## Part I: INTEGRAL GEOMETRY IN THE PLANE

<b>Chapter 1. Convex Sets in the Plane . . . . .</b>	<b>1</b>
1. Introduction . . . . .	1
2. Envelope of a Family of Lines . . . . .	2
3. Mixed Areas of Minkowski. . . . .	4
4. Some Special Convex Sets . . . . .	6
5. Surface Area of the Unit Sphere and Volume of the Unit Ball . . . . .	9
6. Notes and Exercises . . . . .	10
<b>Chapter 2. Sets of Points and Poisson Processes in the Plane . . . . .</b>	<b>12</b>
1. Density for Sets of Points . . . . .	12
2. First Integral Formulas . . . . .	13
3. Sets of Triples of Points . . . . .	16
4. Homogeneous Planar Poisson Point Processes . . . . .	17
5. Notes . . . . .	20
<b>Chapter 3. Sets of Lines in the Plane. . . . .</b>	<b>27</b>
1. Density for Sets of Lines. . . . .	27
2. Lines That Intersect a Convex Set or a Curve . . . . .	30
3. Lines That Cut or Separate Two Convex Sets . . . . .	32
4. Geometric Applications . . . . .	34
5. Notes and Exercises . . . . .	37
<b>Chapter 4. Pairs of Points and Pairs of Lines . . . . .</b>	<b>45</b>
1. Density for Pairs of Points . . . . .	45

Cambridge University Press

978-0-521-52344-8 - Integral Geometry and Geometric Probability, Second Edition

Luis A. Santaló

Table of Contents

[More information](#)

vi

Contents

2.	Integrals for the Power of the Chords of a Convex Set . . .	46
3.	Density for Pairs of Lines . . . . .	49
4.	Division of the Plane by Random Lines . . . . .	51
5.	Notes . . . . .	58
<b>Chapter 5.</b>	<b>Sets of Strips in the Plane . . . . .</b>	<b>68</b>
1.	Density for Sets of Strips . . . . .	68
2.	Buffon's Needle Problem. . . . .	71
3.	Sets of Points, Lines, and Strips. . . . .	72
4.	Some Mean Values . . . . .	75
5.	Notes . . . . .	77
<b>Chapter 6.</b>	<b>The Group of Motions in the Plane: Kinematic Density . . .</b>	<b>80</b>
1.	The Group of Motions in the Plane . . . . .	80
2.	The Differential Forms on $\mathfrak{M}$ . . . . .	82
3.	The Kinematic Density . . . . .	85
4.	Sets of Segments . . . . .	89
5.	Convex Sets That Intersect Another Convex Set . . . . .	93
6.	Some Integral Formulas . . . . .	95
7.	A Mean Value; Coverage Problems . . . . .	98
8.	Notes and Exercises . . . . .	100
<b>Chapter 7.</b>	<b>Fundamental Formulas of Poincaré and Blaschke . . . . .</b>	<b>109</b>
1.	A New Expression for the Kinematic Density . . . . .	109
2.	Poincaré's Formula . . . . .	111
3.	Total Curvature of a Closed Curve and of a Plane Domain	112
4.	Fundamental Formula of Blaschke . . . . .	113
5.	The Isoperimetric Inequality . . . . .	119
6.	Hadwiger's Conditions for a Domain to Be Able to Contain Another . . . . .	121
7.	Notes . . . . .	123
<b>Chapter 8.</b>	<b>Lattices of Figures. . . . .</b>	<b>128</b>
1.	Definitions and Fundamental Formula. . . . .	128
2.	Lattices of Domains . . . . .	131
3.	Lattices of Curves . . . . .	134
4.	Lattices of Points . . . . .	135
5.	Notes and Exercise . . . . .	138

**Part II. GENERAL INTEGRAL GEOMETRY**

<b>Chapter 9. Differential Forms and Lie Groups . . . . .</b>	<b>143</b>
1. Differential Forms . . . . .	143
2. Pfaffian Differential Systems . . . . .	145
3. Mappings of Differentiable Manifolds . . . . .	148
4. Lie Groups; Left and Right Translations . . . . .	149
5. Left-Invariant Differential Forms . . . . .	150
6. Maurer–Cartan Equations . . . . .	152
7. Invariant Volume Elements of a Group: Unimodular Groups . . . . .	156
8. Notes and Exercises . . . . .	160
<b>Chapter 10. Density and Measure in Homogeneous Spaces . . . . .</b>	<b>165</b>
1. Introduction . . . . .	165
2. Invariant Subgroups and Quotient Groups . . . . .	169
3. Other Conditions for the Existence of a Density on Homo- geneous Spaces . . . . .	170
4. Examples . . . . .	171
5. Lie Transformation Groups . . . . .	173
6. Notes and Exercises . . . . .	175
<b>Chapter 11. The Affine Groups . . . . .</b>	<b>179</b>
1. The Groups of Affine Transformations . . . . .	179
2. Densities for Linear Spaces with Respect to Special Homo- geneous Affinities . . . . .	183
3. Densities for Linear Subspaces with Respect to the Special Nonhomogeneous Affine Group . . . . .	187
4. Notes and Exercises . . . . .	189
<b>Chapter 12. The Group of Motions in <math>E_n</math> . . . . .</b>	<b>196</b>
1. Introduction . . . . .	196
2. Densities for Linear Spaces in $E_n$ . . . . .	199
3. A Differential Formula . . . . .	200
4. Density for $r$ -Planes about a Fixed $q$ -Plane . . . . .	201
5. Another Form of the Density for $r$ -Planes in $E_n$ . . . . .	204
6. Sets of Pairs of Linear Spaces . . . . .	205
7. Notes . . . . .	207

**Part III. INTEGRAL GEOMETRY IN  $E_n$**

**Chapter 13. Convex Sets in  $E_n$**  . . . . . 215

1. Convex Sets and Quermassintegrals . . . . . 215
2. Cauchy's Formula . . . . . 217
3. Parallel Convex Sets; Steiner's Formula . . . . . 220
4. Integral Formulas Relating to the Projections of a Convex Set on Linear Subspaces . . . . . 221
5. Integrals of Mean Curvature . . . . . 222
6. Integrals of Mean Curvature and Quermassintegrals . . . . . 224
7. Integrals of Mean Curvature of a Flattened Convex Body . . . . . 227
8. Notes . . . . . 229

**Chapter 14. Linear Subspaces, Convex Sets, and Compact Manifolds** . . . . . 233

1. Sets of  $r$ -Planes That Intersect a Convex Set . . . . . 233
2. Geometric Probabilities . . . . . 235
3. Crofton's Formulas in  $E_n$  . . . . . 237
4. Some Relations between Densities of Linear Subspaces . . . . . 240
5. Linear Subspaces That Intersect a Manifold . . . . . 243
6. Hypersurfaces and Linear Spaces . . . . . 247
7. Notes . . . . . 248

**Chapter 15. The Kinematic Density in  $E_n$**  . . . . . 256

1. Formulas on Densities . . . . . 256
2. Integral of the Volume  $\sigma_{r+q-n}(M^r \cap M^q)$  . . . . . 258
3. A Differential Formula . . . . . 260
4. The Kinematic Fundamental Formula . . . . . 262
5. Fundamental Formula for Convex Sets . . . . . 267
6. Mean Values for the Integrals of Mean Curvature . . . . . 267
7. Fundamental Formula for Cylinders . . . . . 270
8. Some Mean Values . . . . . 272
9. Lattices in  $E_n$  . . . . . 274
10. Notes and Exercise . . . . . 275

**Chapter 16. Geometric and Statistical Applications; Stereology** . . . . . 282

1. Size Distribution of Particles Derived from the Size Distribution of Their Sections . . . . . 282
2. Intersection with Random Planes . . . . . 286
3. Intersection with Random Lines . . . . . 289
4. Notes . . . . . 290

**Part IV. INTEGRAL GEOMETRY IN SPACES OF  
CONSTANT CURVATURE**

<b>Chapter 17. Noneuclidean Integral Geometry . . . . .</b>	<b>299</b>
1. The $n$ -Dimensional Noneuclidean Space . . . . .	299
2. The Gauss–Bonnet Formula for Noneuclidean Spaces . . . . .	302
3. Kinematic Density and Density for $r$ -Planes . . . . .	304
4. Sets of $r$ -Planes That Meet a Fixed Body . . . . .	309
5. Notes . . . . .	311
<b>Chapter 18. Crofton’s Formulas and the Kinematic Fundamental Formula in Noneuclidean Spaces . . . . .</b>	<b>316</b>
1. Crofton’s Formulas . . . . .	316
2. Dual Formulas in Elliptic Space . . . . .	318
3. The Kinematic Fundamental Formula in Noneuclidean Spaces . . . . .	320
4. Steiner’s Formula in Noneuclidean Spaces . . . . .	321
5. An Integral Formula for Convex Bodies in Elliptic Space . . . . .	322
6. Notes . . . . .	323
<b>Chapter 19. Integral Geometry and Foliated Spaces; Trends in Integral Geometry . . . . .</b>	<b>330</b>
1. Foliated Spaces . . . . .	330
2. Sets of Geodesics in a Riemann Manifold . . . . .	331
3. Measure of Two-Dimensional Sets of Geodesics . . . . .	334
4. Measure of $(2n - 2)$ -Dimensional Sets of Geodesics . . . . .	336
5. Sets of Geodesic Segments . . . . .	338
6. Integral Geometry on Complex Spaces . . . . .	338
7. Symplectic Integral Geometry . . . . .	344
8. The Integral Geometry of Gelfand . . . . .	345
9. Notes . . . . .	349
<b>Appendix. Differential Forms and Exterior Calculus . . . . .</b>	<b>353</b>
1. Differential Forms and Exterior Product . . . . .	353
2. Two Applications of the Exterior Product . . . . .	357
3. Exterior Differentiation . . . . .	358
4. Stokes’ Formula . . . . .	359
5. Comparison with Vector Calculus in Euclidean Three- Dimensional Space . . . . .	360
6. Differential Forms over Manifolds . . . . .	361
Bibliography and References . . . . .	363
Author Index . . . . .	395
Subject Index . . . . .	399
