Preface	xi
0. Review of thin sets	
0.1 Introduction	1
0.2 The fine topology	2
0.3 Reduced functions and thinness	4
0.4 Thin sets and the Dirichlet problem	4
0.5 Wiener's criterion	6
1. Approximation on compact sets	
1.1 Introduction	7
1.2 Local approximation on compact sets with empty interior .	8
1.3 Local harmonic approximation	11
1.4 Proof that (b) implies (a) in Theorem 1.3	14
1.5 Proof that (a) implies (b) in Theorem 1.3	15
1.6 Pole pushing	16
1.7 Runge approximation	18
1.8 Proof that (b) implies (a) in Theorem 1.10	20
1.9 Proof that (a) implies (b) in Theorem 1.10	22
1.10 An analogue of Mergelyan's Theorem	23
1.11 The case where $n = 2$	24
2. Fusion of harmonic functions	
2.1 Introduction	27
2.2 Preliminary lemmas	28
2.3 A fusion result	32
3. Approximation on relatively closed sets	
3.1 Introduction	39
3.2 Local connectedness	40
3.3 Pole pushing	42

3.4	A sufficient condition for Runge approximation	43
3.5	Relating the error to the set E	45
3.6	Proof of Theorem 3.11	48
3.7	A necessary condition for Runge approximation	49
3.8	Runge approximation	51
3.9	Approximation by functions in $\mathcal{H}(E)$	55
3.10	Arakelyan approximation	57
3.11	Weak approximation	58
4.	Carleman approximation	
4.1	Introduction	63
4.2	Decay of harmonic functions	64
4.3	Approximation by functions in $\mathcal{H}(E)$	65
4.4	Carleman approximation	68
4.5	Approximation of functions in $\mathcal{H}(E)$	68
5.	Tangential approximation at infinity	
5.1	Introduction	73
5.2	Preliminary lemmas	73
5.3	A fusion result	78
5.4	Pole pushing	80
5.5	Approximation of functions in $\mathcal{H}(E)$	81
5.6	Approximation of functions in $C(E) \cap \mathcal{H}(E^\circ)$	83
6.	Superharmonic extension and approximation	
6.1	Introduction	85
6.2	Strong extension	85
6.3	Extension from compact sets	88
6.4	Extension from relatively closed sets	92
6.5	Runge approximation	96
6.6	Approximation on compact sets	97
6.7	Approximation of functions in $C(E) \cap \mathcal{S}(E^\circ)$	99
7.	The Dirichlet problem with non-compact boundary	
7.1	Introduction	103
7.2	The Dirichlet problem	104
7.3	Proof that (b) implies (a) in Theorem 7.1	104
7.4	Proof that (a) implies (b) in Theorem 7.1	107
7.5	A maximum principle	108

8. Further applications	
8.1 Non-uniqueness for the Radon transform	113
8.2 A universal harmonic function	116
8.3 Boundary cluster sets of subharmonic functions	117
8.4 Growth of harmonic functions along rays	122
References	125
Index	131
