This book is about the social life of monkeys, apes and humans. The central theme is the importance of social information and knowledge to a full understanding of primate social behaviour and organization. Using this perspective, the authors seek to demonstrate a continuity between human and non-human society that is often not recognized elsewhere in the literature. Topics covered include an overview of the contexts of behaviour; a comparison of blind strategies and tactical decision-making; social cognition; a review of intentionalist interpretations of behaviour; kinship; language and its social implications; and the constraints of culture.

Primate Behaviour will be of interest to senior undergraduate and graduate students as well as to researchers in the fields of biological and social anthropology, primatology, psychology, behavioural science, and evolutionary biology.

Acknowledgments

Many colleagues have helped in the preparation and writing of this book. We should like to thank Nicholas Mascie-Taylor for the initial suggestion, and Alan Crowden for some helpful preliminary discussions. A number of colleagues have read the whole or parts of the book, and we are especially grateful to Phyllis Lee, James McKenna, Nicholas Allen, and Robin Dunbar. Sara Trevitt and Tracey Sanderson have been helpful editors, and Alison Litherland was a meticulous sub-editor. We thank Alice Gustafsen for her help with the artwork. Finally we are greatly indebted to Leona Rozinski and Val de Newtown for help in the preparation of the manuscript.
