<i>Preface to the first edition</i>	page xi
<i>Preface to the second edition</i>	xiii
<i>Acknowledgments</i>	xiv
<b>1 Overview</b>	1
1.1 Molecular clouds	2
1.2 The IMF, clusters, and binaries	4
1.3 Young stars	5
1.4 Protostars	9
1.5 Long-wavelength emission: dusty envelopes and disks	10
1.6 Imaging of disks	12
1.7 Disk accretion	14
1.8 Disks and planet formation	16
1.9 A picture of star and planet formation	18
<b>2 Beginnings: molecular clouds</b>	21
2.1 Large-scale properties of molecular clouds	21
2.2 Turbulence and cloud lifetimes	23
2.3 Molecular cloud formation and dispersal	26
2.4 Flows, magnetic fields, and cloud formation	30
2.5 Gravity and fragmentation	32
2.6 Sheets and filaments	34
2.7 Turbulence and cloud structure	40
<b>3 Initial conditions for protostellar collapse</b>	43
3.1 Molecular cloud cores	43
3.2 Virial theorem and cloud stability	46
3.3 Centrally concentrated clouds	49
3.4 Core lifetimes and equilibrium	53
3.5 Stability of magnetized clouds	54
3.6 Ambipolar diffusion of magnetic flux	55
3.7 The magnetic flux “problem(s)”	57
	vii

viii	<i>Contents</i>	
<b>4</b>	<b>Protostellar cloud collapse</b>	60
4.1	Free-fall collapse of a uniform cloud	60
4.2	Similarity solution for collapse	61
4.3	Generalized models of protostellar collapse	65
4.4	Rotating collapse	68
4.5	Time evolution of rotating collapse	73
4.6	Disk formation	74
4.7	Massive protostars	76
<b>5</b>	<b>Protostellar collapse: observations vs. theory</b>	82
5.1	Protostellar luminosities and accretion	84
5.2	SEDs of spherical infalling envelopes	86
5.3	SEDs for rotating collapse models	91
5.4	A case study: L1551 IRS 5	94
5.5	The Class 0 sources	98
5.6	Flat spectrum sources	100
5.7	Spatial distribution of emission	103
5.8	Detection of infall from line profiles	104
5.9	Massive protostars	108
<b>6</b>	<b>Binaries, clusters, and the IMF</b>	112
6.1	Observations of binary and multiple systems	113
6.2	Theories of multiple stellar system formation	115
6.3	Evolution of multiple systems during accretion	116
6.4	Young clusters	118
6.5	Cluster formation	121
6.6	The Initial Mass Function	123
6.7	Theories of the IMF	125
<b>7</b>	<b>Disk accretion</b>	129
7.1	Energy minimization and angular momentum conservation	130
7.2	The thin accretion disk	132
7.3	The steady optically thick disk	139
7.4	The $\alpha$ disk	142
7.5	Sources of viscosity: the magnetorotational instability	143
7.6	The ionization problem	146
7.7	Gravitational instability and angular momentum transport	148
7.8	Disk boundary layers	152
7.9	Disk irradiation	155
<b>8</b>	<b>The disks of pre-main-sequence stars</b>	158
8.1	Disk imaging	161
8.2	Disk SEDs	163
8.3	Long-wavelength emission and disk masses	168
8.4	Disk/magnetosphere accretion	173
8.5	Accretion rates	177

<i>Contents</i>	ix
8.6 What drives accretion?	180
8.7 The WTTS	183
8.8 The Herbig Ae/Be stars	184
8.9 The transitional disks	185
<b>9 The FU Orionis objects</b>	188
9.1 Basic observational properties	189
9.2 The accretion disk model	192
9.3 Disk kinematics	196
9.4 Disk properties	200
9.5 Time variability and circumstellar envelopes	203
9.6 Outburst mechanisms	205
9.7 The boundary layer problem	210
9.8 Outburst statistics and evolutionary significance	211
<b>10 Disk winds, jets, and magnetospheric accretion</b>	213
10.1 Outflows and jets	213
10.2 P Cygni profiles	216
10.3 FU Ori disk winds	219
10.4 T Tauri winds	222
10.5 Mass loss rates	223
10.6 Magnetocentrifugal acceleration and collimation	228
10.7 Magnetohydrodynamic flows	229
10.8 MHD disk winds	233
10.9 Applications of MHD disk wind theory	237
10.10 Models of magnetospheric accretion	240
<b>11 Disk accretion and early stellar evolution</b>	247
11.1 Pre-main-sequence stellar evolutionary tracks	247
11.2 Protostellar properties	252
11.3 The “birthline”	253
11.4 Birthlines: comparison with observations	259
11.5 Age estimates	261
11.6 Star formation histories	264
<b>12 Disk evolution and planet formation</b>	268
12.1 Clearing of optically thick disks	269
12.2 Viscous disk evolution	272
12.3 Binaries	275
12.4 Disk evaporation	276
12.5 Dust evolution	279
12.6 Core accretion and planet formation	284
12.7 Gaseous gravitational instability and planet formation	285
12.8 Migration	286
12.9 Disk gaps and holes	287

Table of Contents

[More information](#)

x	<b><i>Contents</i></b>	
12.10	Debris disks	288
12.11	Speculations	290
	<i>Appendix 1 Basic hydrodynamic and MHD equations</i>	292
	<i>Appendix 2 Jeans masses and fragmentation</i>	294
	<i>Appendix 3 Basic radiative transfer</i>	298
	<i>List of symbols</i>	303
	<i>Bibliography</i>	306
	<i>Index</i>	328
