Preface \hspace{1cm} \hspace{1cm} page xi

A summary of the book in a nutshell \hspace{1cm} 1

PART A \hspace{1cm} WEAK WIN AND STRONG DRAW \hspace{1cm} 15

Chapter I \hspace{1cm} Win vs. Weak Win \hspace{1cm} 17

1 Illustration: every finite point set in the plane is a Weak Winner \hspace{1cm} 19
2 Analyzing the proof of Theorem 1.1 \hspace{1cm} 32
3 Examples: Tic-Tac-Toe games \hspace{1cm} 42
4 More examples: Tic-Tac-Toe like games \hspace{1cm} 59
5 Games on hypergraphs, and the combinatorial chaos \hspace{1cm} 72

Chapter II \hspace{1cm} The main result: exact solutions for infinite classes of games \hspace{1cm} 91

6 Ramsey Theory and Clique Games \hspace{1cm} 92
7 Arithmetic progressions \hspace{1cm} 106
8 Two-dimensional arithmetic progressions \hspace{1cm} 118
9 Explaining the exact solutions: a Meta-Conjecture \hspace{1cm} 131
10 Potentials and the Erdős–Selfridge Theorem \hspace{1cm} 146
11 Local vs. Global \hspace{1cm} 163
12 Ramsey Theory and Hypercube Tic-Tac-Toe \hspace{1cm} 172

PART B \hspace{1cm} BASIC POTENTIAL TECHNIQUE – GAME-THEORETIC FIRST AND SECOND MOMENTS \hspace{1cm} 193

Chapter III \hspace{1cm} Simple applications \hspace{1cm} 195

13 Easy building via Theorem 1.2 \hspace{1cm} 196
14 Games beyond Ramsey Theory \hspace{1cm} 204
15 A generalization of Kaplansky’s game \hspace{1cm} 216
## Contents

### Chapter IV Games and randomness

16 Discrepancy Games and the variance

17 Biased Discrepancy Games: when the extension from fair to biased works!

18 A simple illustration of “randomness” (I)

19 A simple illustration of “randomness” (II)

20 Another illustration of “randomness” in games

### PART C ADVANCED WEAK WIN – GAME-THEORETIC HIGHER MOMENT

#### Chapter V Self-improving potentials

21 Motivating the probabilistic approach

22 Game-theoretic second moment: application to the Picker–Chooser game

23 Weak Win in the Lattice Games

24 Game-theoretic higher moments

25 Exact solution of the Clique Game (I)

26 More applications

27 Who-scores-more games

### Chapter VI What is the Biased Meta-Conjecture, and why is it so difficult?

28 Discrepancy games (I)

29 Discrepancy games (II)

30 Biased Games (I): Biased Meta-Conjecture

31 Biased games (II): Sacrificing the probabilistic intuition to force negativity

32 Biased games (III): Sporadic results

33 Biased games (IV): More sporadic results

### PART D ADVANCED STRONG DRAW – GAME-THEORETIC INDEPENDENCE

#### Chapter VII BigGame–SmallGame Decomposition

34 The Hales–Jewett Conjecture

35 Reinforcing the Erdős–Selfridge technique (I)

36 Reinforcing the Erdős–Selfridge technique (II)

37 Almost Disjoint hypergraphs

38 Exact solution of the Clique Game (II)
