Preface	xi
List of notation	xv
1 Existence and uniqueness for diffusion processes	1
1.1 Stochastic processes and filtrations	1
1.2 Conditional expectation, martingales and stopping times	2
1.3 Markov processes and semigroups	4
1.4 Brownian motion	6
1.5 Itô processes	7
1.6 Stochastic integrals	11
1.7 Stochastic differential equations	17
1.8 The formulation of the martingale problem on R^d	25
1.9 The Cameron–Martin–Girsanov transformation and the martingale problem on R^d	27
1.10 The Stroock–Varadhan solution to the martingale problem on R^d	29
1.11 The generalized martingale problem on R^d	36
1.12 The martingale problem on $D \subseteq R^d$	39
1.13 The generalized martingale problem on $D \subseteq R^d$	41
1.14 The canonical construction and the definition of a diffusion process	43
1.15 The lifetime of a diffusion process and the definition of explosion	43
Exercises	44
2 The basic properties of diffusion processes	47
2.0 Introduction	47
2.1 Stochastic representation for solutions of elliptic equations and elliptic inequalities	48
2.2 The behavior of the exit time from a small ball	50
2.3 The Blumenthal 0–1 law and the regularity of boundary points	53
2.4 The Feynman–Kac formula	59
2.5 Proof of Theorem 1.5.1	61
2.6 The Stroock–Varadhan support theorem	65

2.7	Transience and recurrence for diffusions on R^d	68
2.8	Transience and recurrence for diffusions on $D \subseteq R^d$	74
	Exercises	75
3	The spectral theory of elliptic operators on smooth bounded domains	77
3.1	The spectral theory of compact operators	77
3.2	Maximum principles and the Schauder estimates	79
3.3	Existence and uniqueness for the Dirichlet problem	86
3.4	The semigroup and its generator on $\mathcal{B}_0 = \{u \in C(\bar{D}): u = 0 \text{ on } \partial D\}$	88
3.5	The spectrum of (L, \mathcal{D}_α) on $\mathcal{B}_\alpha \equiv \{u \in C^\alpha(\bar{D}): u = 0 \text{ on } \partial D\}$	91
3.6	The existence and the behavior of the principal eigenvalue	94
3.7	A mini-max variational formula for the principal eigenvalue	102
	Exercises	119
4	Generalized spectral theory for elliptic operators on arbitrary domains	123
4.0	Introduction	123
4.1	The h -transform	125
4.2	The Green's measure and the Green's function and criteria for their existence	129
4.3	Criticality and the generalized principal eigenvalue	144
4.4	The generalized principal eigenvalue: continuity properties and mini-max principles	156
4.5	Criteria for the finiteness or infiniteness of the generalized principal eigenvalue	163
4.6	Perturbation theory for critical and subcritical operators	164
4.7	$L - \lambda_c$ is critical if D is bounded and L is uniformly elliptic with bounded coefficients	176
4.8	Invariant measures and invariant functions for transition measures	179
4.9	The product L^1 property and its connection to the asymptotic behavior of the transition measure; positive and null recurrence	183
4.10	The product L^1 property and the existence of eigenfunctions in the symmetric case	193
4.11	Extension to the case where D is a non-compact open manifold or a compact manifold without boundary	196
	Exercises	200
5	Applications to the one-dimensional case and the radially symmetric multi-dimensional case	207
5.0	Introduction	207
5.1	Criticality properties	208

Contents

ix

5.2 The Laplacian perturbed by radially symmetric and compactly supported functions	219
Exercises	231
6 Criteria for transience or recurrence and explosion or non-explosion of diffusion processes	235
6.0 Introduction	235
6.1 The Liapunov method for transience, recurrence and positive recurrence	236
6.2 Application of the Liapunov method – Case I: uniformity in the non-radial variables	238
6.3 Application of the Liapunov method – Case II: non-uniformity in the non-radial variables	241
6.4 Transience and recurrence for diffusions corresponding to symmetric operators via the Dirichlet principle: a variational approach	255
6.5 A generalized Dirichlet principle for non-symmetric operators	261
6.6 Transience and recurrence for diffusions via the generalized Dirichlet principle: a mini-max approach	270
6.7 The Liapunov method and its application for explosion and non-explosion criteria	277
Exercises	279
7 Positive harmonic functions and the Martin boundary: general theory	283
7.0 Introduction	283
7.1 The Martin boundary	283
7.2 Conditioned diffusions and h -transforms and the behavior of a transient diffusion as it exits its domain	286
7.3 Positive solutions of minimal growth and applications to Green's functions and ground states	291
7.4 Harmonic measure for exterior regions	309
7.5 The exterior harmonic measure boundary	318
7.6 A characterization of the Martin boundary in terms of the exterior harmonic measure boundary	321
Exercises	330
8 Positive harmonic functions and the Martin boundary: applications to certain classes of operator	333
8.0 Introduction	333
8.1 The Martin boundary in the case of a Lipschitz Euclidean boundary	333
8.2 Periodic operators on R^d : positive harmonic functions and criticality, Martin boundary, behavior of λ_c under perturbations	347

x	<i>Content</i>	
8.3	Fuchsian operators and their adjoints	371
8.4	Auxiliary results I: explosion inward from the boundary	376
8.5	Auxiliary results II: operators in skew-product form	380
8.6	The Martin boundary for a class of operators in skew-product form: statement of general theorem, applications to particular cases and comparison principles	384
8.7	The Martin boundary for a class of operators in skew-product form: proof of general theorem	405
8.8	Some remarks	419
8.9	Survey of other results	422
	Exercises	427
9	Bounded harmonic functions and applications to Brownian motion and the Laplacian on a manifold of non-positive curvature	435
9.1	Probabilistic characterization of bounded harmonic functions	435
9.2	The connection between bounded harmonic functions and bounded solutions in exterior domains	439
9.3	Examples	442
9.4	Brownian motion on a manifold of non-positive curvature	444
9.5	Brownian motion on a model manifold of non-positive curvature: transience, recurrence, bounded harmonic functions, Martin boundary	447
9.6	Bounded harmonic functions on manifolds with curvature bounded between two negative constants	452
	Exercises	456
	References	461
	Index	471
