385

- conductance 337–44, 352–7
- control 334
- data presentation 136–7
- variation of characteristics 86–99, 129–47
 - whole-leaf level 129–47
- subpixel calibration 178–80
- subsistence agriculture 19–20
- sugar beet crop models 289
- SUITS 81
- support *see* spatial resolution
- surface albedo 61, 173, 229, 247, 349
- surface fluxes
 - modelling 229–49, 300
 - observations 319, 320, 347
- surface heat flux *see* heat flux modelling
- surface momentum *see* momentum flux modelling
- surface parameters 61, 229–49; *see also* land surface parameterisation
- surface partition into modelling units 304–8, 310–13, 315
- surface roughness 173
 - length 229, 238, 349
 - variation 234–5
- surface states 319
- surface temperature
 - and crop models 285, 288, 290
 - modelling 234–6
 - predicting plant community responses 108–9, 123
 - see also* heat flux; soil surface temperature
- SVAT *see* soil–vegetation–atmosphere transfer
