

## CONTENTS

<i>Preface</i>	page xi	<i>The motion of plates</i>	36
<i>Acknowledgements</i>	xv	<i>Plate speeds</i>	37
<b>1 Introduction to the study of surface processes</b>	2	Large-scale mountain ranges: orogens	38
The global context	4	<i>Effects of thickening the crust</i>	39
Overview of geomorphology	5	<i>Effects of erosion on the isostatic balance</i>	41
Guiding principles	6	Mantle response times: geomorphology as a probe of mantle rheology	43
<i>Conservation</i>	6	<i>Ice sheet and ocean loading and the response of the Earth surface to it</i>	44
<i>Transport rules</i>	7	Mantle flow and its influence on topography	49
<i>Event size and frequency</i>	7	<i>Dynamic topography</i>	49
Establishing timing: rates of processes and ages of landscapes	8	<i>Topographic oozing of the Tibetan Plateau margin</i>	50
What drives geomorphic processes?	8	<i>Gooshing of mantle across the continental edge</i>	52
The surface temperature of the Earth	9	Summary	55
The climate context	9	Problems	57
Summary	13	Further reading	59
Problems	14	<b>4 Tectonic geomorphology</b>	60
Further reading	14	Deformation associated with individual faults	62
<b>2 Whole Earth morphology</b>	16	<i>Fault scaling and fault interaction</i>	65
Why an oblate spheroid?	18	<i>Coulomb stress changes</i>	67
Topographic statistics: Earth's hypsometry	21	Determination of offsets from modern earthquakes	69
Summary	24	Paleoseismology	71
Problems	24	<i>Strike-slip faults</i>	71
Further reading	25	<i>Normal faults</i>	72
<b>3 Large-scale topography</b>	26	<i>Megathrust faults</i>	75
Ocean basins: the marriage of conduction and isostasy	28	Long-term deformation: cumulative displacement deduced from offsets of geomorphic markers	78
Plate tectonics overview	36	<i>Marine platforms</i>	79
		<i>River profiles</i>	83
		<i>The special case of corals</i>	84

Flexure	86	<i>Frost cracking</i>	173
Generation of mountain ranges by repeated earthquakes	91	<i>Other fracturing processes</i>	176
Summary	93	<i>The deeper history of fractures</i>	177
Problems	94	<i>Fractures and rock strength</i>	181
Further reading	95	Chemical alteration of rock	183
<b>5 Atmospheric processes and geomorphology</b>	96	<i>Chemical equilibrium</i>	183
The Sun	98	<i>Solubility and saturation</i>	185
Climate and weather processes	99	<i>Rivers, continental crust, and common chemical weathering reactions</i>	186
Why is Earth the “water planet”?	100	<i>Chemical kinetics</i>	191
The spatial pattern of radiation	104	Long-term carbon cycle	200
Vertical structure of the atmosphere	107	Effects of chemical alteration of rock	202
Wind and atmospheric circulation	108	<i>Assessing mass losses (or gains) in regolith</i>	202
<i>Hadley cells</i>	108	<i>Chemical alteration of rock strength</i>	205
<i>Monsoons</i>	110	The conversion of bedrock to mobile regolith	207
<i>Sea breezes</i>	112	<i>Mobile-regolith production functions</i>	207
<i>Katabatic winds</i>	112	Summary	208
<i>Orographic effects</i>	113	Problems	210
Summary	117	Further reading	211
Problems	118	<b>8 Glaciers and glacial geology</b>	212
Further reading	119	Glaciology: what are glaciers and how do they work?	214
<b>6 Dating methods, and establishing timing in the landscape</b>	120	Types of glaciers: a bestiary of ice	215
Relative dating methods	122	Mass balance	216
Absolute dating methods	122	Ice deformation	219
<i>Paleomagnetic dating</i>	123	<i>The rheology</i>	221
<i>Optically stimulated luminescence (OSL)</i>	123	<i>Ice wrinkles 1: Glen’s flow law</i>	223
<i>Amino acid racemization</i>	124	<i>Ice wrinkles 2: sliding/regelation</i>	225
<i>Oxygen isotopes and the marine isotope stages</i>	126	<i>Basal motion by till deformation</i>	232
<i>Radiometric dating methods</i>	128	Applications of glaciology	232
<i>Cosmogenic radionuclides</i>	131	<i>Glacier simulations</i>	232
Shallow geothermometry: establishing long-term rates of exhumation	146	<i>Paleo-climate estimates from glacial valleys</i>	233
<i>Fission tracks</i>	147	<i>Ice sheet profiles</i>	234
<i>Ar/Ar thermochronometry</i>	148	<i>Surging glaciers and the stability of ice sheets</i>	236
<i>(U-Th)/He method</i>	151	<i>Tidewater glaciers</i>	237
Summary	157	The great ice sheets: Antarctica and Greenland	241
Problems	157	Glacial geology: erosional forms and processes	245
Further reading	159	Erosional processes	245
<b>7 Weathering</b>	160	<i>Abrasion</i>	246
Weathering as part of erosion	162	<i>Quarrying</i>	248
The weathered profile	162	Large-scale erosional forms	251
The Critical Zone	164	<i>The U-shaped valley</i>	251
Denudation	165	<i>Cirques, steps, and overdeepenings: the long valley profile</i>	252
<i>Mass loss</i>	165	<i>Fjords</i>	255
Processes that fracture rock	166	Depositional forms	257
<i>Thermal stress and strain</i>	168	<i>Moraines</i>	257
		<i>Eskers</i>	260
		Erosion rates	263
		Summary	265

Problems	267	Soil moisture and its distribution with depth	353
Further reading	268	Infiltration	355
<b>9 Periglacial processes and forms</b>	270	Groundwater	358
Definition and distribution of permafrost	272	<i>The Dupuit case</i>	360
Thermal structure	272	<i>Groundwater rules of thumb</i>	363
<i>Base of the permafrost</i>	273	Runoff mechanisms	363
<i>Active layer depth</i>	275	<i>Infiltration capacity</i>	365
<i>Latent heat</i>	277	<i>Roles of vegetation</i>	365
<i>Departures from the steady-state geotherm</i>	278	<i>Evapotranspiration</i>	365
Geomorphology of periglacial regions	280	<i>Water storage in the soil</i>	366
<i>Segregation ice and frost heave</i>	280	<i>Overland flow generation</i>	366
<i>Upfreezing of stones</i>	283	Overland flow of water and its geomorphic consequences	367
<i>Patterned ground</i>	285	The problem of drainage density	370
<i>Ice wedge polygons</i>	286	<i>Sapping and amphitheater-headed canyons</i>	373
<i>Solifluction lobes</i>	290	<i>Summary of channel head issues</i>	374
<i>Pingos</i>	290	Hydrology of a headwater catchment:	
<i>Thaw lakes</i>	293	the Coos Bay experiment	374
The present rapidly changing Arctic	296	Summary	376
<i>Thermokarst</i>	296	Problems	377
<i>Coastal erosion</i>	298	Further reading	378
<i>Permafrost and carbon</i>	299	<b>12 Rivers</b>	380
Summary	300	Theory and measurement of turbulent flows	
Problems	301	in open channels	382
Further reading	303	<i>The vertically averaged mean velocity</i>	388
<b>10 Hillslopes</b>	304	<i>Other equations for the mean velocity</i>	389
Convexity of hilltops	307	<i>Measurement of channel velocity and discharge</i>	391
Mass balance	308	<i>Summary of theory and measurement of channel flow</i>	394
Diffusive processes	309	Hydraulic geometry	395
Hillslope processes	313	Floods and floodplain sedimentation	396
<i>Rainsplash</i>	313	<i>The floodplain</i>	399
<i>Creep</i>	320	Channel plan views	399
<i>Solifluction: frost creep and gelifluction</i>	320	<i>The braided case</i>	400
<i>Biogenic process examples</i>	325	<i>The meandering case</i>	401
Pacing hillslopes	328	Channel profiles	405
Landslides	330	<i>Character of the bed</i>	407
<i>The force balance at failure</i>	331	<i>River slopes</i>	408
<i>A primer on the behavior of saturated granular materials</i>	334	<i>The influence of baselevel</i>	409
<i>What oversteepens the slopes?</i>	336	The Amazon	411
<i>The aftermath</i>	337	Summary	414
Debris flows	340	Appendix: The Navier–Stokes equation and the origin of the Reynolds and Froude numbers	414
Hillslope models	344	<i>The left-hand side</i>	415
Summary	345	<i>The right-hand side</i>	415
Problems	346	<i>Non-dimensionalization of the Navier–Stokes equation</i>	418
Further reading	347	Problems	419
<b>11 Water in the landscape</b>	348	Further reading	421
Drainage basins	350		
Water balance	352		

<b>13 Bedrock channels</b>	422	Summary	499
Measurement techniques	424	Problems	500
<i>Straths</i>	425	Further reading	501
<i>Lava flows</i>	425		
<i>Caves</i>	425	<b>16 Coastal geomorphology</b>	502
<i>Cosmogenic radionuclides on the channel floor</i>	426	The relative movement of land and sea	504
<i>Short-term monitoring</i>	426	<i>The Pleistocene record</i>	504
Erosion processes	428	<i>Sea level change in the Holocene</i>	505
<i>The stream power approach</i>	428	<i>The last century of sea level change and its causes</i>	506
Abrasion	429	<i>Rock uplift</i>	507
<i>Quarrying</i>	431	Waves	508
<i>Hydraulic wedging</i>	433	<i>Origin of waves</i>	508
<i>Dissolution</i>	433	<i>Transformation of waves</i>	510
<i>Knickpoint migration</i>	434	<i>Hurricane storm surge</i>	511
<i>Summary of processes</i>	435	Physics of sand movement in the littoral system	512
Stream profiles in bedrock channels	435	Sandy coasts	513
The channel width problem	445	<i>Capes and spits</i>	513
<i>Empirical constraints</i>	446	<i>Beach cusps</i>	514
<i>Theory</i>	446	<i>Deltas</i>	515
Summary	449	Rocky coasts	520
Appendix: Future work and research needs	449	<i>Coastal littoral sand budget</i>	521
Problems	450	<i>Pocket beaches and headlands</i>	523
Further reading	451	Icy coasts	524
<b>14 Sediment transport mechanics</b>	452	The continental shelf	526
The pieces of the problem	454	Summary	528
Grain entrainment	455	Problems	530
<i>Recent progress in the fluvial realm</i>	459	Further reading	531
Modes of transport	461	<b>17 The geomorphology of big floods</b>	532
<i>The saltation trajectory</i>	462	Why should we study large floods?	534
<i>The granular splash</i>	463	A historical backdrop	534
<i>Mass flux: transport “laws”</i>	464	A recipe for truly big floods: a bunch of water, a breach of the dam	535
Suspended sediment transport	468	Paleoflood analysis	537
<i>The suspension trajectory</i>	468	<i>Slackwater and separation eddy deposits</i>	538
<i>The continuum approach</i>	469	<i>Estimates of flow competence</i>	538
Summary	473	<i>Paleodischarge estimates</i>	538
Problems	474	The Bonneville flood	538
Further reading	475	Glacial floods: Jökulhlaups	540
<b>15 Eolian forms and deposits</b>	476	The Lake Missoula floods and the channeled scablands	541
Bedforms	478	Lakes Agassiz and Ojibway	546
<i>Classification of dune types</i>	481	The English Channel reinterpreted	549
<i>Models of dunes and their stratigraphy</i>	484	Noah’s flood	549
<i>Eolian ripples</i>	486	Floods from the failure of landslide dams	553
<i>Summary of bedforms</i>	489	Summary	554
Loess	489	Problems	554
Erosion by windblown particles	493	Further reading	555
Windblown snow	497		
Eolian evidence on Mars	498		

<b>18 Whole landscapes</b>	556	<b>Appendix B: Mathematics</b>	584
The Santa Cruz landscape: introduction	558	Numbers worth memorizing	584
Rock uplift: advection around a fault bend	560	Important functions	584
Evolution of the terraces	562	Basic rules of thumb for manipulation of expressions	591
Stream channels	563	Trigonometry	591
Terrace ages	565	Geometry	592
Evolution of soils on the terraces	567	<i>Volume, area, and circumference</i>	592
Implications of the weathering of soils for the hydrology	568	Algebra	592
Littoral system	568	Calculus	592
Seacliff evolution	573	<i>Derivatives</i>	592
Long-term evolution of the coastal plan view	579	<i>Integrals</i>	594
Summary	580	<i>Mean value theorem</i>	594
Problems	580	<i>Taylor series expansion</i>	594
Further reading	581	Ordinary differential equations (ODEs)	595
<b>Appendix A: Physics</b>	582	Partial differential equations (PDEs)	596
Primary units	582	Statistics	596
Key definitions	582	Probability density functions (PDFs)	597
Heat transport mechanisms	583	Goodness of fit	599
Rheologies	583	<i>References</i>	600
Important dimensionless numbers	583	<i>Index</i>	635
Important natural constants	583		
Physical properties	583
