

Index

- Bénard problem 112–119
- bifurcation
 - definition 80
 - equation 91
 - for a variational operator 106
 - from a multiple eigenvalue 101–104
 - from an odd eigenvalue 105
 - from a simple eigenvalue 91–101
 - global 105–106
 - Hopf 135–139
 - necessary condition 80
 - subcritical 97
 - supercritical 97
 - transcritical 97
- bifurcation of periodic solutions 136–159
 - definition 137
- bifurcation problems 107–135
- buckling of an elastic beam 86–89
- composite-map formula 11
- conservative systems 147
- derivative
 - Fréchet 12
 - higher 23–26
 - partial 26–29
- differential
 - Fréchet 9–10
 - Gateaux 12
- differentiation rules 11–12
- Dirichlet problems
 - asymptotically linear 52–54
 - at resonance 62–71
 - bifurcation 99
 - boundary value 5
 - semilinear 61–78
 - with asymmetric nonlinearities 71–78
- eigenspace 2
- eigenvalue
 - comparison property 6
 - continuity property 7
 - existence 6
 - of a linear elliptic problem 6
 - of a linear operator 2
 - variational characterization 7
- eigenvector 2
- elliptic operator 5
- first integral 146–147
- functional 12
- Fréchet derivative 12
 - differential 10
- Fredholm alternative 2
- Gateaux differential 12
- global inversion 45–60
 - theorem 47–52
 - with singularity 54–59
- gradient 12
- gradient systems 147
- Green operator 6
- Hamiltonian systems 147, 151
- Hopf bifurcation 136
- Hopf bifurcation theorem 144
 - abstract 137–138
- Hölder spaces 3–4
- hyperbolic semilinear equation 130–135
- implicit function theorem 36–38
- inverse of a linear map 30–31
- inversion
 - along a path 48
 - global 46–52
 - global with singularities 54–59
 - local 30–36

- L^p spaces 3
- local inversion 30–36
 - theorem 32–33
- Lyapunov centre theorem 148–150
- Lyapunov–Schmidt reduction 89–91
- manifold of codimension one 55
- maximum principle 7–8
- mean-value theorem 13
- minimal surface 35–36
- multiplicity
 - algebraic 3
 - geometric 3
- Nemitski operator 15–22
 - continuity 16–17
 - differentiability 17–20
- operator
 - compact 2
 - Green 6
 - linear 2
 - Nemitski 15–22
 - potential 12, 21–22
 - variational 12, 106
- oscillations
 - of autonomous systems 139–145
 - small, for second order systems 119–123
 - small in the 3-body problem 154–157
 - small near an equilibrium 143–151
- periodic solutions
 - bifurcation 137
 - of autonomous systems 139–145
 - of conservative systems 148–151
 - of hamiltonian systems 151–153
 - of hyperbolic equations 130–135
 - under small perturbation 38–44
- Poincaré inequality 4
- potential operator 12, 21–22
- proper map 46
- range of an operator 2
- Rellich theorem 4
- Schwarz theorem 28
- singular ordinary point 56
- singular point 46
 - point for a differential system 145
- Sobolev
 - embedding theorems 4–5
 - spaces 4
 - splitting 1
 - stability of closed orbits 38–44
 - string, rotating 107–112
 - Sturm–Liouville
 - problems 7
 - bifurcation 97–98
 - subsolution 75
 - supersolution 75
- Taylor’s formula 28–29
- three-body problem (restricted) 153–159
 - equilibrium points 154–156
 - Euler points 154
 - Lagrangian points 155–156
 - linear stability 159
 - small oscillations 156–159
- topological complement 1
- transversality condition 143
- water waves 123–129
- weak solution 5
