<i>Preface</i>	<i>page</i>	ix
1 Introduction		1
1.1 Basic definitions		1
1.2 Continuous-time random walk		6
1.3 Other lattices		7
1.4 Other walks		11
1.5 Generator		11
1.6 Filtrations and strong Markov property		14
1.7 A word about constants		17
2 Local central limit theorem		21
2.1 Introduction		21
2.2 Characteristic functions and LCLT		25
2.2.1 Characteristic functions of random variables in \mathbb{R}^d		25
2.2.2 Characteristic functions of random variables in \mathbb{Z}^d		27
2.3 LCLT – characteristic function approach		28
2.3.1 Exponential moments		46
2.4 Some corollaries of the LCLT		51
2.5 LCLT – combinatorial approach		58
2.5.1 Stirling’s formula and one-dimensional walks		58
2.5.2 LCLT for Poisson and continuous-time walks		64
3 Approximation by Brownian motion		72
3.1 Introduction		72
3.2 Construction of Brownian motion		74
3.3 Skorokhod embedding		79
3.4 Higher dimensions		82
3.5 An alternative formulation		84

4	The Green's function	87
4.1	Recurrence and transience	87
4.2	The Green's generating function	88
4.3	The Green's function, transient case	95
4.3.1	Asymptotics under weaker assumptions	99
4.4	Potential kernel	101
4.4.1	Two dimensions	101
4.4.2	Asymptotics under weaker assumptions	107
4.4.3	One dimension	109
4.5	Fundamental solutions	113
4.6	The Green's function for a set	114
5	One-dimensional walks	123
5.1	Gambler's ruin estimate	123
5.1.1	General case	127
5.2	One-dimensional killed walks	135
5.3	Hitting a half-line	138
6	Potential theory	144
6.1	Introduction	144
6.2	Dirichlet problem	146
6.3	Difference estimates and Harnack inequality	152
6.4	Further estimates	160
6.5	Capacity, transient case	166
6.6	Capacity in two dimensions	176
6.7	Neumann problem	186
6.8	Beurling estimate	189
6.9	Eigenvalue of a set	194
7	Dyadic coupling	205
7.1	Introduction	205
7.2	Some estimates	207
7.3	Quantile coupling	210
7.4	The dyadic coupling	213
7.5	Proof of Theorem 7.1.1	216
7.6	Higher dimensions	218
7.7	Coupling the exit distributions	219
8	Additional topics on simple random walk	225
8.1	Poisson kernel	225
8.1.1	Half space	226

	<i>Contents</i>	vii
8.1.2	Cube	229
8.1.3	Strips and quadrants in \mathbb{Z}^2	235
8.2	Eigenvalues for rectangles	238
8.3	Approximating continuous harmonic functions	239
8.4	Estimates for the ball	241
9	Loop measures	247
9.1	Introduction	247
9.2	Definitions and notations	247
9.2.1	Simple random walk on a graph	251
9.3	Generating functions and loop measures	252
9.4	Loop soup	257
9.5	Loop erasure	259
9.6	Boundary excursions	261
9.7	Wilson's algorithm and spanning trees	268
9.8	Examples	271
9.8.1	Complete graph	271
9.8.2	Hypercube	272
9.8.3	Sierpinski graphs	275
9.9	Spanning trees of subsets of \mathbb{Z}^2	277
9.10	Gaussian free field	289
10	Intersection probabilities for random walks	297
10.1	Long-range estimate	297
10.2	Short-range estimate	302
10.3	One-sided exponent	305
11	Loop-erased random walk	307
11.1	h -processes	307
11.2	Loop-erased random walk	311
11.3	LERW in \mathbb{Z}^d	313
11.3.1	$d \geq 3$	314
11.3.2	$d = 2$	315
11.4	Rate of growth	319
11.5	Short-range intersections	323
Appendix		326
A.1	Some expansions	326
A.1.1	Riemann sums	326
A.1.2	Logarithm	327
A.2	Martingales	331
A.2.1	Optional sampling theorem	332

A.2.2	Maximal inequality	334
A.2.3	Continuous martingales	336
A.3	Joint normal distributions	337
A.4	Markov chains	339
A.4.1	Chains restricted to subsets	342
A.4.2	Maximal coupling of Markov chains	346
A.5	Some Tauberian theory	351
A.6	Second moment method	353
A.7	Subadditivity	354
<i>Bibliography</i>		360
<i>Index of Symbols</i>		361
<i>Index</i>		363
