

Index

- Abelian surface: VIII.2
 adjunction formula: I.15
 adjunction terminates: V.8–9, VI.18
 Albanese fibration: V.15
 Albanese morphism: V.13
 Albanese variety: V.13
 automorphisms of elliptic curves:
 V.12, VI.16
- Bezout's theorem: I.9 *a*)
 bielliptic surface: VI.19–20
 birational automorphisms of ruled
 surfaces: III, Exercise 4
 birational automorphisms of minimal
 non-ruled surfaces: V.19
 birational equivalence: Chap. II
 birational morphisms (structure of):
 II.11, II.19
 bitangents to a plane quartic: IV,
 Exercise 14
 blow-up: II.1
 Bordiga surface: IV, Exercise 20
- canonical divisor: I.13
 Castelnuovo-De Franchis lemma: X.9
 Castelnuovo's contractibility
 criterion: II.17
 Castelnuovo's theorem (rationality
 criterion): V.1
 complete intersection: VII.5
 complete intersection of two
 quadrics: IV.16
 complex torus: V.11
 cubic ruled surface in \mathbb{P}^4 : IV.7 cubic
 surface: IV.13
 cubic surface contains 27 lines:
 IV.12; IV, Exercises 12,14
 cubic surface with a double line:
 IV.8; IV, Exercise 9
- Del Pezzo surface: IV.9; V, Exercises
 1,2
 Donaldson polynomial: Appendix C
 double-six: IV, Exercise 12
- elementary transformation: III,
 Exercises 1–7
 elimination of indeterminacy: II.7
 elliptic surface: Chap. IX
 Enriques' theorem (characterisation
 of ruled surfaces): VI.17
 Enriques surfaces: VIII.2, VIII.17–20;
 IX, Exercises 4–7
 exceptional curve: II.17; II.19
 exceptional curve of the second kind:
 II, Exercise 3
- \mathbb{F}_n : III.15, IV.1, V.10; III, Exercises
 5–7; IV, Exercises 1,2
- genus formula: I.15
 genus (geometric, arithmetic, pluri-):
 III.19, III.23
 geometrically ruled surface: III.3,
 III.7, III.18
 Godeaux surface: X.3.4
- Hopf surfaces: Appendix B
 hyperelliptic surface: VI.19
- Iitaka's conjecture: Appendix C
 infinitely near points: II, Exercise 2
 Inoue surfaces: Appendix B
 intersection multiplicity: I.2
 intersection number: I.3
 irregularity: III.19–20
- $K3$ surface: VIII.2, VIII.8–16,
 Appendix C
 Kodaira dimension: Chap. VIII

Kodaira surfaces: Appendix B
 Kummer surface VIII.10; VIII,
 Exercises 4–9

linear system: II.5
 Lüroth's theorem: V.4

minimal model: II.15
 minimal model of non-ruled surfaces
 (unicity): V.19
 minimal model of rational surface:
 V.10
 minimal model of ruled surface:
 III.10
 moduli of $K3$ surfaces: VIII.16;
 VIII.21
 moduli of Enriques surfaces: VIII,
 Exercise 13

nef divisor: Appendix C
 Néron-Severi group: I.10
 Noether-Enriques theorem (on ruled
 surfaces): III.4
 Noether's formula: I.14; I.18
 Noether's inequality: X, Exercise 1
 numerical invariants: III.19–20
 numerical invariants of ruled
 surfaces: III.21
 numerical invariants of surfaces with
 $\kappa = 0$: VIII.2

Picard group: I.1, I.10
 projection from $p \in \mathbb{P}^n$: II.14.1,
 IV.4–5
 projections of the Veronese surface:
 IV.6–8
 projective bundles $\mathbb{P}_C(E)$: III.2(b),
 III.15–18
 product of curves: VII.4

quadratic transformation: II.14.3
 quartics in \mathbb{P}^3 with double curves:
 III, Exercise 9; IV, Exercises 8,
 15, 18
 quartic symmetroid: VIII, Exercise
 14
 quasi-elliptic surface: Appendix A

rational map: II.4
 rational map and linear systems:
 II.6, IV.2–9
 rational surface: III.1; Chap. IV
 rational variety: V.3
 rationality theorem: Appendix C
 Reye congruence: VIII.19
 Riemann-Roch theorem: I.12

Riemann-Roch for rank 2 vector
 bundles: III.12
 ruled surface: Chap. III; criterion for
 —: VI.18

Seiberg-Witten invariants: Appendix
 C
 Serre duality: I.11
 Stein factorisation: V.17
 Steiner surface: IV.6; IV, Exercises
 7–8
 strict transform (of a curve): II.1
 surfaces of class VII_0 : Appendix B
 surfaces of general type: Chap. X
 surfaces of general type with $p_g = 0$:
 X.3(4); X, Exercises 3–4
 surfaces with $p_g = 0$, $q \geq 1$: V.18,
 VI.13

unirational variety: V.3–5
 universal property of blowing-up: II.8
 useful remark: III.5

van de Ven conjecture: Appendix C
 vector bundles over a curve: III.15
 Veronese surface: IV.6; IV, Exercise
 6

Weddle surface: VIII, Exercise 7
