

Contents

	<i>Preface</i>	xvii
I	Inputs to the Standard Model	1
I.1	Quarks and leptons	1
I.2	Chiral fermions	4
	The massless limit	4
	Parity, time reversal, and charge conjugation	6
I.3	Symmetries and near symmetries	8
	Noether currents	8
	Examples of Noether currents	9
	Approximate symmetry	13
I.4	Gauge symmetry	14
	Abelian case	14
	Nonabelian case	15
	Mixed case	17
I.5	On the fate of symmetries	18
	Hidden symmetry	19
	Spontaneous symmetry breaking in the sigma model	21
II	Interactions of the Standard Model	24
II.1	Quantum Electrodynamics	24
	U(1) gauge symmetry	25
	QED to one loop	27
	On-shell renormalization of the electric charge	32
	Electric charge as a running coupling constant	33
II.2	Quantum Chromodynamics	36
	SU(3) gauge symmetry	36
	QCD to one loop	41
	Asymptotic freedom and renormalization group	47
II.3	Electroweak interactions	52
	Weak isospin and weak hypercharge assignments	52

x	<i>Contents</i>	
	SU(2) _L × U(1) _Y gauge-invariant lagrangian	54
	Spontaneous symmetry breaking	56
	Electroweak currents	58
II.4	Fermion mixing	60
	Diagonalization of mass matrices	60
	Quark mixing	63
	CP-violation and rephasing-invariants	65
III	Symmetries and anomalies	69
III.1	Symmetries of the Standard Model	69
III.2	Path integrals and symmetries	72
	The generating functional	73
	Noether's theorem and path integrals	74
III.3	The U(1) axial anomaly	75
	Diagrammatic analysis	77
	Path integral analysis	81
III.4	Classical scale invariance and the trace anomaly	88
III.5	Chiral anomalies and vacuum structure	91
	The θ-vacuum	92
	The θ-term	94
	Connection with chiral rotations	95
IV	Introduction to effective lagrangians	97
IV.1	Nonlinear lagrangians and the sigma model	97
	Representations of the sigma model	98
	Representation independence	100
IV.2	Integrating out heavy fields	102
	The decoupling theorem	102
	Integrating out heavy fields at tree level	103
IV.3	The low energy expansion	105
	Expansion in energy	105
	Loops	106
	Weinberg's power counting theorem	108
IV.4	Symmetry breaking	109
IV.5	PCAC	111
	The soft-pion theorem	111
IV.6	Matrix elements of currents	113
	Matrix elements and the effective action	114
IV.7	Heavy particles in effective lagrangians	116
IV.8	Effective lagrangians in QED	119
IV.9	Effective lagrangians as probes of new physics	121
V	Leptons	126
V.1	The electron	126

Cambridge University Press

0521476526 - Dynamics of the Standard Model

John F. Donoghue, Eugene Golowich and Barry R. Holstein

Table of Contents

[More information](#)

	<i>Contents</i>	xi
	Breit-Fermi interaction	126
	QED corrections	129
	The infrared problem	134
V.2	The muon	136
	Muon decay at tree-level	137
	Photon radiative corrections	138
V.3	The tau	143
	Inclusive decays	144
	Exclusive leptonic decays	145
	Exclusive semileptonic decays	146
V.4	The neutrinos	149
	Neutrino oscillations	150
	Terrestrial searches for neutrino mixing	151
	Solar neutrinos	151
	Dirac mass and Majorana mass	154
VI	Very low energy QCD - pions and photons	157
VI.1	QCD at low energies	157
	Vacuum expectation values and masses	158
	Pion leptonic decay and F_π	159
VI.2	Chiral perturbation theory to one loop	163
	The order E^4 lagrangian	164
	The renormalization program	166
VI.3	Interactions of pions and photons	170
	The pion form factor	170
	Rare pion processes	174
VI.4	Pion-pion scattering	177
VI.5	The axial anomaly and $\pi^0 \rightarrow \gamma\gamma$	181
VI.6	The physics behind the QCD chiral lagrangian	183
VII	Introducing kaons and etas	188
VII.1	Quark masses	188
VII.2	Higher order analysis of decay constants and masses	191
	Ambiguities in mass parameters	192
	Decay constants	193
	Masses	194
VII.3	The Wess-Zumino-Witten anomaly action	196
VII.4	The $\eta'(960)$	201
	$\eta_0 - \eta_8$ mixing	204
VIII	Kaons and the $\Delta S = 1$ interaction	208
VIII.1	Leptonic and semileptonic processes	208
	Leptonic decay	208
	Kaon beta decay and V_{us}	209

xii	<i>Contents</i>	
	The decay $K \rightarrow \pi\pi e\bar{\nu}_e$	212
VIII.2	The nonleptonic weak interaction	213
VIII.3	Short distance behavior	216
	Short distance operator basis	216
	Perturbative analysis	217
	Renormalization group analysis	218
VIII.4	The $\Delta I = 1/2$ rule	222
	Phenomenology	222
	Chiral lagrangian analysis	225
	Vacuum saturation	227
VIII.5	Rare kaon decays	228
IX	Kaon mixing and CP violation	232
IX.1	K^0 - $\bar{K}^0$ mixing	232
	Mass matrix phenomenology	232
	Box diagram contribution	235
IX.2	The phenomenology of kaon CP violation	238
IX.3	Kaon CP violation in the Standard Model	242
	Analysis of ϵ	243
	Penguin contribution to ϵ'	243
	Additional contributions to ϵ'	246
IX.4	Electric dipole moments	250
IX.5	The strong CP problem	252
	The parameter $\bar{\theta}$	253
	Connections with the neutron electric dipole moment	254
X	The N_c^{-1} expansion	258
X.1	The nature of the large N_c limit	258
X.2	Spectroscopy in the large N_c limit	260
X.3	Goldstone bosons and the axial anomaly	263
X.4	The OZI rule	265
X.5	Chiral lagrangians	267
X.6	Weak nonleptonic decays	269
XI	Phenomenological models	273
XI.1	Quantum numbers of $Q\bar{Q}$ and Q^3 states	273
	Hadronic flavor-spin state vectors	274
	Quark spatial wavefunctions	277
	Interpolating fields	279
XI.2	Potential model	280
	Basic ingredients	281
	Mesons	282
	Baryons	283
	Color dependence of the interquark potential	284

<i>Contents</i>	xiii
XI.3 Bag model	285
Static cavity	286
Spherical cavity approximation	286
Gluons in a bag	289
The quark-gluon interaction	290
A sample fit	291
XI.4 Skyrme model	292
Sine–Gordon soliton	292
Chiral $SU(2)$ soliton	293
The Skyrme soliton	295
Quantization and wavefunctions	297
XI.5 QCD sum rules	302
Correlators	302
Operator product expansion	305
Master equation	306
Examples	307
XII Baryon properties	313
XII.1 Matrix element computations	313
Flavor and spin matrix elements	313
Overlaps of spatial wavefunctions	315
Connection to momentum eigenstates	316
Calculations in the Skyrme model	319
XII.2 Electroweak matrix elements	321
Magnetic moments	321
Semileptonic matrix elements	324
XII.3 Symmetry properties and masses	325
Effective lagrangian for baryons	326
Baryon mass splittings and quark masses	327
Goldberger–Treiman relation	329
The nucleon sigma term	330
Strangeness in the nucleon	332
Quarks and their spins in baryons	333
XII.4 Nuclear weak processes	336
Measurement of V_{ud}	336
The pseudoscalar axial form factor	337
XII.5 Hyperon semileptonic decay	339
XII.6 Nonleptonic decay	341
Phenomenology	341
Lowest-order chiral analysis	343
Quark model predictions	345
XIII Hadron spectroscopy	350
XIII.1 The charmonium and bottomonium systems	350

xiv	<i>Contents</i>	
	Transitions in quarkonium	356
XIII.2	Light mesons and baryons	360
	SU(6) classification of the light hadrons	360
	Regge trajectories	363
	SU(6) breaking effects	365
XIII.3	The heavy-quark limit	370
	Heavy-flavored hadrons in the quark model	370
	Spectroscopy in the $m_Q \rightarrow \infty$ limit	372
XIII.4	Nonconventional hadron states	375
	Gluonia	376
	Additional nonconventional states	379
XIV	Weak interactions of heavy quarks	382
XIV.1	Heavy quark lifetimes and semileptonic decays	382
	The spectator model	382
	Beyond the spectator model	384
	Inclusive <i>vs.</i> exclusive models for $b \rightarrow ce\bar{\nu}_e$	386
	The $b \rightarrow ue\bar{\nu}_e$ transition	387
	The top quark	389
XIV.2	Weak decays in the heavy-quark limit	391
XIV.3	B^0 - $\bar{B}^0$ and D^0 - $\bar{D}^0$ mixing	395
	B^0 - $\bar{B}^0$ mixing	395
	D^0 - $\bar{D}^0$ mixing	398
XIV.4	The unitarity triangle	399
XIV.5	<i>CP</i> violation in <i>B</i> mesons	400
	CP-odd signals induced by mixing	401
	CP-odd signals not induced by mixing	407
XIV.6	Rare decays of <i>B</i> mesons	409
	The quark transition $b \rightarrow s\gamma$	410
	The hadron transition $B \rightarrow K^*\gamma$	412
XV	The Higgs boson	415
XV.1	Mass and couplings of the Higgs boson	415
	The naturalness problem	418
XV.2	Production and decay of the Higgs boson	419
	Decay	419
	Production	420
XV.3	The possibility of a strongly interacting Higgs sector	423
	The equivalence theorem	424
	Scattering of longitudinal gauge bosons	427
XVI	The electroweak gauge bosons	430
XVI.1	Neutral weak currents at low energy	430
	Neutral current effective lagrangians	431

<i>Contents</i>	xv
Determination of the weak mixing angle θ_w	432
Definitions of the weak mixing angle	435
XVI.2 Phenomenology of the $W^\pm$ and Z^0 gauge bosons	439
Decays of $W^\pm$ into fermions	440
Decays of Z^0 into fermions	442
Asymmetry measurements	442
The number of light neutrino generations	445
The VWW vertex	446
XVI.3 The quantum electroweak lagrangian	448
Gauge-fixing and ghost fields in the electroweak sector	448
A subset of electroweak Feynman rules	449
On-shell determination of electroweak parameters	451
XVI.4 Self-energies of the massive gauge bosons	452
The charged gauge bosons $W^\pm$	453
The neutral gauge bosons Z^0, γ	455
XVI.5 Examples of electroweak radiative corrections	456
The $\mathcal{O}(G_\mu m_t^2)$ contribution to $\Delta\rho$	457
The $\mathcal{O}(G_\mu m_t^2)$ contribution to Δr	458
The $Z \rightarrow b\bar{b}$ vertex correction	460
XVI.6 Beyond the Standard Model	461
A Appendix – Functional integration	468
A.1 Quantum mechanical formalism	468
Path integral propagator	468
External sources	471
The generating functional	472
A.2 The harmonic oscillator	474
A.3 Field theoretic formalism	476
Path integrals with fields	477
Generating functional with fields	478
A.4 Quadratic forms	480
Background field method to one loop	482
A.5 Fermion field theory	483
A.6 Gauge theories	486
Gauge fixing	487
Ghost fields	490
B Appendix – Some field theoretic methods	495
B.1 The heat kernel	495
B.2 Chiral renormalization and background fields	499
C Appendix – Useful formulae	505
C.1 Numerics	505
C.2 Notations and identities	505
