<i>Introduction</i>	xv
<i>Preface</i>	xxxii

PART ONE: THE GENERAL THEORY

1	Lie Groupoids: Fundamental Theory	3
1.1	Groupoids and Lie groupoids	4
1.2	Morphisms and subgroupoids	11
1.3	Local triviality	14
1.4	Bisections	21
1.5	Components and transitivity	28
1.6	Actions	34
1.7	Linear actions and frame groupoids	43
1.8	Notes	48
2	Lie Groupoids: Algebraic Constructions	53
2.1	Quotients of vector bundles	54
2.2	Base-preserving quotients of groupoids	60
2.3	Pullback groupoids	63
2.4	General quotients and fibrations	65
2.5	General semidirect products	77
2.6	Classes of morphisms	82
2.7	Notes	83

Contents

3	Lie Algebroids: Fundamental Theory	85
3.1	Quotients of vector bundles by group actions	86
3.2	The Atiyah sequence of a principal bundle	90
3.3	Lie algebroids	99
3.4	Linear vector fields	110
3.5	The Lie algebroid of a Lie groupoid	119
3.6	The exponential map	132
3.7	Adjoint formulas	141
3.8	Notes	143
4	Lie Algebroids: Algebraic Constructions	148
4.1	Actions of Lie algebroids	149
4.2	Direct products and pullbacks of Lie algebroids	155
4.3	Morphisms of Lie algebroids	157
4.4	General quotients and fibrations	166
4.5	General semidirect products	171
4.6	Classes of morphism	175
4.7	Notes	176
PART TWO: THE TRANSITIVE THEORY		
5	Infinitesimal Connection Theory	181
5.1	The Darboux derivative	182
5.2	Infinitesimal connections and curvature	185
5.3	The principal bundle formulation	193
5.4	Local descriptions	205
5.5	Notes	210
6	Path Connections and Lie Theory	212
6.1	The monodromy groupoid	214
6.2	Lie subalgebroids and morphisms	221
6.3	Path connections	228
6.4	Parallel sections and stabilizer subgroupoids	236
6.5	The abstract theory of transitive Lie algebroids	248
6.6	Notes	254

Cambridge University Press

<i>Contents</i>		ix
7	Cohomology and Schouten Calculus	257
7.1	Cohomology and abelian extensions	260
7.2	Couplings of Lie algebroids and \mathcal{H}^3	271
7.3	Non-abelian extensions of Lie algebroids	277
7.4	The spectral sequence	288
7.5	Schouten Calculus	304
7.6	Notes	308
8	The Cohomological Obstruction	311
8.1	The classical case	311
8.2	Transition forms and transition data	314
8.3	The obstruction class	323
8.4	Notes	332
PART THREE:		
THE POISSON AND SYMPLECTIC THEORIES		
9	Double Vector Bundles	339
9.1	General double vector bundles	340
9.2	Duals of double vector bundles	348
9.3	The prolongation dual	354
9.4	The cotangent double vector bundle	357
9.5	The reversal isomorphism	360
9.6	The double tangent bundle and its duals	363
9.7	The tangent prolongation Lie algebroid	367
9.8	Vector fields on Lie groupoids	372
9.9	Notes	378
10	Poisson Structures and Lie Algebroids	380
10.1	Poisson structures	382
10.2	Poisson cohomology	387
10.3	Linear Poisson structures	389
10.4	Coisotropic submanifolds, etc	397
10.5	Notes	405

Contents

11	Poisson and Symplectic Groupoids	408
11.1	Poisson–Lie groups	410
11.2	\mathcal{VB} –groupoids and their duals	415
11.3	The structure of T^*G	419
11.4	Poisson groupoids	420
11.5	Symplectic groupoids	429
11.6	Table of canonical isomorphisms	439
11.7	Notes	442
12	Lie Bialgebroids	446
12.1	Lie bialgebroids	447
12.2	The morphism criterion for Lie bialgebroids	455
12.3	Further Poisson groupoids	461
12.4	Poisson actions and moment maps	467
12.5	Notes	470
	Appendix	473
	<i>Bibliography</i>	479
	<i>Index</i>	496
