

Index

Page numbers in *italics* refer to tables and figures.

- α-herpes viruses 230–1
- adenoviruses 232–3
- African swine fever virus, and apoptosis 234
- ageing process
  - and cardiac apoptosis 156–7
- ALS *see* amyotrophic lateral sclerosis
- Alzheimer’s disease
  - aetiology 115
  - apoptosis in 116–22, 117, 123
  - prevalence 115
- amyotrophic lateral sclerosis (ALS)
  - pathology 122–7, 125
  - prevalence 122
- antisense oligonucleotides (ASOs)
  - role in apoptosis 17
- APO-1 death receptors *see* Fas death receptors
- Apoptosis
  - definition and characteristics 1, 2–8, 3–5, 49–50, 96–7, 98–100, 104, 219
  - methods of detection 24, 25–7
  - prevention of 156–62
  - process of 7–8
  - regulation 8–10, 9, 11, 80–2, 98, 99, 102–15, 104–6, 162
  - research 24–8, 50
  - role of 12–13
- apoptosis-inducing factor (AIF) protein
  - role in apoptosis regulation 111–12
- apoptosis-like events 68–9
- apoptosis–necrosis continuum of cell death 101–2, 103
- arteries, apoptosis in 160–2
- ASOs *see* antisense oligonucleotides
- autoimmunity, and apoptosis 194–204
- autoimmunity pathways 195
- autophagy 97, 100–1
- β-herpes viruses 231
- baculoviruses 234
- Bcl-2 protein
  - role in apoptosis regulation 80–1, 98, 105, 107–9
- blood vessels, apoptosis in 160–2
- Caenorhabditis elegans*
  - function of apoptosis in 53
  - history of apoptosis in 51
  - pathways of apoptosis 6, 51, 51–2
- cancer
  - and apoptosis 13, 76–82, 77, 79
  - molecular therapy 82–8
  - research 88–90, 89
  - therapy 82–8
- cardiovascular system, apoptosis in 156, 171
- caspase inhibitors
  - role in apoptosis therapy 17
  - see also* inhibitors of apoptosis
- caspases
  - involvement in apoptosis 5–8, 6, 189, 190–1, 192, 220–8
  - role in apoptosis regulation 81–2, 98, 99, 109–10, 163–5, 167–71
  - role in *Drosophila* apoptosis 55–7
  - role in mammalian apoptosis 62–4
- CD95 death receptors *see* Fas death receptors
- cell
  - cytotoxicity 189–91
  - growth 59–60, 67
  - patterning 59–60
- cell corpses
  - characteristics of 52–3
  - engulfment 57–8, 64

247 Index

- cell death
  - pathways of 2–8
  - programmed *see* apoptosis
  - types 96–101, 97
  - see also* apoptosis–necrosis continuum of cell death
- central nervous system
  - apoptosis in 115
- chicken anemia virus 233
- Currie, A. R. 49
- cysteine-containing aspartate-specific proteases
  - see* caspases
- cytochrome c oxidase
  - role in *Drosophila* apoptosis 56
- cytotoxic T lymphocytes (CTLs)
  - definition and characteristics 188–9
  - role in apoptosis 188, 199–201
- cytotoxicity
  - cell-mediated 189–91
- death-inducing signaling complex (DISC)
  - involvement in activating caspases 7, 189
- death pathways (cell death) 2–8, 3, 5
- death receptors
  - role in apoptosis 220–5
  - role in apoptosis regulation 112–13, 162–4
- dementia *see* Alzheimer’s disease
- deprivation, target
  - and neuron degeneration in animals 116, 120–1
- diabetes
  - autoimmunity in humans 195
  - autoimmunity in mice 194–5
  - role of apoptosis effectors 198–201
- diseases
  - apoptosis in 120–1
- diseases, cardiovascular
  - apoptosis in 156
- diseases, neurologic *see* Alzheimer’s disease; amyotrophic lateral sclerosis; Parkinson’s disease
- DNA viruses 230–4
- Drosophila*
  - apoptosis in 6, 54, 55
- Drosophila* inhibitor of apoptosis protein 1 (DIAP 1) 56
- drug therapy
  - for apoptosis 17–24
- endoplasmic reticulum (ER)
  - role in apoptosis regulation 105, 106
- Epstein–Barr virus 232
- excitotoxicity, role in apoptosis 135
- experimental autoimmune encephalomyelitis (EAE) 195–6
- experimental autoimmune uveitis (EAU) 196
- Fas death receptors
  - as effector of apoptosis 198–201
  - role in apoptosis 163–5, 164, 220–5
- Fas ligands
  - Fas–Fas ligand interaction in apoptosis 189
  - role in cytotoxic lymphocyte apoptosis 192
- foetuses
  - apoptosis in development 156–7
- $\gamma$ -herpes viruses 231–2
- genes
  - apoptosis 8–10, 9, 11, 13–17, 18–23
  - mutations within cancerous cells 75–8, 77
- gene therapy 17–24
- germlines
  - in *Caenorhabditis elegans* 53–4
- Glücksmann, A. 58, 65
- Goodpasture’s syndrome 196–7
- granule exocytosis, role in apoptosis 189–91
- granzymes, role in apoptosis 189–91, 198–201
- Graves’ disease 196–7
- heart
  - apoptosis in 156
- heart failure
  - regulation and therapy 163–7, 170–4, 172
  - role of apoptosis 159–60
  - see also* myocardial infarction
- hepatitis B virus 232
- hepatitis C virus 229
- herpes simplex virus 230–1
- hippocampus
  - degeneration in Alzheimer’s disease 119–20
  - degeneration in rat brain 121 121
- HIV (human immunodeficiency virus) 229–30
- Horwitz, H. R. 49–51, 102, 115
- human T-cell leukaemia virus 229
- Huntington’s disease
  - apoptosis in 124–33, 130
  - prevention and aetiology 131–2

248 Index

- induction, apoptotic
  - as therapy 174
- influenza viruses 229
- inhibitors, apoptotic
  - extent of therapeutic contribution 175
  - use as cardiac therapy 171–4, 172
  - see also caspase inhibitors
- inhibitors of apoptosis (IAPs)
  - case study of discovery 28
  - role in apoptosis 80, 105, 110–11
  - see also *Drosophila* inhibitor of apoptosis protein 1
- injuries, apoptosis following 12, 127
- ischaemia, apoptosis in 157–8
- Keilin, D. 105
- Kerr, J. F. R. 49
- KILLER
  - role in apoptosis 220–5
- ligands
  - role in apoptosis 192–3, 199–201
  - see also Fas ligands
- Lockshin, R. A. 49
- Lou Gehrig’s disease
  - pathology 124, 126
  - prevalence 122
- Lucas, D. R. 133
- lymphocytes, cytotoxic see cytotoxic T lymphocytes (CTLs)
- malignancies
  - apoptosis within 13, 76–82
  - characteristics of malignant cells 75–8, 77
  - therapy 82–8
- mammals
  - apoptosis pathways 6, 61–9, 62, 65
- MAPK (mitogen-activated protein kinase)
  - role in apoptosis regulation 113–14
- mice
  - autoimmunity pathways 194–6
  - nervous system apoptosis 115, 119
  - neuronal degeneration 126–7, 132–3
  - role of excitotoxic apoptosis 134
  - role of Fas and perforin as apoptosis effector 198–9
- microarray technology
  - use in cancer research 88–90
- mitochondria
  - amplification of 164–5
  - role in apoptosis 6, 105–7, 106, 163, 189, 226–8
- mitochondrial proteins
  - role in mammalian apoptosis 62–4
- Mitogen-activated protein kinase (MAPK)
  - role in apoptosis regulation 113–14
- molluscum contagiosum virus 234
- motor neurons, degeneration in amyotrophic lateral sclerosis 122–8, 123, 129
- myocardial infarction (MI)
  - apoptosis 158
- myocyte apoptosis (in heart failure)
  - regulation of 165–7
  - therapy 170–4, 172
- myxoma virus 233
- natural killer (NK) cells
  - role in apoptosis 188
- necrosis
  - as factor in disease 12
  - definition and characteristics 1, 2, 97, 98
- nervous system (human)
  - apoptosis in 115
- nervous system (mice)
  - apoptosis in 115, 119
  - neuronal apoptosis 116, 121, 122
- neurons, degeneration
  - in Alzheimer’s disease 116–22, 117
  - in Parkinson’s disease 129
  - in rats 121
  - see also motor neurons
- Newhouse, J. P. 133
- Olney, J. W. 133
- oncolytic viruses, and apoptosis 17–24
- orthomyxo viruses, and apoptosis 229
- paramyxo viruses 229
- Parkinson’s disease
  - pathology 128–32, 130
  - prevention and aetiology 128
- parovirus B19 228–9
- patterning, cell see cells, patterning
- perforin
  - role in apoptosis 189–91, 198–201
- phosphatidylserine (Ptd Ser)
  - role in mammalian apoptosis 64

249 Index

- polyoma viruses 233
- pox viruses 233–4
- proteins
  - role in apoptosis 8–10, 9, 61, 62, 62–4
- RANKL (TRANCE, osteoprotegerin ligand) 203
- rats and experimental autoimmune encephalomyelitis 195–6
  - neuronal degeneration 121, 121
  - role of excitotoxic apoptosis 134–5
- Reaper, Hid, and Grim genes 56, 59
- reperfusion
  - apoptosis during 157–8
  - role in triggering cardiomyocytic apoptosis 166
- RHG genes 56, 59
- RNA viruses 228–30
- Sendai virus 229
- Sindbis virus 228–9
- SLE (systemic lupus erythematosus) 197
- SODI gene
  - impact on neuronal degeneration in mice 126–7
- Sulston, J. E. 51
- survival, enhanced
  - within cancer cells 78
- synucleins, role in apoptosis regulation 131–2
- systemic lupus erythematosus (SLE) 197
- target deprivation, and apoptosis in animals 116, 120–1
- therapy
  - for cardiomyocytic apoptosis 170–4, 172
  - role of antisense oligonucleotides 17
  - specificity of action in cardiovascular disease 175
  - to arrest apoptosis 12–13, 18–23, 24, 82–8
  - see also* remodelling; reperfusion
- TNF (tumor necrosis factor) family
  - and cytotoxic lymphocyte apoptosis 193, 201–3
  - see also* KILLER; TRAIL
- TNF-like weak inducer of apoptosis (TWEAK) 203
- TRAIL (tumor necrosis factor-related apoptosis-inducing ligands) 192–3, 203, 220–5
- ‘trophic theory’ 67
- tumor necrosis factor (TNF) family *see* TNF family
- tumor necrosis factor receptors (TNFRs)
  - and cytotoxic lymphocyte apoptosis 193, 201–3
  - role in *Drosophila* apoptosis 56–7
- tumors *see* malignancies
- TWEAK (TNF-like weak inducer of apoptosis) 203
- type II programmed cell death 97, 100–1
- Uveoretinitis 196
- vaccinia virus 233
- vascular smooth muscle cells (VSMCs)
  - contribution to apoptosis 160–2
  - regulation of VSMC apoptosis 167–70
- vascular system, apoptosis in 156
- viruses
  - anti-apoptotic pathways 220–8
  - relationship with apoptosis 219
  - role in apoptosis 10
  - strategies to induce/block apoptosis 228–35
