7 Rounding out the picture of homicide	136
8 Problems in the study of victim-offender relationships	150
9 Towards a theoretical analysis of homicide	188
<i>References</i>	213
<i>Index</i>	218
 <i>Table: Forms of victim-offender relationships in homicide, Victoria, 1985–89</i>	 23

Acknowledgements

This research was supported by grants from the Australian Criminology Research Council. Throughout, the work has depended upon the close collaboration of Dr David Ranson, a forensic pathologist with the Victorian Institute of Forensic Pathology, who was responsible for the effective access that was gained to the Office of the Coroner of Victoria for the homicide data studied here. Dr Ranson participated in all stages of the research and was the co-author of the early research reports. He prepared major sections of Chapter 2 of this book, specifically those dealing with the homicide investigation and the role of the forensic pathologist in this process. This work could not have been done without the support of both Dr Ranson and the Victorian Institute of Forensic Pathology.

Several colleagues have helped in reviewing early drafts. Professor Don Gibbons of Portland State University has read sections of the manuscript, and has provided valuable advice through the years this work has taken. Margo Wilson and Martin Daly have given careful reading to drafts of the manuscript, and have been patient in their attempts to convey their important view of homicide. The exchange of ideas with the staff of the Institute for the Study of Social Change at the University of California, Berkeley, has been most helpful, and appreciation needs to be expressed to its Director, Professor Troy Duster, and others in that Institute such as David Minkus, David Wellman and Deborah Woo.

There were many research assistants who helped in collecting data from the files of the Office of the Coroner; these include Nick Hartland, David Ballek, Maj-Britt Englehardt, Santina Perrone and Hillary Little.

I am grateful for the constant support of Dr Christine Alder throughout the course of this research.

Excerpts from Wallace (1986), Katz (1988) and Daly and Wilson (1988) are reprinted with permission.
