

Contents

<i>Preface</i>	<i>page xi</i>
1 Introduction	1
2 Variability and frequency distributions	7
2.1 The normal distribution	7
2.2 The binomial distribution	12
2.3 The Poisson distribution	15
2.4 Other distributions	16
2.5 Means and variances: basic calculations	17
3 Estimation, standard errors and confidence limits	24
3.1 Sampling variation	24
3.2 The normal distribution	26
3.3 The binomial distribution	28
3.4 The Poisson distribution	29
4 The basic idea of a significance test	31
5 Simple significance tests based on the normal distribution	38
5.1 Comparison with a known standard	38
5.2 Comparison of means of two large samples	40

CONTENTS

5.3 The 'normal' approximations to binomial and Poisson distributions	43
5.4 One- and two-tailed tests	47
6 The use of t-tests for small samples	50
6.1 The importance of small samples	50
6.2 Comparison of sample mean with a standard (variance unknown)	51
6.3 Comparison of means of two small samples (unknown variances assumed equal)	55
6.4 Confidence limits	57
6.5 Comparison of means of two small samples (unknown variances not assumed equal)	58
7 Contingency tables and χ^2	61
7.1 Contingency tables	61
7.2 Special case of a table with only two rows	66
7.3 Special case of 2×2 tables	68
7.4 Exact test for 2×2 tables	71
7.5 Some fallacies in interpreting contingency tables	75
8 χ^2-tests of goodness-of-fit and homogeneity	77
8.1 Introduction to general idea	77
8.2 Testing the fit of a whole frequency distribution to data	79
8.3 Tests of homogeneity	82
8.4 Small samples from the normal, binomial and Poisson distributions	83
8.5 The additive property of χ^2 and the normal approximation	85
8.6 The meaning of very small χ^2 values	87
9 The correlation of measurements	89
9.1 The general notion of correlation	89
9.2 The calculation of an estimated correlation coefficient	92

CONTENTS	ix
9.3 Significance tests for correlation coefficients	98
9.4 General comments	101
10 Regression analysis	104
10.1 The basic idea of regression	104
10.2 The calculation of regression coefficients	108
10.3 Standard errors and significance tests	111
11 Simple experimental design and the analysis of variance	115
11.1 Introduction	115
11.2 Completely randomised designs	117
11.3 Randomised block designs	124
11.4 Testing the homogeneity of variances	130
11.5 General remarks	132
12 Introduction to factorial experiments	134
12.1 The factorial principle	134
12.2 Basic ideas and notation in the 2^n factorial	136
12.3 The analysis of variance for a 2^n factorial	138
12.4 The scope of more advanced designs	143
13 Random samples and random numbers	146
13.1 The need for random selection	146
13.2 The use of random numbers	150
13.3 Surveys and censuses	153
14 Partial correlation and multiple regression	156
14.1 Introduction	156
14.2 Partial correlation	157
14.3 Multiple regression with two independent variables	161
14.4 Multiple regression with more than two independent variables	166
15 Non-parametric and distribution-free tests	172
15.1 Introduction	172

x	CONTENTS	
	15.2 Paired comparisons	174
	15.3 Sign tests	176
	15.4 Wilcoxon's signed rank sum test for one sample	177
	15.5 Wilcoxon's rank sum test for two samples	181
	15.6 Rank correlation	184
	15.7 Concluding discussion	188
16	Notes on numerical calculation, calculators and computers	190
	16.1 Introduction	190
	16.2 How to avoid mistakes	191
	16.3 Relative numerical accuracy	192
	16.4 The precision of results and standard errors	195
	16.5 Choosing calculators and computers	197
	<i>Suggestions for more advanced reading</i>	203
	<i>Summary of statistical formulae</i>	204
	<i>Appendix tables</i>	242
	<i>Index</i>	252
