<i>Introduction</i>	<i>page</i> xiii
<i>Acknowledgments</i>	xvii
Part one: Reachable sets and controllability	1
1 Basic formalism and typical problems	3
1 Differentiable manifolds	3
1.1 Differentiable mappings	6
1.2 The tangent space	7
1.3 The cotangent space	8
2 Vector fields, flows, and differential forms	11
2.1 Derivations	11
2.2 The tangent bundle and cotangent bundle	12
2.3 Vector fields and differential forms	14
3 Control systems	20
3.1 Families of vector fields and control systems	27
Notes and sources	31
2 Orbits of families of vector fields	32
1 The orbit theorem	32
1.1 Submanifolds	33
1.2 Integral submanifolds	35
1.3 Proof of the orbit theorem	36
2 Lie brackets of vector fields and involutivity	40
2.1 Lie brackets of vector fields	40
2.2 Lie algebras	42
2.3 Involutivity and integral manifolds	43
3 Analytic vector fields and their orbit properties	48
3.1 Lie groups	50

3.2	Group translations and invariant vector fields	51
3.3	Orbits of invariant vector fields	52
3.4	$GL_n(R)$ and its subgroups	54
3.5	Homogeneous spaces	55
4	Zero-time orbits of families of vector fields	56
4.1	Zero-time orbits of analytic vector fields	59
	Notes and sources	63
3	Reachable sets of Lie-determined systems	64
1	Topological properties of reachable sets	65
1.1	Reachable sets of the form $\mathcal{A}_{\mathcal{F}}(x, \leq T)$	65
1.2	Reachable sets of the form $\mathcal{A}_{\mathcal{F}}(x, T)$	70
2	The closure of the reachable sets and its invariants	75
2.1	Closure and convexification of families of vector fields	76
2.2	Time scaling and normalizers	82
3	The Lie saturate and controllability	86
4	Exact time controllability	89
	Notes and sources	94
4	Control affine systems	95
1	Kinematic equations of a rolling sphere	96
2	Linear systems	100
3	Control of a rigid body by means of jet torques	103
4	Reachability by piecewise-constant controls	105
5	Reachability by smooth controls	110
6	Recurrent drifts and control of a rigid body	112
7	Compact constraints and the closure of the reachable sets	117
8	Non-holonomic aspects of control theory	121
	Notes and sources	124
5	Linear and polynomial control systems	125
1	Feedback, controllability, and the structure of linear systems	126
1.1	Controllability indices and the feedback-decomposition theorem	129
1.2	Controllability and the spectrum	133
2	Bounded controls and the bang-bang principle	134
3	Controllability of linear systems with bounded controls	137
4	Polynomial drifts	141
4.1	Homogeneous polynomial vector fields and their Lie algebras	143
4.2	Controllability	147
	Notes and sources	148

<i>Contents</i>		ix
6	Systems on Lie groups and homogeneous spaces	150
1	Families of right-invariant vector fields on a Lie group	153
1.1	Compact Lie groups	154
1.2	Orthogonal and symplectic groups and the unitary group	159
1.3	Stiff Serret-Frenet frames	162
1.4	The Grassmann manifolds	163
1.5	Motions of a sphere rolling on another sphere	165
1.6	Quaternions and rotations	169
2	Semidirect products of Lie groups	177
3	Controllability properties of affine systems	182
4	Controllability on semisimple Lie groups	185
	Notes and sources	193
 Part two: Optimal control theory		 195
7	Linear systems with quadratic costs	199
1	Assumptions and their consequences	200
1.1	Optimality and the boundaries of the reachable sets	202
2	The maximum principle	204
2.1	Canonical coordinates and Hamiltonian vector fields	204
2.2	Necessary and sufficient conditions of optimality	207
2.3	The Euler-Lagrange equation	214
3	Conjugate points for the regular problem	216
4	Applications: Wirtinger's inequality and Hardy-Littlewood systems	219
	Notes and sources	226
8	The Riccati equation and quadratic systems	228
1	Symplectic vector spaces	230
1.1	The geometry of linear Lagrangians	232
2	Lagrangians and the Riccati equation	234
3	The algebraic Riccati equation	241
4	Infinite-horizon optimal problems	244
5	Hardy-Littlewood inequalities	251
	Notes and sources	258
9	Singular linear quadratic problems	259
1	The structure of the strong Lie saturate	261
1.1	The structure of jump fields	267
1.2	The saturated linear quadratic system	272
2	The maximum principle and its consequences	275
3	The reduction procedure	283

x	<i>Contents</i>	
	4 The optimal synthesis	290
	Notes and sources	299
10	Time-optimal problems and Fuller's phenomenon	300
	1 Linear time-optimal problems: the maximum principle	301
	1.1 Time-optimal control of linear mechanical systems	307
	2 The brachistochrone problem and Zermelo's navigation problem	311
	3 Linear quadratic problems with constraints, and Fuller's phenomenon	319
	Notes and sources	331
11	The maximum principle	332
	1 The maximum principle in \mathbb{R}^n	333
	1.1 Background	333
	1.2 The basic optimal problem and the maximum principle	335
	1.3 The maximum principle and the classic necessary conditions for optimality	338
	1.4 The minimal surface of revolution	345
	2 Extensions to differentiable manifolds	348
	2.1 The symplectic structure of the cotangent bundle	349
	2.2 Variational problems on manifolds and the maximum principle	354
	2.3 Euler's elastic problem and the problem of Dubins	360
	Notes and sources	367
12	Optimal problems on Lie groups	368
	1 Hamiltonian vector fields	369
	1.1 Realization of the cotangent bundle as the product $G \times \mathcal{L}^*$	369
	1.2 The symplectic form	370
	2 The rigid body and the equations for the heavy top	372
	3 Left-invariant control systems and co-adjoint orbits	379
	4 The elastic problem in \mathbb{R}^3 and the kinetic analogue of Kirchoff	384
	5 Casimir functions and the conservation laws	394
	5.1 Left-invariant optimal problems on the group of motions of a plane	398
	5.2 Left-invariant optimal problems on $SO_3(\mathbb{R})$ and $SO(2, 1)$	401
	Notes and sources	406
13	Symmetry, integrability, and the Hamilton-Jacobi theory	407
	1 Symmetry, Noether's theorem, and the maximum principle	409

<i>Contents</i>	xi
2 The geometry of Lagrangian manifolds and the Hamilton-Jacobi theory	414
3 Integrability	424
3.1 Integrable systems on the Heisenberg group	424
3.2 Integrable systems on the group of motions of a plane	430
3.3 Integrability on $SO_3(\mathbb{R})$	436
Notes and sources	443
14 Integrable Hamiltonian systems on Lie groups: the elastic problem, its non-Euclidean analogues, and the rolling-sphere problem	444
1 The symmetric elastic problem in \mathbb{R}^3	446
1.1 Euler angles and elastic curves	453
2 Non-Euclidean symmetric elastic problems	456
2.1 Algebraic preliminaries	456
2.2 The structure of extremal curves	458
2.3 The Kowalewski elastic problem	465
3 Rolling-sphere problems	467
3.1 The extremals for the rolling sphere in E^2	468
3.2 Noninflectional solutions	477
3.3 Inflectional solutions	479
Notes and sources	481
