	<i>References</i>	<i>295</i>
	<i>Index</i>	<i>321</i>

List of illustrations

Plates

4-1a, b	Surface and lateral view, pitting and osteophytes on the right ulna of WLH3	43
4-2	Eroded head of the radius, with osteophytes	44
4-3a, b	Lateral and surface view, head of the radius	45
4-4a, b	Distal end and anterior surface, right humerus	46
4-5	Hole in a humerus, indicative of infection	48
4-6	Bowing in a humerus	50
4-7	Arthritic degeneration in the glenoid fossa	52
4-8	Depressed fractures in the cranial vault	55
4-9	Radiograph of healed parrying fracture (ulna)	56
4-10	Callus formation from the parrying fracture	56
4-11	Lower jaw with both canines missing	59
4-12a, b	Magnification of scratches across molar enamel	61
4-13	Robust calvarium, WLH50	63
4-14	Radiograph of cancellous formation	63
4-15	Cross-section of a left parietal, showing cancellous tissue	65
4-16	Structures of the diploeic bone, WLH50 vault	65
4-17	Healed fracture and pseudoarthrosis of the radius, Murrabit	71
4-18a, b	Pseudoarthrosis of the ulna, Kow Swamp 1	71
4-19	Fractured ulna and radius, Murrabit	72
4-20	Ankylosed tibia and fibula	73
4-21	Supernumerary tooth, Keilor cranium	74
4-22	Fracture of left parietal bone	75
4-23, 24, 25	Various views of 31837 cranium	76-7
4-26	Flattened glenoid fossae	78
4-27	Bony development of 38586 cranium	79
4-28	Small face of 38586	80
4-29, 30	Two views of 38587 cranium	82-3
4-31	Bony proliferation around maxilla	83
4-32	Vault of 38587	84
4-33	Radiograph of vault structures in 38587	85
5-1a, b, c	Three categories of cribra orbitalia	91
5-2	Healed scar from a cribra orbitalia lesion	92
5-3	Osteoporosis, child's cranium	101
5-4	Osteoporosis, child's cranium	101
5-5a, b, c	Three forms of dental enamel hypoplasia	107
5-6	Harris lines in 'step ladder' pattern	120
6-1	Osteomyelitis in a femur	131
6-2	Osteomyelitis in a tibia	132
6-3	Diaphysis of the tibia	132
6-4	Lesion caused by chronic infection	133

[More information](#)LIST OF ILLUSTRATIONS *vii*

6-5	Osteomyelitic tibiae	133
6-6a, b	Wider view of two tibiae showing lesions	134
6-7	Nodular cavitation typical of treponemal infection	138
6-8	Serpiginous cavitation across a frontal bone	139
6-9	<i>Caries sicca</i> and healed scars on a left parietal	139
6-10	Circumvallate cavitation on a central Murray cranium	140
6-11	Scars and cracking from a treponemal lesion	140
6-12	Facial destruction in an individual from the Northern Territory	141
6-13	Facial damage from treponemal infection	141
6-14a, b	Bony destruction and healed lesions from chronic infection	142
6-15	Bilateral lesions on scapulae	145
6-16	Facial destruction in a woman from the Western Desert N.T.	148
6-17	Facial destruction in an old woman from Cooper Creek S.A.	150
6-18	Facial destruction, the active disease	151
6-19a, b	Tibiae showing bowing and infection	158-9
7-1	Eroded medial femoral condyle	163
7-2	Osteophytic lipping	164
7-3	Ankylosis of a knee joint	167
7-4	Ankylosis as a result of infection	168
7-5	Multiple ankylosing of foot and ankle bones	168
7-6	Ankylosis of a left foot	168
7-7	Vertebral osteophytosis	169
7-8	Ankylosing spondylitis in two lumbar vertebrae	170
7-9	Ankylosing spondylitis, fused section of vertebrae	171
7-10	Ankylosing spondylitis of sterno-costal and sternoclavicular joints	172
7-11	Thoracic ankylosis	172
7-12a, b	Temporomandibular arthritis	178
8-1	Parrying fractures	190
8-2a, b	Triple comminuted fracture of the femur	193
8-3	Femoral neck fracture	195
8-4	Femoral shaft fracture	196
8-5	Fractures of a humerus and tibiae	197
8-6	Radiograph of a fractured tibia and fibula	198
8-7	Aranda man with a fractured leg, circa 1920	198
8-8	Pseudoarthrosis in the lower arm	199
8-9	Pseudoarthrosis	199
8-10a, b	Depressed fracture of the cranial vault	201
8-11	Split cranial fracture	202
8-12	Dented zygomatic arch	203
8-13	Trephination	209
8-14	Trephination	210

viii LIST OF ILLUSTRATIONS

8-15a, b	Surgical interventions on a cranium and close-up of the opening	211
8-16a, b	Amputated femora	213
8-17	Man with an amputated leg, central Australia	215
9-1	Lesions from multiple myeloma	220
9-2	Scattered perforations of multiple myeloma	220
9-3	Scattered perforations of multiple myeloma	221
9-4	Lesion in a mandible	221
9-5	Metastatic carcinoma lesion	224
9-6	Close-up of the lesion	224
9-7	Nasopharyngeal carcinoma	227
9-8	Destruction of the palate by carcinoma	228
9-9, 10	Two views of oro-facial destruction	229
9-11	Destruction of the maxilla by carcinoma	231
9-12	Button osteoma	233
9-13	Close-up of the osteoma	234
10-1a	Sacrum with partial bridging	237
10-1b	Sacrum with neural tube variant	238
10-2	Six sacra with neural tube defect	238
10-3	Bregmatic meningocele	242
10-4	Bony rim of the meningocele	243
10-5	Cleft palate	245
10-6	Circular markings on frontal bone	246
10-7	Cleft palate	248
10-8	Cleft lip (partial)	248
10-9	Cleft palate	249
10-10, 11, 12	Scaphocephalic cranium of a child	251-2
10-13	Radiograph of the cranium	253
10-14	Scaphocephalic calvarium of an adult	253
10-15	Cranium with premature suture fusion	254
11-1a, b	Non-specific infection in a humerus	260
11-2	Radiograph of the humerus	260
11-3	Osteomyelitic infection of a femur	261
11-4a, b, c, d	Bowed tibiae	261-2
11-5	Cavitation with radial scars on a cranium	262
11-6	Cribr orbitalia indicative of anaemia	263
11-7	Large frontal lesion typical of symmetrical osteoporosis	264
11-8	Symmetrical osteoporosis	264
11-9	Radiograph of the frontal lesion	265
 <i>Maps</i>		
2-1	Site and sample locations	14
2-2	The central Murray region	15
2-3	Four of the five main areas in the survey	17

Figures

5-1	Age distribution of DEH, various populations	111
5-2	Proportions of young adults in each area	120
7-1	Adults with missing teeth and TMJ arthritis	182
7-2	Proportion of missing teeth in all crania	182
7-3	Young adults with missing teeth	183
7-4	Old adults with missing teeth	183
7-5	A comparison of tooth loss in young and old adults	184

List of tables

2-1	Post-cranial samples	11
2-2	Cranial samples	12
5-1	Frequencies of cribra orbitalia for adults	94
5-2	Frequencies of cribra orbitalia for five age groups	95
5-3	Frequencies of cribra orbitalia, various populations	97
5-4a	DEH frequencies, combined areas	108
5-4b	DEH frequencies, various areas	108
5-5	Frequency of Harris lines	117
5-6	Harris lines and morbidity indices	118
6-1	Non-specific infection for post-cranial skeleton	128
6-2	Treponemal infection on crania	143
6-3	Non-specific and treponemal disease frequencies	143
6-4	Tibial bowing	158
7-1	Frequencies of arthritis	165
7-2	Post-cranial osteophytosis	166
7-3	TMJ arthritis in young and old adults	179
7-4	Adults with missing teeth and TMJ arthritis	181
7-5	Adults with missing teeth without TMJ arthritis	183
8-1	Distribution of fractures	189
8-2	Multiple cranial trauma	203
8-3	Distribution of cranial trauma	204
9-1	Cancerous lesions of soft tissue	226
10-1	Aboriginal sacra with NTDs	237
11-1	Pathological individuals from a cemetery, on Motupore Island, Papua, New Guinea	259

Acknowledgements

There are a number of people and organisations which helped me prepare and write this book. The South Australian Museum, Queensland Museum, Western Australian Museum and the Prehistory Department of the Research School of Pacific Studies, Australian National University, provided the photographs. In particular, I want to thank Dragi Markovic whose extraordinary photographic skills produced many of the photographs. The recent reburial of some items required reproduction of certain plates from colour slides taken by me, often cursorily and in poor lighting many years ago, when I could never have realised that they would one day be the only photographic record. I am indebted to Dragi for his attempts to enhance these photographs, as well as for other work he has done for me over the years. I wish to thank the Prehistory Department of the Research School of Pacific Studies, Australian National University, for the financial support for the photographic work and the Australian Academy of Humanities.

Without the co-operation of museums and their staff throughout Australia the gathering of data and the re-examination of many pathological examples would not have been possible. These include the Queensland Museum, the Australian Museum, the National Museum of Australia, the Victorian Museum, the South Australian Museum, the Western Australian Museum and the Tasmanian Museum and Art Gallery. Professor Jim Allen carried out the excavations at Motupore Island and I am grateful to him for access to the skeletal remains described in Chapter 11 as well as for his editorial comments. Many physicians and specialists have allowed me to pick their brains, albeit that one or two pathological examples have foxed them, and I thank them for their time.

Much has been said with regard to the reburial issue that has arisen in Australia as well as in North America. I can only say that I have spoken with Aboriginal people from many parts of the continent and while they have expressed general reservations concerning palaeobiological research on the remains of their ancestors, I have received understanding from them for what I was trying to do. I hope, therefore, that in some small way that community will find this book useful for the information it contains and that they may appreciate the testament of unwritten knowledge that their ancestors left for us all to 'read'. An elder of the Mutti Mutti people of New South Wales once told me that she believed research was important because the fossil humans that emerged from the sand dunes in her country were coming back to tell us something. They tell us who they were, where and how they lived and provide proof to both Aboriginal and non-Aboriginal people of how long the first Australians have been living here. I have to say that without the co-operation, friendship and understanding that I have received from many Aboriginal people this book may not have been possible.

xii ACKNOWLEDGEMENTS

Lastly, but most sincerely, I want to thank Beata Malczewska whose tireless strength, unfailing support and sincere interest largely kept me writing. This is for her and she has earned every comma.
