

Index

- Abbe *V*-value, 9
 Aberrations, 23, 97–130, 601–646, 793
 of the eye, 673–694
 higher order, 101, 113, 126, 627, 630
 longitudinal, 99–100, 634–638
 measurement of, 622–624
 primary, 101, 126, 627–629
 Seidel, *see* Seidel aberrations
 transverse, 99–100, 631–634
 wave, 99–100, 624–638
 Aberrations, chromatic, 109–111, 794
 longitudinal, 109–110
 transverse, 111
 Aberrations, finite (exact), 623–624
 longitudinal, 623
 transverse, 623
 wave, 624
 Aberrations, monochromatic, 101–109
 astigmatism, 104, 794
 coma, 103, 795
 distortion, 108, 796
 field curvature, 107, 797
 Petzval curvature, 107–108
 spherical, *see* Spherical aberration
 Absorption, 283
 Accommodation, 293
 amplitude, 294
 instrument, 699
 Accommodation/convergence
 AC/A ratio, 596
 AC/A response, 734
 demands of instruments, 732–735
 relationships, 595
 Achromatic condition, 615
 Achromatic doublet, 150, 615–618, 793
 Achromatizing correcting lens, 686
 Aerial, 793
 Afocal, 60, 80, 793
 Afocal systems, matrix analysis of,
 769–772
 Air lens, 149
 Airy disc, 544, 656, 793
 Alvarez lens, 147–148
 Amblyopia, 793
 Ametropia, *see* Refractive errors
 Amplitude of accommodation, 294
 Anaglyphs, 598
 Anamorphic lens, 151
 Angle measuring instruments, 445–447
 sextant, 446
 theodolite, 445
 Angle of deviation, 18
 prism, 175–177
 Aniseikonia, 794
 Aperture radius, 794
 Aperture stop, 205, 207–208, 793
 Aplanatic surface, 606
 Apochromats, 616
 Aspheric surface, 116, 619–623
 Cartesian (Descartes) oval, 119
 conicoid, 116–118, 619–620
 effect on Seidel aberrations, 619–623
 figured conicoid, 118, 622
 Aspheric surfaced lenses, 138
 Asphericity, 116
 Astigmatism of the eye, 297
 Auto-collimating telescope, 405
 Auto-collimation, 265
 Axis, optical, 21, 26, 799
 of the eye, 293
 Axis, visual, 293
 Back focal point, 52, 764–765
 Back principal plane, 56–57
 Back principal point, 55, 764–765
 of thick lens, 55
 Badal optometer, 577–583
 alternative constructions, 579–582
 and eye positions, 582
 simple, 578
 Badal principle, 336, 577–578
 Barlow lens (tele-converter lens), 459,
 794
 Beams, 12
 Becke line method, 252
 Bessel function, 543
 Binoculars, 407
 and binocular convergence, 739–740
 stereoscopic magnification, 735–738
 Binocular vision, 311–312, 794
 accommodation and convergence,
 311–312
 fusion, 595
 simultaneous foveal perception, 595
 simultaneous perception, 595
 stereopsis, 595
 and visual ergonomics, 727–745
 Binocular vision, testing instruments,
 595–598
 anaglyphs, 598
 stereoscopes, 597
 synoptophore, 596–597
 Bioculars, 329, 350–352, 729
 aberrations, 355–356
 head-up displays, 350
 magnification limits, 351–352
 tolerances to aberrations, 744
 Blind spot, 293
 Blur disc, *see* Defocus blur disc
 Boroscopes, 434
 Bravais points, 794
 Camera lenses
 aberrations, 473–474
 apertures and pupils, 460–461
 depth-of-field, 465–468
 field-of-view, 453–454
 F-number, 460–461
 focussing range, 469
 F-stops, 461
 hyperfocal distance, 468
 inverse telephoto, 456, 458–459, 798
 telephoto, 456–457, 801
 Cameras
 and film plane illuminance, 461–464
 single lens reflex, 471–472
 viewfinders of, 469–472
 Cardinal points, 72–74, 763–768, 794
 focal, 52, 72, 764–766, 797
 of lens, 135–136
 macroscopes, 415–416
 measurement, 267–268
 microscopes, 360–361
 nodal, 73–74, 765–766, 798
 principal, 73, 764–765
 Cartesian (Descartes) oval, 119
 Cascaded systems, 79, 216–218
 Cassegrain telescope, 378
 Catadioptric, 87, 93, 153, 794
 Catoptric, 87, 153, 794
 Cauchy formula, 9
 Caustic curve, 103
 Centre of rotation of the eye, 136, 311,
 731
 Chromostereopsis, 687
 Circle of least confusion, 106
 Coherence, 509–514, 794
 spatial, 512
 temporal, 512–513
 Coherent imaging, 794
 Coherent light, 513, 795
 Cold light source, 440
 Collimation (and collimators), 487–495,
 795
 aberrations of, 494
 and auto-collimation, 491
 design, 494
 precision in, 491–492
 visual, 490–492
 Colorimeters, 498–501
 Colour fringing, 182
 Compensating plate, 522
 Condensor, 138, 220, 795
 Cones, 290
 Conicoid, 116–118, 619–620
 ellipsoid, 116–117
 paraboloid, 116–117
 Conjugate points, 22, 795
 Contact lenses, 324
 aberrations, 325
 Contrast, 795

- Contrast threshold function of the eye, 691
 Cornea, 291, 795
 Cos⁴ law, 286
 Coupling of eye and optical system
 coherent, 714–716
 incoherent, 716
 Critical angle, 18, 247–248, 795
 Crossed torics (or crossed cylinders), 145–146
 Curvature (of a surface), 32, 795
 measurement by contact methods, 257–260
 measurement by non-contact methods, 257, 260–262
 Cylindrical lens and axis, 143
- Defocus, 225–243
 quantification, 225
 sources, 227–230
 Defocus blur disc, 225–226, 230–234, 236–237
 of eye, 304–305
 model, 701–702
 Density, 795
 Depth-of-field/focus, 225, 235–237
 of afocal systems, 704
 cameras, 465–468
 of eye, 304–306
 geometrical approximation, 236–237
 hyperfocal distance, 468
 of microscopes, 703
 of simple magnifiers, 703
 Diaphragm, 460
 Dielectric, 795
 Diffraction, 24, 527–553, 795
 and aberrations, 547–548
 Airy disc, 544, 656, 793
 circular aperture, 542–547
 efficiencies of Fresnel zone plate, 536–540
 Fraunhofer, 541–547, 796
 Fresnel, 532–540, 795
 Fresnel zones and zone plate, 532–540
 Huygens' principle, 530
 Kirchhoff integral, 530–531
 laser speckle, 241, 540–541, 587
 single slit pattern of, 547
 Young's boundary wave, 548–550
 Diffraction grating, 548–552
 angular dispersion, 550–551
 resolving power, 551–552
 Diffuse, 796
 Diffuser, perfect, 274
 Dioptre, 34, 796
 Diplopia, 596, 796
 Disc of least confusion, 639
 Dispersion, 8–10, 109, 796
 principal, 10
 of a prism, 182–183
 Dissociation, 796
 Doubling of image, 184–186
 Drysdale principle, 260, 561–562
 Duochrome test, 587, 686
- Edge spread function, 660
 Electromagnetic radiation
 amplitude, 5
 complex representation, 5
 frequency, 5, 7
 intensity, 5
 wavelength, 5, 7
 Emmetropia, 295, 796
 Endoscopes, 433
 Equivalent focal length, 74–75
 Equivalent power, 53–55, 751–752, 799
 component, 752–753
 measurement, 262–265
 thick lens, 53–55, 59
 Equivalent viewing distance, 332, 334–335
 Exposure, 461, 796
 correction factor, 463
 Eye, 291–316
 and ametropia (refractive errors), 295–300
 axes, 293
 blind spot, 293
 centre of rotation of, 136, 311, 731
 depth-of-field of, 304–306
 optic disc of, 293
 photometry of, 308–311
 pupil, entrance, 300–302
 pupil, exit, 300
 and refractive errors (ametropia), 295–300
 and visual acuity, 302–304
 Eye, aberrations of, 673–694
 chromatic, 681–687
 monochromatic, irregular, 680–681
 monochromatic, regular, 674–680
 Eye, retinal image quality of, 687–691
 contrast threshold function, 691
 line spread function, 689–690
 modulation transfer function, 690–691
 point spread function, 689–690
 Eye, schematic, 307–308, 777–792
 finite (wide angle), 308, 674
 paraxial, 307, 674
 Eye lens, 308, 344, 796
 Eye relief, 218, 323, 704–706, 796
 Keplerian telescope, 383
 microscopes, 366–367
 Eyepieces, 344–348, 796
 aberrations of, 355
 eye lens in, 344
 field lens in, 344, 385
 Huygens, 346
 micrometer, 347
 in microscopes, 371
 negative power, 348
 Ramsden, 346
- Far point, 294, 796
 Fermat's principle, 13–14, 112
 Field expanders, 407
 Field flattener, 220
 Field lens, 218–220, 797
 and aberrations, 220
 and field-of-view, 218–220
 in eyepieces, 344, 385
- Field of half illumination, 205
 Field-of-view of
 bioculars, 351
 camera lenses, 453–454
 field lens, 218–220
 Galilean telescopes, 392–394
 Keplerian telescopes, 386–388
 microscopes, 369
 monocular systems, 700
 simple magnifiers, 339–342
 Field stop, 206, 220, 797
 Film exposure, 461–464
 Fincham coincidence optometer, 589–590
 Finite (real) ray, 21, 27–31, 800
F-number, 214, 796
 and camera lenses, 460–461
 Focal, 797
 Focal lengths, 52, 797
 equivalent, 74–75
 measurement, 262–266
 vertex, 55–56, 74–76
 Focal points, 52, 72, 764–765, 797
 Focimeter, 266, 557–560, 797
 and astigmatism measurement, 558
 collimation errors, 519
 principle, 266–267, 557–558
 and prism power measurement, 559
 and residual power in telescope measurement, 559
 Foco-collimator method, 264–265
 Focus, 797
 Focussing techniques, 238–242
 effect of aberrations, 242
 knife-edge (Foucault method), 240, 643
 laser speckle, 241, 540–541, 587
 rangefinding, 241
 Scheiner principle, 240–241, 588
 simple perception of blur, 238, 586
 split image, 239–240, 589
