

## Index

- “atomic-like” fluids at extreme conditions, 13
- “Hot” and “cold” electron systems, 130
- “icy” molecules are called “nebular”, 108
- “turbulent” convective cores, 118
- adiabatic compression, 1
- asymptotic freedom, 13, 137
- Basics of dynamic compression, 17
- Basics of shock compression, 19
- Bibliography on shock compression, 16
- bonds-to-band transition, 87
- bonds-to-bands crossover, 137
- Brief history of high-pressure research: 1643 to 1968, 63
- Chemical compositions and properties, 108
- Cold, warm and hot, 7
- Condensed H<sub>2</sub> and D<sub>2</sub> samples, 90
- crossover from condensed matter to WDM, 138
- Decay of shock wave, 39
- Degeneracy factor, 7
- Design of sample holders, 8
- diamond anvil cell (DAC), 60
- dissipation energy, 4
- Dynamic compression, 1
- Dynamic compression of hydrogen:
  - Z Accelerator, 104
- dynamic isentrope, 5
- dynamic pressure pulse, 2
- EOS of dense fluid hydrogen, 95
- equilibration process, 70
- Error bars of shock-compression data, 29
- Experimental data, 110
- Fe  $\alpha$ - $\epsilon$  transition, 64
- Fermi temperature, 6
- front of a shock wave, 1
- Galileo, 63
- Gas, an H-rich mixture of H and He, 108
- generation of dynamic pressures, 53
- GGG goes opaque at 130 GPa, 124
- giant pulsed laser, 58
- H. G. Drickhamer, 64
- Helmholtz free energy, 4
- Hugoniot of liquid diatomics, 43
- hydrodynamic computational simulations, 44
- Hydrogen and water under static compression and heating, 114
- Ice, a mixture primarily of H<sub>2</sub>O, CH<sub>4</sub>, and NH<sub>3</sub>, 108
- ideal-gas equation of state (EOS), 63
- Inertial Confinement Fusion (ICF), 15, 70
- Interfacial instabilities, 51
- isothermal static compression, 2
- J. C. Jamieson, 64, 75
- L. V. Altshuler, 76
- Limiting shock compression, 31
- Lord Kelvin, 63
- materials effects, 47
- mechanical equilibrium, 9
- metallic fluid hydrogen (MFH), 2
- Metallic solid hydrogen (MSH), 11, 84, 104
- Metallization of fluid hydrogen, 84
- MFH by quasi-isentropic compression, 48
- Minimizing interfacial ICF instabilities, 52
- minimum metallic conductivity (MMC), 80
- molecular dynamics, 2
- Multiple-shock compression, 2
- Multiple-shock waves, 3
- Nature of metallic fluid hydrogen, 98
- Navier-Stokes equations, 2
- novel metastable solids, 15

158

optical reflectivities, 135

P. W. Bridgman, 64, 72  
 P.-H. Hugoniot, 69  
 Pascal, 66  
 phase cross overs, 42  
 phase stability, 87  
 Phase transitions, 40  
 Polar wander, 119

quasi-isentropic compression, 3  
   of an ideal gas, 31  
   cylindrical and spherical compressions, 59  
   multiple-shock compression, 47

Radial edge effects, 45  
 Ramp compression, 5–6  
 ramp wave, 3  
 Rankine-Hugoniot equations, 23  
 Rayleigh line, 21, 27, 81  
 Rock, a mix of silicates and Fe/Ni, 108

Scientific Method, 65, 77  
 shock dissipation energy, 27  
 shock front, 2  
 shock front on an atomic scale, 20  
 shock-impedance matching, 28  
 shock-induced opacity, 14  
 shock-induced opacity in transparent crystals,  
   121  
 shock-pressure release, 25  
 small molecules decompose, 111  
 speed of sound along the Hugoniot, 38  
 Static compression, 1

*Index*

Static pressure calibration, 61  
 Strength and shock propagation, 33  
 supersonic compressional wave, 1  
 supersonic hydrodynamics, 3  
 Synthetic Uranus (SU), 110  
 Systematics of fluid H, N, O, Rb, and Cs  
   conductivities, 99  
 Systematic Hugoniots, 43

theoretical investigation, 2  
 thermal and mass diffusion and chemical  
   corrosion, 33  
 Thermal equilibrium, 9, 37  
 Thermodynamic states, 1  
 Torricelli, 63–65  
 total-energy calculations, 86  
 Tunable thermodynamics, 4  
 Tuning thermodynamics, 91  
 two-stage light-gas gun, 54

underground nuclear explosions, 134  
 unusual non-dipolar non-axisymmetric magnetic fields  
   of Uranus and Neptune, 105  
 Uranus and Neptune (U/N)  
   magnetic fields, 11

W. J. M. Rankine, 63, 69  
 Warm Dense Matter, 137  
 Wigner and Huntington, 4

Z Accelerator  
   magnetic pressure, 54

$\alpha$ – $\varepsilon$  transition in Fe, 73
