

Contents

1	Rings, homomorphisms, ideals	1
1.1	Ideals. Quotient rings	2
1.2	Operations on ideals	6
1.3	Prime ideals and maximal ideals	7
1.4	Nilradicals and Jacobson radicals	10
1.5	Comaximal ideals	11
1.6	Unique factorization domains (UFDs)	12
1.7	Exercises	14
2	Modules	17
2.1	Submodules. Homomorphisms. Quotient modules	18
2.2	Products and direct sums	20
2.3	Operations on the submodules of a module	21
2.4	Free modules	22
2.5	Homomorphism modules	24
2.6	Finitely generated modules	25
2.7	Exercises	28
3	Noetherian rings and modules	29
3.1	Noetherian rings	29
3.2	Noetherian UFDs	31
3.3	Primary decomposition in Noetherian rings	32
3.4	Radical of an ideal in a Noetherian ring	33
3.5	Back to primary decomposition in Noetherian rings	34
3.6	Minimal prime ideals	35
3.7	Noetherian modules	36
3.8	Exercises	37
4	Artinian rings and modules	39
4.1	Artinian rings	39
4.2	Artinian modules	43
4.3	Exercises	43

5	Finitely generated modules over Noetherian rings	45
5.1	Associated prime ideals	45
5.2	Finite length modules	48
5.3	Finitely generated modules over principal ideal rings	51
5.4	The Artin–Rees lemma and Krull’s theorem	55
5.5	Exercises	56
6	A first contact with homological algebra	59
6.1	Some abelian categories	59
6.2	Exact sequences	61
6.3	Tensor products and homomorphism modules	65
6.4	Dualizing module on an artinian ring	68
6.5	Gorenstein artinian rings	73
6.6	Exercises	75
7	Fractions	79
7.1	Rings of fractions	79
7.2	Fraction modules	82
7.3	Support of a module	86
7.4	Localization of ideals	92
7.5	Localization and UFDs	94
7.6	Localization and primary decomposition	96
7.7	Back to minimal prime ideals	98
7.8	Localization and associated prime ideals	99
7.9	Exercises	101
8	Integral extensions of rings	103
8.1	Algebraic elements, integral elements	103
8.2	Finite extensions, integral extensions	105
8.3	Going-up and going-down theorems	108
8.4	Exercises	112
9	Algebraic extensions of fields	113
9.1	Finite extensions	113
9.2	K -isomorphisms in characteristic zero	116
9.3	Normal extensions	117
9.4	Trace and norm	121
9.5	Roots of one and cyclic Galois groups	123
9.6	Exercises	126
10	Noether’s normalization lemma	129
10.1	Transcendence degree	129
10.2	The normalization lemma	130
10.3	Hilbert’s Nullstellensatz	133

vii

10.4	Jacobson rings	136
10.5	Chains of prime ideals in geometric rings	136
10.6	Height and dimension	138
10.7	Dimension of geometric rings	141
10.8	Exercises	143
11	Affine schemes	145
11.1	The affine space \mathbb{A}_n	145
11.2	Affine schemes	147
11.3	Closed and open subschemes of an affine scheme	149
11.4	Functions defined on an open set	153
11.5	Dimension of an affine scheme	155
11.6	Irreducible components of an affine scheme	156
11.7	Exercises	157
12	Morphisms of affine schemes	159
12.1	Morphisms of affine schemes	159
12.2	Immersion of affine schemes	161
12.3	Local description of a morphism	164
12.4	Product of affine schemes	165
12.5	Dimension, product and intersection	167
12.6	Dimension and fibres	169
12.7	Finite morphisms	170
12.8	Exercises	171
13	Zariski's main theorem	173
13.1	Proof of Zariski's main theorem	174
13.2	A factorization theorem	178
13.3	Chevalley's semi-continuity theorem	178
13.4	Exercises	181
14	Integrally closed Noetherian rings	183
14.1	Reduced Noetherian rings	183
14.2	Integrally closed Noetherian rings	185
14.3	Discrete valuation rings. Dedekind rings	187
14.4	Integral extensions of Noetherian domains	190
14.5	Galois group and prime ideals	192
14.6	Exercises	194
15	Weil divisors	197
15.1	Weil divisors	197
15.2	Reflexive rank-one modules and Weil divisors	201
15.3	Exercises	209
