

Contents

<i>Preface</i>	<i>page vii</i>
1 Introduction	1
1.1 Solitons and soliton equations	1
1.2 The inverse scattering transform – Overview	3
1.3 Nonlinear Schrödinger systems	5
1.4 Physical applications	9
1.5 Outline of the work	16
2 Nonlinear Schrödinger equation (NLS)	18
2.1 Overview	18
2.2 The inverse scattering transform for NLS	19
2.3 Soliton solutions	39
2.4 Conserved quantities and Hamiltonian structure	42
3 Integrable discrete nonlinear Schrödinger equation (IDNLS)	46
3.1 Overview	46
3.2 The inverse scattering transform for IDNLS	48
3.3 Soliton solutions	83
3.4 Conserved quantities and Hamiltonian structure	87
4 Matrix nonlinear Schrödinger equation (MNLS)	90
4.1 Overview	90
4.2 The inverse scattering transform for MNLS	91
4.3 Soliton solutions	113
4.4 Conserved quantities and Hamiltonian structure	128
5 Integrable discrete matrix NLS equation (IDMNLS)	130
5.1 Overview	130
5.2 The inverse scattering transform for IDMNLS	133
5.3 Soliton solutions	185
5.4 Conserved quantities	201

Cambridge University Press

0521534372 - Discrete and Continuous Nonlinear Schrödinger Systems

M. J. Ablowitz, B. Prinari and A. D. Trubatch

Table of Contents

[More information](#)

vi

Contents

Appendices	
A Summation by parts formula	204
B Transmission of the Jost function through a localized potential	206
C Scattering theory for the discrete Schrödinger equation	208
C.1 Introduction	208
C.2 Direct scattering problem	210
C.3 Inverse scattering problem	220
C.4 Time evolution and solitons for the Toda lattice and nonlinear ladder network	226
D Nonlinear Schrödinger systems with a potential term	229
D.1 Continuous NLS systems with a potential term	229
D.2 Discrete NLS systems with a potential term	233
E NLS systems in the limit of large amplitudes	239
<i>Bibliography</i>	243
<i>Index</i>	255
