220 *Index*

- Ehrenfest classification 78
 electro-crystallisation 10
 electroluminescence 192
 electron affinity 17, 37, 39, 51, 158, 199
 electronegativity 29
 electron–electron repulsion 19, 173
 electronic spectra, measurement 97
 and polymorphism 106
 crystal splitting 103
 electron microscopy 66
 electron–phonon coupling 150, 176
 electron spin resonance 62, 131, 161, 204
 electron transfer 1
 electrophotography 190
 energy transfer 1, 102, 110
 entropy 78
 etching 63, 140
 excited state lifetime 110
 exciton, concept 105
 diffusion coefficient 111, 186
 dissociation mechanisms 183
 impurity and defect effects on 109
 trap 51, 121, 141
 types of 108
 exhaustion region 165
 extrinsic conduction 161, 165
- Fermi–Dirac function 158, 176
 Fermi level 158ff
 fluorescence 62, 101, 110
 fluxional molecules 82
 frequency doubling 209
 Freundlich isotherm 179
 frontier orbital theory 37
- gas effects on conductivity 178
 geminate pairs 183
 geminate recombination 185
 grain boundaries 59, 94, 178, 179
- half-wave potentials 174, 199
 halogen–halogen interactions 47, 135
 heat capacity 78
 heat of sublimation 16, 94
 heterosoric stacks 25, 39ff
 highly conducting organic solids 169ff
 homosoric stacks 25, 39ff, 170
 hopping model 155ff
 hydration effects on organic metals 173
 hydrogen bonding 31
- impurity effects 41, 45, 50ff, 61, 101, 109,
 141, 156, 164ff, 183, 215
 incoherent excitons 107, 111
 increvalent complexes 34
 infra-red spectroscopy 88, 98
 intensity dependence of photocurrent 184
 intensity of optical absorption 98ff, 103,
 104, 112
 interdigitated electrodes 146
 inter-stack interactions 39ff, 139, 170
 intrinsic conduction 159ff
- junction potentials 161
- kinetics of gas effects on conductivity 181
 of solid-state reactions 121, 127
 Kohn anomaly 172
 Kramers–Kronig transformation 99
 Kubelka–Munk function 98
 Kyropoulos–Czocharlski method 9
- Lang camera 65
 Langmuir–Blodgett films 43ff, 140, 214
 laser force microscopy 69
 laser printers 190
 lattice energy calculations 20
 see also atom–atom potential
 layer packing 25
 libration 75
 lifetime, excited state 111
 fluorescence 102
 limitations of organic metals 178
 linewidth, NMR 79
 optical 106
 liquid crystals 45, 117, 182
 local packing density 138
 London forces 14
- magic angle NMR 81
 Maxwell–Boltzmann distribution 158, 176
 metallic conduction 169ff
 Meyer–Neldel rule 157
 microspectrophotometer 99
 mis-oriented molecules 53
 mobility, *see* charge-carrier mobility and
 drift mobility
 molecular electronics 116ff, 190, 204, 208ff
 molecular hyperpolarisability 212
 molecular orbital calculations 18, 112, 159,
 201
 multipole interactions 15
- n*– σ^* complexes 35
n–*v* complexes 34
 narrow-band model 176, 202
 see also band model
 neutron scattering 92
 non-extrinsic conduction 165, 167
 NMR, line width and second moment 79ff
 magic angle 81
 relaxation 60, 80
 nuclear quadrupole resonance 83
- Ohms law 162
 one-dimensional bands 52, 170, 176

- Onsager theory 185
 optical absorption length 100
 crystallography 63
 effective mass 115
 orbital symmetry 18, 37, 114
 organic ferromagnets 204
 organic metals 169ff, 200
 organic superconductors 176, 202
 orientational disorder 60, 76
 oriented gas model 102, 112
 oriented physical dimer model 113
 overlap and orientation principle 34ff
 overlap integral 17
- packing coefficient 22, 31
 packing density, local 138
 Pauli principle 19
 Peierls distortion 171, 176, 202
 pellets, defects in 59
 perturbation theory 17
 phase matching 212
 phase transitions 27, 70, 78, 198
 phonons 88ff, 150
 photo-acoustic spectroscopy 100
 photochemical polymerisation 121ff
 photoconductivity 169, 183ff
 photocopying 169, 183, 190
 photo-electrochemistry 183
 planar defects 56
 plastic crystals 28, 56, 85, 93
 point defects 52
 Poisson equation 161
 polarisation energy 51, 150, 159, 182
 polarised spectra 99, 113, 115, 116, 121
 polaron 155
 poled polymers 214
 pollution monitoring 178
 polymorphism 26, 33, 39, 42, 106, 120, 125, 213
 positron annihilation 70
 potential, repulsive 19
 atom-atom 20, 61, 94, 137, 141
 pre-biotic soup 140
 pseudo-intrinsic conduction 160ff
- quadrupole interactions 15, 28
 quadrupole resonance 83
 quantum yield 185, 188
- radioactive tracers 94
 Raman spectroscopy 88, 92
 rare-gas solids 93
 recombination 184
 reconstructive mechanism 121
 recrystallisation 2
 relaxation time, NMR 80
 dielectric 86
 re-orientation 52, 78ff
- repulsive forces 19, 28
 resolution using growth inhibitors 140
 reverse saturable absorption 117
 rigid-body motion 75
 Roberts-Schmidlin theory 164
- sacrificial complexes 35
 scanning probe microscopy 68
 scanning tunnelling microscopy 68
 Schmidt criterion 128ff
 screw dislocation 54
 second-harmonic generation 209
 self-assembly 43ff
 sensors 169, 178ff
 sheet packing 25
 slip plane 53
 small polaron 55
 solar cells 169, 183, 191, 204
 space-charge-limited conduction 62, 163ff
 stacking structures 24
 stacking faults 56
 strain 27, 55, 130, 141
 sublimation 62
 substituent effects on solid-state reactions
 124, 130, 135, 137
 superconductivity 176, 202
 surface conductivity 169, 178ff
 surface states 109
 symbiotic 185
 synchrotron topography 66
- thermal diffusivity 100
 thermalisation length 185
 topochemical reactions 120, 125ff
 topography 64
 topologically abnormal reactions 141
 torsional motion 75
 trap-filled limit 163
 trapping 50, 101, 110ff, 121, 141, 154, 163, 183
 triplet excitons 110
 tunnel model 157
 twinning 27, 58, 64
- vacancies 53, 70ff, 94
 van der Waals forces 16
 vapour-phase chromatography 62
 vibrational force constants 75
 vibrations 88, 150
- Wannier excitons 108ff
 water vapour and surface conductivity 183
 WORM memory systems 117
 X-ray diffraction 42, 58, 74ff, 125, 130, 200
 X-ray photo-electron spectroscopy 39
 X-ray topography 64
 X-traps 50, 109
- zone refining 4, 62
