

INDEX

(The numbers refer to the page where the term occurs for the first time or is defined)

- Absolutely irreducible variety, 68
- Algebraic correspondence, 89, 100
- Algebraic varieties, 3
 - system of, 57
- Algebraically closed field, 74
- (α, β) correspondence, 105
- Associative law of intersection in S_n , 165
- Automorphism
 - of extension over field, 66
 - of field, 66
- Base
 - for subvarieties of Grassmannian, 337
 - for subvarieties of a quadric, 238
 - for varieties, 194
- Bezout's theorem, 158
- Birational correspondence, 105
- Birational equivalence, 106
- Canonical form for
 - cubic ternary form, 118
 - equations of intersection of two quadrics, 287
 - pair of quadrics, 278
 - quadric, 204
- Carrier-variety of algebraic system, 113
- Cayley form, 33
 - algebraic conditions for, 51
 - of variety in r -way space, 97
- Cayley image of algebraic system, 113
- Characters, 361
- Class of curve and surface, 361
- Commutative law of intersection in S_n , 159
- Complete intersection of
 - $\Omega(d, n)$ and primal, 368
 - quadric and primal, 244
- Component
 - irreducible, of variety, 10
 - redundant, 10
- Condition for
 - Cayley form, 51
 - reducibility, 6
- Cone projecting a variety, 46
- Conjugate elements, 64
- Conjugate extensions, 64
- Conjugate points with regard to a quadric, 207
- Conjugate set of points, 27
- Conjugate spaces, 218
- Continuous system of varieties, 180
- Coordinates
 - non-homogeneous, 16
 - normalised, 16
- Correspondence
 - algebraic, 89, 100
 - birational, 105
 - determined by joining V_a to V_b , 154
 - image-points in, 102
 - irreducible, 100
 - object-points in, 102
 - reducible, 100
- Cross-join of two varieties, 154
- Degree of conjugacy, 218
- Dimension of a variety, 23
 - in r -way space, 92
- Direct product of two varieties, 146
- Distributive law of intersection in S_n , 160
- Dual of
 - quadric, 213
 - Schubert condition, 319
- Effective variety, 185
- Elementary enumerative characters, 361
- Elements, conjugate, 64
- Enveloping field, 2
- Equivalence (\equiv), 180
 - birational, 106
 - classes $[V_a]$, 184
 - in the narrow sense (\equiv), 182
 - in the virtual sense (\sim), 186
 - in the wide sense, 183
- Equivalent varieties, 180
- Extensions, conjugate, 64
- Field
 - algebraic closure, 74
 - algebraically closed, 74
 - automorphism of, 66

- Field (*cont.*)
 enveloping, 2
 intermediate, 66
 least normal extension of, 68
 normal extension of, 64
 stem, 63
 universal, 2
 Function field of a variety, 15
 Fundamental point of stereographic projection, 249
- Generic k -space, 16
 Generic point of a variety, 10
 Generic variety of irreducible system, 57
 Grade of a variety, 193
 Grassmann variety, 310
 Grassmannian, 310
- Homogeneous ideal, 8
- Ideal
 homogeneous, 8
 prime, 8
 Image-points in correspondence, 102
 Image-variety, 102
 Integrally closed ring, 123
 Intermediate field, 66
 Intersection
 associative law for, in S_n , 165
 commutative law for, in S_n , 159
 complete, of $\Omega(d, n)$ and primal, 368
 an intrinsic concept, 179
 of multiplicative varieties, 158
 rational, of two quadrics, 302
 of systems of equivalence, 191
 of systems of varieties, 173
 of two quadrics, 286
 of varieties, 4
 of V_a and V_b on V_n , 171
 Intersection-number of two varieties, 192
 Irreducible algebraic correspondence, 100
 Irreducible components of a variety, 10
 Irreducible varieties, 6
 Irregular points of stereographic projection, 249
 Isolated solution of set of equations, 117
- Laws of intersection on V_n , 173
 Least normal extension of field, 68
 Linear spaces on a quadric, 225
- Minimal base for varieties, 194
 Minimum function of algebraic element, 63
 Monoidal representation of variety, 63
 Multiplicative variety, 130
 Multiplicity
 of component, 130
 positive, 127
 of solution, 127
 zero, 127
- Non-contractible representation as sum of varieties, 10
 Non-homogeneous coordinates of point, 16
 Non-singular quadric, 205
 Norm of a variety, 61
 Normal extension of a field, 64
 Normal problem, 121
 Normalised coordinates, 16
- Object-points in algebraic correspondence, 102
 Object-variety, 102
 $\Omega(d, n)$
 Grassmann variety of d -spaces in S_n , 310
 complete intersection with primal, 368
 $\Omega_{a_0 a_1 \dots a_d}$, Schubert variety, 316
 Order
 of irreducible primal, 48
 of a variety, 41
 Orthogonal matrix, 258
- Parameter of algebraic system, 113
 Parametric representation of variety, 63
 Pencil of quadrics, 286
 in S_n ($n = 1, 2, 3$), 304
 Pieri's formula, 354
 Point
 generic, 10
 proper specialisation of, 91
 simple, of variety, 87
 singular, of variety, 87
 Points
 in algebraic correspondence, 100
 conjugate set of, 27
 conjugate, with regard to quadric, 207
 Polar prime, 208
 Polar r -ad, 221
 Polar space, 216
 Pole of prime, 215
 Positive multiplicity, 127

- Postulation of variety, 371
 Primal, 26
 order of, 48
 Prime, 26
 at infinity, 16
 ideal, 8
 passing through point, 22
 polar, 208
 pole of, 215
 Principle of
 conservation of the number, 127
 counting constants, 104
 Plücker-Clebsch, 116
 Projective characters, 361
 Proper specialisation, 91
 of multiplicative variety, 131
 Pure variety, 51

 Quadratic transformation, 106
 Quadric, 204
 complete intersection with primal,
 244
 dual of, 213
 envelope, 214
 non-singular, 205
 of type ρ , 205; alternative form,
 212
 touched along linear space, 217
 Quadrics, pencil of, 286
 Quotient ring of a point, 124

 Rational intersection of two quadrics,
 302
 Reducible algebraic correspondence,
 100
 Reducibility condition, 6
 Reducible varieties, 6
 Redundant component, 10
 Regular point of stereographic pro-
 jection, 249
 Relatively irreducible variety, 68
 Ring
 integrally closed, 123
 of equivalence systems, 192

 Schubert condition (a_0, a_1, \dots, a_d) , 316
 dual of, 319
 Schubert system, 316
 Schubert varieties
 of complementary dimension, 329
 $\Omega_{a_0 a_1 \dots a_d}$, 316
 representation A for, 322
 representation B for, 325
 σ_λ , 322
 special, 318
 Segre symbol of pencil, 289

 Segre variety, 95
 standard power-products for, 98
 Self-conjugate space, 218
 Self-polar simplex, 209
 Simple intersection along a variety,
 153, 170
 Simple point of a variety, 87
 Singular locus of a variety, 87
 Singular point of a variety, 87
 Space, independent of a point, 165
 Special Schubert varieties, 318
 Specialisation, proper, 91
 Standard power-products, 377
 for Segre variety, 98
 Stem field, 63
 Stereographic projection, 247
 irregular points of, 249
 Sum of varieties, 4
 System
 from projective transformation, 142
 of all k -spaces in S_n , 18
 of all k -spaces through a given space,
 19
 of equivalence $\{V_a\}$, 187
 of equivalence $\{V_a \cdot V_b\} = \{V_a\} \cdot \{V_b\}$,
 189
 of orthogonal matrices, 265
 of varieties, 57

 Tableau, 377
 Tangent space to variety, 88

 Universal field, 2
 Unmixed variety, 51

 Variety
 absolutely irreducible, 68
 algebraic, 3
 component, 9
 cone projecting a, 46
 contained in another, 5
 degenerated into two varieties, 145
 dimension of, 23
 dimension in r -way space, 92
 effective, 185
 function field of, 15
 generic point of, 10
 grade of, 193
 Grassmann, 310
 image-, 102
 in r -way space, 89
 irreducible, 6
 irreducible component of, 10
 lying in another variety, 5
 monoidal representation of, 63
 multiplicative, 130

394

INDEX

Variety (*cont.*)

- non-singular, 170
- norm of, 61
- object-, 102
- order of, 41
- order, characteristic property of, 61
- of order one, 48
- parametric representation of, 63
- postulation of, 371
- pure, 51
- reducible, 6
- relatively irreducible, 68
- Schubert, 316
- Segre, 95
- singular locus of, 87
- tangent space to, 88
- unmixed, 51

Varieties

- continuous system of, 180
- cross-join of two, 154
- direct product of two, 146
- equivalent, 180
- intersecting simply along a variety, 153, 170
- intersections of multiplicative, 158
- non-contractible representation of variety as sum of, 10
- sum of, 4
- Vertex of quadric, 207
- Virtual variety, 184
- Zero multiplicity, 127
- Zero variety, 185
- Z-space, 155
