

## Subject index

- acetamidomalonate synthesis 123–4  
 S-adenosyl-L-methionine 11, 12, 174, 181  
 alanine, *N*-acetyl 9  
   structure 4  
 alkaloids, biosynthesis from amino acids 16–17  
 alloseleucine 6  
 allosteric change 178  
 allothreonine 6  
 Alzheimer's disease 14  
 amidation at peptide *C*-terminus 57, 94, 181  
 amides, *cis*–*trans* isomerism 20  
   *N*-acylation 72  
   *N*-alkylation 72  
   hydrolysis 57  
   *O*-trimethylsilylation 72  
   reduction to  $\beta$ -aminoalkanoles 72  
 amidocarbonylation in amino acid synthesis 125  
 amino acids, abbreviated names 7  
   acid–base properties 32  
   antimetabolites 200  
   as food additives 14  
   as neurotransmitters 17  
   asymmetric synthesis 127  
    $\beta$ - 17–18  
   biosynthesis 121  
   biosynthesis from, of creatinine 183  
     of nitric oxide 186  
     of porphyrins 185  
     of ribonucleotides 183  
     of urea 185  
   biotechnological synthesis 121  
   circular dichroism 40  
   conjugation with other compounds 182  
   D- 13–14  
   definitions 1  
   derivatisation 58  
   extra-terrestrial distribution 15  
    $\gamma$ - 17  
   Gabriel synthesis 125  
   GLC 85  
   in fossil dating 15  
   in geological samples 15  
   in Nature 1  
   IR spectrometry 36  
   isolation from proteins 121  
   mass spectra 61  
   metabolism, products of 187  
   metal-binding properties 34  
   NMR 41  
   physicochemical properties 32  
   protein 3  
   PTC derivatives 87  
   quaternary ammonium salts 50  
   reactions of amino group 49, 51  
   reactions of carboxy group 49, 53  
   racemisation 56  
   routine spectrometry 35  
   Schöllkopf synthesis 127–8  
   Schiff base formation 49  
   sequence determination 97 *et seq.*  
     following selective chemical degradation 107  
     following selective enzymic degradation 109  
     general strategy for 92  
     identification of *C*-terminus 106–7  
     identification of *N*-terminus 94, 97  
       by solid-phase methodology 100  
       by stepwise chemical degradation 97  
       by use of dipeptidyl aminopeptidase 105  
       by stepwise enzymic degradation 105  
       racemisation during 103  
     of genetically abnormal proteins 112  
   sources and roles 1  
   sources of information xiv–xv, 19  
   stereoselective synthesis 127  
   synthesis 120  
     Bucherer–Bergs 123–4  
     by carbonylation of alkylamides 123  
     from coded amino acids 122  
     from diethyl acetamidomalonate 124  
     from glycine derivatives 123

## Subject index

- Strecker 123–4  
 thin-layer chromatography 59  
 trivial names 4–6  
 unusual 11  
 UV spectrometry 37  
 UV fluorescence spectrometry 37  
 $\alpha$ -amino group protection 134  
 aminoisobutyric acid 120  
 aminoacylRNAs 3  
 aminoadipic acid 18  
 aminolaevulinic acid 18  
 aminophosphonic acids 2  
 aminosulphonic acids 2  
 amphiphilic oligopeptides 28  
 angiotensin II, mechanism of generation 203  
 angiotensin-converting enzyme (ACE) 203  
 antibodies, epitopes of 213  
   production of 213  
 anthrax spore, poly(D-glutamic acid) content 3  
 arginine, structure 4  
 asparagine, structure 4  
 aspartic acid, *N*-methyl-D- 14  
   side-chain reactions 122–3  
   structure 4  
 azapeptides 211  
 azetidine-2-carboxylic acid 13  
 azlactones (*see also* oxazolones) 53, 124  
   asymmetric hydrogenation 128  
  
 Barrett representation, L-amino acid 4  
 $\beta$ -bends and  $\beta$ -turns 24  
 bestatin 18  
 bradykinin 213  
   mass spectrum 73  
 bradykinin analogue, conformation 26  
 Bucher–Bergs synthesis of amino acids 123–4  
  
 $\gamma$ -carboxyglutamic acid 12, 124  
 $\alpha$ -carboxy-group protection 135  
 carboxylation of amino acid side-chain 8  
 carnitine 18  
 cell adhesion peptide 24, 27  
 chemical ionisation MS 75  
 Chou–Fasman rules for CD 41  
*cis*-peptide bonds 21  
 citrulline 8  
 coded amino acids 3  
 combinatorial synthesis of peptides 215  
 conformations of peptides 20  
   transitions between 29  
   *N*-methyl peptides 25  
 crosslinks in peptides and proteins (*see also*  
   disulphide bonds) 92  
 crosslinking amino acids 8, 92  
 Curtius rearrangement, in amino acid synthesis  
   123, 125  
 cyclic peptides  
   homodetic 10, 26, 168  
   heterodetic 170  
 cyclosporin A 92  
  
   structure 10  
 cysteine, structure 5  
  
 dansylamino acids 58–9  
 dehydroalanine 8  
 denaturing of peptides 29–30  
 deoxyribonucleic acid, sequence determination of  
   116  
 depsiptides, definition 3  
 derivatisation of amino acids for analysis 58  
 diethoxypiperazines 128  
 dimethylvaline in dolastatin 15, 67  
 dipeptides, conformations 21, 26  
 disulphide bonds  
   determination of position of 112  
   exchange reactions of 112  
   formation from cysteine 8  
   methods of cleaving 96  
   methods for forming 170  
   types in peptides and proteins 91  
 dityrosine 8  
 DNA sequence determination 116  
 dolastatin 15, structure determination 67  
 domain 27  
 L-Dopa 12  
 dopamine 12  
  
 Edman sequencing 57, 70, 77, 97  
 enantiomeric analysis of amino acids 59  
 enkephalins 2, 212  
 enniatins 3  
 enzymes, quaternary structure 28  
 epidermal growth factor (EGF) 202  
 essential amino acids 13  
 extended conformation of peptide 21  
  
 fast atom bombardment MS 75  
 Fischer projection, L-amino acid 4, 9  
 fluoresceamine derivatives of amino acids 58–9  
 Fmoc amino acids  
   in analysis 58–9  
   in peptide synthesis 135  
 folic acid 200  
  
 GABA 17  
 Gabriel synthesis of amino acids 125  
 genetic code 175  
 globular proteins 28  
 glutamic acid  
   side-chain reactions 122–3  
   structure 4  
 glutamine  
   side-chain methylation 8  
   structure 4  
 glutathione 2  
   biosynthesis of 190  
   in biosynthesis of leukotriene derivatives 192  
 glycine  
   in interstellar dust clouds 15  
   structure 4

## Subject index

- glycosylated amino acids 8  
 glycyglycine, formation 7  
 gramicidin S analogues, conformation 25  
 gramicidins, MS 75
- helicogenic amino acids 22–3  
 $\alpha$ -helix 24  
 CD 36, 39  
 $\alpha$ -helix-promoting amino acids, *see* helicogenic amino acids  
 histidine, structure 5  
 hydantoin synthesis 123–4  
 hydantoinase in asymmetric synthesis, amino acids 127  
 hydrophilicity 4  
 hydrophobicity 4  
 hydroxy acids 3  
 hydroxyproline structure 8  
 hydroxyvaline in dolastatin 15, 67
- imino acids 3–4  
 instrumentation for MS 75  
 insulin 2, 10, 25, 178, 203  
 formation from proinsulin 11  
 structure 10  
 iodo-L-alanine 122  
 IR spectrometry 36  
 isoleucine, structure 4  
 isopeptides 2  
 isopenicillin N synthase (IPNS) 194  
 IUPAC–IUB nomenclature rules 5
- kainic acid 12
- lanthionine 8  
 leucine, structure 4  
 lysine  
 side-chain acylation 8  
 side-chain methylation 8  
 structure 5  
 lysinoalanine 8  
 lysozyme 28
- Marfey's reagent 44, 59  
 Maillard reaction 53  
 mass spectra  
 amino acids 61  
 peptides 62  
 interpretation 65  
 derivatised peptides 71  
 MeBmt in cyclosporin 10  
 melittin, MS 75–6  
 metastable peaks in mass spectra 68  
 methionine  
 S-oxidation 8  
 S-alkylation 8  
 structure 5  
 methionyl bonds, selective cleavage of 107  
 methotrexate 201  
 methylDOPA 120
- methylvaline in dolastatin 15, 67  
 microcystins 18, 44  
 Miller–Urey amino acid synthesis 123  
 Mitsunobu reaction with serine 122
- N*-blocked peptides, MS sequencing 70  
*N*-methyl-D-aspartic acid 14  
 ninhydrin reaction of amino acids 52, 184  
 nerve-growth factor (NGF) 202  
 NMR 41  
 nomenclature of amino acids and peptides 4–7  
 norleucine 13  
 nylon(2) 3
- oligopeptide, definition 2  
 one-letter names for amino acids 4–5, 7–8  
 OPA derivatives of amino acids 58–9  
 organoboron amino acids 2  
 ornithine 8, 17  
 orthogonal group protection, in peptide synthesis 132  
 oxazol-5(4H)-ones (*see also* azlactones) 124, 128  
 oxytocin 201
- Parkinson's disease 12  
 partial hydrolysis of peptides 57, 72  
 penicillins and cephalosporins, biosynthesis from tripeptide 16, 192  
 pepstatin 205  
 peptide antibiotics 217  
 peptide bonds  
 evidence for in peptides and proteins 91  
 formation  
 using acid anhydrides 151  
 using acid chlorides and fluorides 151  
 using acyl azides 150  
 using carbodiimides 153  
 using phosphonium and isouronium derivatives 155  
 using reactive esters 153  
 peptide hormones 201  
 azapeptide analogues of 211  
 biosynthesis of 212  
 retropeptide analogues of 211  
 thionopeptide analogues of 210  
 peptide synthesis, and genetic engineering 132  
 enantiomerisation during, mechanisms of 146  
 methods of quantification 148  
 principles and strategy 130  
 using enzymes for 164  
 using solid-phase supports (SPPS) 156  
 apparatus for 163  
 linkers for 158  
 using a soluble handle 163
- peptides  
 abbreviated names 7  
 acid–base properties 32  
 circular dichroism 39–40  
 cyclic 10, 26, 168  
 C-terminal esterification 71

## Subject index

- definitions 2  
 derivatisation for MS 71  
 enzyme-linked immunosorbent assays (ELISAs) for 88  
 fragmentation after electron impact 62  
 general sources of information xiv–xv, 19  
 IR spectrometry 36  
 mass spectra 62 *et seq.*  
 metal-binding properties 34  
*N*-terminal acylation 71  
 NMR 41–7  
 primary structure 27, 29, 91 *et seq.*  
 radioimmunoassay methods for 87  
 reactions of amino group 49, 51  
 reactions of carboxy group 49, 53  
 routine spectrometry 35  
 secondary structure 27  
 tertiary structure 27  
 UV spectrometry 37  
 UV fluorescence spectrometry 37  
 peptoids 3  
 phenylalanine, structure 5  
 phosphate esters of amino acids 8  
 platelet-derived growth factor (PDGF) 202  
 poly(amide)s, definition 3  
 poly(amino acid)s, definition 3  
 poly(glycine) 7  
 poly(D-glutamic acid) 3  
 poly(L-glutamic acid) 39  
 polyamino-polyalcohols from peptides 72  
 polypeptide nomenclature 7  
 polypeptide, definition 2  
 post-translational processing of peptides 8, 11  
   acetylation 180  
    $\gamma$ -carboxylation of glutamate residues 180  
   location of 114  
   phosphorylation of serine and threonine residues 178, 180  
   C-terminal amide group formation 57, 181  
 prepropeptides 11  
 proinsulin 10–11  
 primary structure 27, 91 *et seq.*  
 pro-drugs 216  
 proline, structure 5  
 propeptides 11  
 protecting groups  
   for amide groups 145  
   for  $\alpha$ -amino groups 134  
   for  $\epsilon$ -amino groups 138  
   for guanidino groups 141  
   for hydroxy groups 140  
   for imidazole rings 142  
   for indole rings 146  
   for thioether groups 139  
   for thiol groups 139  
   removal 146  
 protein amino acids 3–5  
   nomenclature 7  
 protein biosynthesis, post-translational modification following 11, 178  
   role of amino acids 175  
   role of messenger RNA (mRNA) 176  
   role of transfer RNA (tRNA) 176  
 protein, definition 2  
 proteinases  
   inhibitors 204  
   mechanism of action 204  
 proteins, post-translational changes 11, 178  
 PTC amino acids in analysis 58  
 PTH derivatives of amino acids 60  
  
 quaternary structure 28  
 quisqualic acid 12  
  
 R/S convention 5  
 racemisation, amino acids in fossils 15–16  
 racemisation kinetics, amino acids 15  
 racemisation of amino acids 15, 56  
 random conformation, CD 39, 42  
 renin 203  
 resolution of DL-amino acids 125  
 retropeptides 211  
  
 Schiff base alkylation in amino acid synthesis 123  
 Schiff base formation from amino acids 50, 52  
 Schöllkopf synthesis of amino acids 127–8  
 secondary amino acids 7–8  
 secondary structure 27  
 sequenator 70  
 serine proteinases  
   irreversible inhibitors 208  
    $k_{\text{cat}}$  (suicide) inhibitors 209  
   mechanism of action 206  
   titrants for 208  
 serine, structure 5  
 $\beta$ -sheet 21–2  
   CD 40, 42  
 $\beta$ -sheet-promoting amino acids 3  
 statine 18, 205  
 Strecker synthesis of amino acids 123  
 sulphate esters of amino acids 8  
 sulphide formation from cysteine 8  
 sulphonamide drugs 200  
  
 taste of amino acids and peptides 14  
 taxol 18  
 tertiary structure 27  
 tertyrosine 8  
 thiono-peptides 210  
 three-letter names for amino acids 4, 7  
 threonine, structure 5  
 thyronine 202  
 thyrotropin 202  
 thyrotropin-releasing hormone (TRH) 202  
 thyroxine 202  
 torsion angles, peptide bond 21, 24  
   side-chain 24  
 transition-state inhibitors 205  
*trans*-peptide bonds 21
