

Index

- acetal formation, 120–1
 acids and bases, 31–43
 acyloin condensation, 162
 addition reactions, 158–68
 alcohols, 31, 116–17
 aldol reaction, 123, 161
 alkenes *see* olefins
 alpha effect, 47
 amides, 131–2
 amines, 124–31
 Arbuzov reaction, 145
 Arndt–Eistert synthesis, 110, 137
 aromatic substitution, 75–7, 187–94
 aromaticity, 22–5, 70–1, 80
 azides, 136
 azo compounds, 135
- Baeyer–Villiger rearrangement, 195–6, 216
 Beckmann rearrangement, 68–9, 133, 222
 benzene, 22–5
 nitration, 187
 nitrobenzene, 190–1
 N-substituted, 191–2
 benzoic anhydride, 236
 benzoyl chloride, 236
 benzyne mechanism, 193–4, 222–3
 bond strengths, 67–9
 bromination of olefins, 163–4, 215
 bromination of phenol, 188
 Brønsted acids and bases, 31–2, 39, 50
- Cannizzaro reaction, 161
 carbanions, 84–91
 carbenes, 107–11
 carbocations, 92–7
 carbon skeleton, 229–31
 carbonyl groups, 118–24, 167
 in addition reactions, 159–62
 in substitution reactions, 184–7
- catalysis by acids and bases, 41–4
cis and *trans* double bonds, 147
cis and *trans* ratio, 268–9
 Claisen ester condensation, 43, 123, 186
 Claisen rearrangement, 207
 cooking oils, 107
 Cope reaction, 177
 Cope rearrangement, 207
 curly arrows, 12–18
 Curtius rearrangement, 138, 214
 cyclic ketones, 195–6
 cyclization reactions, entropy, 72
 cycloadditions, 136, 137, 198, 199–201, 202–6,
 265
 [2+2]/[4+2] cycloadditions, 199–201
- Darzens condensation, 238–40
 decarboxylation, 54, 60, 214, 231, 233, 244
 dehydration of olefins, 65–6, 176, 249
 delocalization, 35–6, 86
 deuterium, 90, 216–17, 220–1, 266
 diastereoisomers, 147–8
 diazo compounds, 136–7
 diazomethane, 109, 136–7
 diazonium salts, 54, 127–9
 diazotization, 180–1
 dicyclohexylcarbodiimide (in ester formation),
 252–9
 Diels–Alder reaction, 67, 197, 202–5, 225
- E1/E2 reactions *see* elimination reactions
 electrocyclic reactions, 109, 198, 201, 206
 electrophiles, 30, 49–51, 231–2
 ambident, 51–2
 electrophilic addition, 163–6
 electrophilic substitution, 187–94
 elimination reactions, 169–78
 carbanions in, 91
 energy-level diagrams, 19–20, 48

INDEX

- enolate anions, 11–12, 14–15, 34, 46–7, 66–7, 85–6, 88–9, 122–3, 124, 142, 152–3, 161, 167
- enthalpy, 59–60
- entropy, 59–60, 71–2
- epoxides, 69, 165–6, 238–40
- equilibrium constants, 60–1
- ester hydrolysis, 43, 51, 77–8, 121–2, 186, 220, 244
- esterification, 42, 71–2, 144, 186
- ethers, 117–18
- extrusion reactions, 178
- Favorskii rearrangement, 259–62
- field effects, 37
- Fischer indole synthesis, 134, 222, 230
- free energy, 59–61
- free radical additions, 168
- free radicals *see* radicals
- Friedel–Crafts acylation, 193
- Friedel–Crafts alkylation, 97, 192–3, 214
- gas phase reactions, 35, 37, 38, 45, 48, 177
- Grignard reagents, 90–1, 151
- group I and II metals, 150–2
- halogens, 89, 148–50, 163–4
 in elimination reactions, 171
- Hammett equation/plots, 74–7, 224
- Hammond postulate, 64
- Hantzsch pyridine synthesis, 71
- hard and soft acids and bases, 39–41
- highest occupied molecular orbitals (HOMOs), 18–22, 40–1, 46–7, 98, 103–4
- Hofmann degradation, 130–1
- Hofmann elimination, 173–4
- Hofmann rearrangement, 138, 221–2
- Hückel rule, 24–5
- Hunsdiecker reaction, 233
- hybridization, 5–8, 36–7, 87
- hydrazines, 134–5, 240–1
- hydrazones, 132–3
- hyperconjugation, 12, 93, 100, 221
- imines, 132–3
- intermediates, 63–4
 in investigating mechanisms, 221–3
 Wheland, 188–9
- iodoform reaction, 186
- ionic reactions, 231
- isotopic labelling, 216–17
- kinetic isotope effect, 220–1
- kinetics, 59–62, 73–81
 in investigating mechanisms, 217–21,
- leaving groups, 52–6, 148–50
- Lewis acids and bases, 32, 39, 50
- lithium aluminium hydride, 132, 134
- Lossen rearrangement, 139
- lowest unoccupied molecular orbitals (LUMOs), 18–22, 40–1, 46–7, 98, 103–4
- Markovnikov addition, 164–5
- Michael addition, 51–2, 167
- neighbouring group participation, 180–1
- nitrenes, 137–9
- nitrogen as a heteroatom, 124–39
- nitro group, 176
 resonance structure, 133
- NMR, mechanism determination, 217
- nucleophiles, 30, 44–9, 231–2
 ambident, 46–7
 carbanions, 90
 oxygen heteroatoms, 115
- nucleophilic addition, 166–8
- olefins, 22, 165–6, 263–70
- orbital overlap, 79–80
- orbitals, 1–9, 18–25, 36–7
- oximes, 132–3
- oxygen as a heteroatom, 115–24, 143
- ozonolysis of olefins, 154, 263–70
- pericyclic reactions, 197–209, 231
- pH, 33, 120, 235–6
- phenol, bromination, 188
- phosphines, 144–5, 215
- phosphorus as a heteroatom, 144–8
- pK_a , 25, 33–7
- quantum numbers, 2–3, 19
- racemization, 182
- radicals, 97–107, 231
- Raney nickel, 140
- rate-determining step, 43, 219–220
 in substitution reactions, 180, 181
- rate equations, 218–20
- reaction profiles, 62–6
- rearrangement reactions, 96–7, 194–6
- reduction of olefins, 135, 250
- reduction reactions, aldehydes/ketones, 160–1
- resonance structures, 9–16, 93–4, 189–90
 nitro group, 133
- ring strain, 24, 69–70
- Sandmeyer reaction, 129
- Saytzeff elimination, 173–4, 175
- Schmidt reaction, 138
- Schotten–Baumann procedure, 127
- Schrödinger equation, 1, 4
- semibenzilic mechanism, 262
- sigmatropic rearrangements, 134, 198, 207
- silicon as a heteroatom, 152–4
- singly occupied molecular orbitals (SOMOs), 98–9, 103–5
- S_N1 , 129, 181–2
- S_N2 , 16, 129, 179–81, 183–4

INDEX

-
- solvent effects, 48–9
 in nucleophilic substitution, 180
 in pericyclic reactions, 197
stereochemistry
 in substitutions reactions, 179, 182
 in mechanism determination, 215–17, 269
steric effects, 77–9
substitution reactions, 178–94
sulphides/disulphides, 141–3, 215
sulphones/sulphonic acids/sulphoxides, 143
sulphonyl halides, 141, 144
sulphur as a heteroatom, 139–44
syn and *anti* forms, 269–70
- thermodynamics
 driving force, 233–4
 entropy, 71–2
 equilibrium constants, 60–1
 free energy, 59–60
- and kinetics, 59–62, 65–7
 reaction profiles, 62–3
 ring strain, 69–70
 transition states, 63–4
thioesters, 143
thiols/thioethers, 140–1
Tiffeneau–Demjanov reaction, 129
transition states, 63–4, 189
- Wagner–Meerwein rearrangements, 195
wavefunctions, 1–2, 75
Williamson ether synthesis, 31, 116–17
Wittig reaction, 144–8, 223
Wolff rearrangement, 110
Wolff–Kishner reduction, 240–1
Woodward–Hoffmann rules, 198–201
Wurtz coupling, 91, 151
- ylides, 87, 146–8
