<i>Preface</i>	vii
1 Orthonormal systems and their applications	1
1.1 Basic notions	1
1.2 Additive Carlitz polynomials	13
1.3 Hyperdifferentiations	17
1.4 The digit principle	22
1.5 Finite places of a global function field	32
1.6 The Carlitz module	36
1.7 Canonical commutation relations	40
1.8 Comments	44
2 Calculus	47
2.1 \mathbb{F}_q -linear calculus	47
2.2 Umbral calculus	60
2.3 Locally analytic functions	75
2.4 General smooth functions	82
2.5 Entire functions	90
2.6 Measures and divided power series	99
2.7 Comments	102
3 Differential equations	105
3.1 Existence and uniqueness theorems	105
3.2 Strongly nonlinear equations	114
3.3 Regular singularity	120
3.4 Evolution equations	131
3.5 Comments	135
4 Special functions	137
4.1 Hypergeometric functions	137

4.2	Analogues of the Bessel functions and Jacobi polynomials	142
4.3	Polylogarithms	145
4.4	K -binomial coefficients	154
4.5	Overconvergence properties	159
4.6	Comments	166
5	The Carlitz rings	167
5.1	Algebraic preliminaries	167
5.2	The Carlitz rings	173
5.3	The ring \mathfrak{A}_1	178
5.4	Quasi-holonomic modules	185
5.5	Comments	201
	<i>Bibliography</i>	203
	<i>Index</i>	209
