

## CONTENTS

---

Preface	<i>page</i> ix
<b>1 Analytic Preparations</b>	<b>1</b>
1.1 Inner Product, Norm, and Orthogonality of Functions	1
1.2 The Gradient and Beltrami Operator	5
1.3 Spherical Integration and Orthogonal Transformations	8
<b>2 Geometric Preparations</b>	<b>17</b>
2.1 Basic Features of Convex Sets	17
2.2 Support Functions	19
2.3 Metrics for Sets of Convex Bodies	27
2.4 Mixed Volumes and Mean Projection Measures	41
2.5 Inequalities	52
2.6 Difference Bodies, Projection Bodies, Steiner Point, and Centroid	55
<b>3 Fourier Series and Spherical Harmonics</b>	<b>60</b>
3.1 From Fourier Series to Spherical Harmonics	60
3.2 Orthogonality, Completeness, and Series Expansions	68
3.3 Legendre Polynomials	76
3.4 Some Integral Transformations and the Funk–Hecke Theorem	97
3.5 Zonal Harmonics and Associated Legendre Functions	118
3.6 Estimates and Uniform Convergence	126
<b>4 Geometric Applications of Fourier Series</b>	<b>133</b>
4.1 A Proof of Hurwitz of the Isoperimetric Inequality	133
4.2 The Fourier Expansion of the Support Function	139
4.3 The Isoperimetric and Related Inequalities	142
4.4 Wirtinger’s Inequality	148
4.5 Rotors and Tangential Polygons	154
4.6 Other Geometric Applications of Fourier Series	173

Cambridge University Press

978-0-521-47318-7 - Geometric Applications of Fourier Series and Spherical Harmonics

H. Groemer

viii

Contents

<b>5 Geometric Applications of Spherical Harmonics</b>	<b>181</b>
5.1 The Harmonic Expansion of the Support Function	181
5.2 Inequalities for Mean Projection Measures and Mixed Volumes	189
5.3 The Isoperimetric Inequality	195
5.4 Wirtinger's Inequality for Functions on the Sphere	213
5.5 Projections of Convex Bodies	219
5.6 Intersections of Convex Bodies with Planes or Half-Spaces	240
5.7 Rotors in Polytopes	259
5.8 Other Geometric Applications of Spherical Harmonics	295
References	311
List of Symbols	319
Author Index	323
Subject Index	326
