BOOK III

*GENERAL THEORY OF ALGEBRAIC VARIETIES
IN PROJECTIVE SPACE*

CHAPTER X: ALGEBRAIC VARIETIES

	PAGE		PAGE
1. Introduction	1	9. The order of an algebraic variety; parametrisation	58
2. Reducible and irreducible varieties	4	10. Some algebraic lemmas	63
3. Generic points of an irreducible variety	10	11. Absolutely and relatively irreducible varieties	68
4. Generic members of systems of k -spaces	16	12. Some properties of relatively irreducible varieties	76
5. The dimension of an algebraic variety	22	13. Sections of an absolutely irreducible variety	78
6. The Cayley form of an algebraic variety	32	14. Tangent spaces and simple points	84
7. Properties of the Cayley form	35		
8. Further properties of the Cayley form	49		

CHAPTER XI: ALGEBRAIC CORRESPONDENCES

1. Varieties in r -way projective space	88	6. Systems of algebraic varieties and related correspondences	112
2. Segre's representation of r -way projective space	93	7. Normal problems	120
3. Two-way algebraic correspondences	100	8. Multiplicative varieties	129
4. The Principle of Counting Constants	103	9. A criterion for unit multiplicity	131
5. A special correspondence	108	10. Simple points	134

CHAPTER XII: INTERSECTION THEORY

1. Introduction	140	6. The intersection of irreducible varieties on a V_n in S_r	165
2. The degeneration of an irreducible variety in S_n	141	7. Intersection theory on a non-singular V_n	170
3. The product and cross-join of two irreducible varieties in S_n	145	8. Intersections of systems of varieties	173
4. The intersection of two irreducible varieties in S_n	156	9. Equivalence on an algebraic variety	180
5. Intersection theory in S_n	159	10. Virtual varieties	184
		11. Theory of the base	193

BOOK IV

QUADRICS AND GRASSMANN VARIETIES

CHAPTER XIII: QUADRICS

	PAGE		PAGE
1. Definitions and elementary properties	202	7. Stereographic projection	246
2. Quadric primals in S_n	206	8. The projective transformations of a quadric into itself	254
3. Polar theory of quadrics	216	9. The elementary divisors of orthogonal matrices	267
4. Linear spaces on a quadric, I	225	10. Pairs of quadrics	278
5. Linear spaces on a quadric, II	236	11. The intersection of two quadrics in S_n	286
6. The subvarieties of a quadric	238		

CHAPTER XIV: GRASSMANN VARIETIES

1. Grassmann varieties	309	6. The intersection formulae	352
2. Schubert varieties	316	7. Applications to enumerative geometry	359
3. Equations of a Schubert variety	321	8. Varieties of dimension $(n-d)(d+1)-1$ on $\Omega(d, n)$	367
4. Intersections of Schubert varieties: point-set properties	326	9. Postulation formulae for $\Omega_{a_1, a_2, \dots, a_d}$	371
5. The basis theorem	337
