Introduction	1
1 Orders in semisimple algebras	13
1 Simple algebras	13
2 Semisimple modules	17
3 Projective modules and semisimplicity	21
4 The Jacobson radical	23
5 Nondegenerate algebras	26
6 The discriminant	28
7 $\mathbf{Z}$ -orders	30
8 Examples	33
2 Representation theory of finite groups	38
9 Group representations	38
10 Maschke's Theorem	40
11 Division algebras over $\mathbf{Q}$	42
12 Examples of Wedderburn decompositions	45
3 Stable modules and cancellation theorems	52
13 Schanuel's Lemma	52
14 The structure of stable modules	53
15 The Swan–Jacobinski Theorem	56
16 Finiteness of $\tilde{K}_0(\mathbf{Z}[G])$	59
17 Non-cancellation and an example of Swan	60
18 Non-cancellation over group rings	64
4 Relative homological algebra	67
19 The derived category of a tame class	68
20 Derived functors	74
21 The long exact sequence in cohomology	78
22 Stable modules and the derived category	83

23	Module extensions and $\text{Ext}^1$	87
24	General module extensions and $\text{Ext}^n$	94
25	Classification of general module extensions	98
26	Classification of projective $n$ -stems	104
27	The standard cohomology theory of modules	108
5	The derived category of a finite group	114
28	Lattices over a finite group	114
29	The stable modules $\Omega_n(\mathbf{Z})$	120
30	Stably free extensions	122
31	Subgroup relations in the derived category	125
32	Restriction and transfer	129
6	$k$ -invariants	132
33	Endomorphisms in the derived category	132
34	$k$ -invariants and the action of $\text{Aut}_{\mathcal{D}_{\text{der}}}(J)$	135
35	$\Omega_1(\mathbf{Z})$ and $\Omega_{-1}(\mathbf{Z})$	137
36	Swan modules	139
37	Swan's isomorphism criterion	141
38	Congruence classes and Swan modules	146
39	The Tate ring	148
7	Groups of periodic cohomology	151
40	Periodicity conditions	151
41	Examples	154
42	Subgroup structure at odd primes	156
43	Subgroup structure at the prime 2	159
44	The Artin–Tate Theorem	161
45	The Zassenhaus–Suzuki classification	164
8	Algebraic homotopy theory	171
46	Chain complexes, homotopy and homology	172
47	Two-dimensional complexes	180
48	Cayley complexes	183
49	Algebraicity of two-dimensional homotopy	187
9	Stability theorems	193
50	Algebraic stabilization	194
51	Stable isomorphism of stably free extensions	197
52	Eventual stability of homotopy types	200
53	The Swan map	203
54	Module automorphisms and $k$ -invariants	210
55	Realization Theorems	213
56	Augmentation sequences	216
57	Classification over groups of period 4	220

*Contents*

ix

10	The D(2)-problem	224
58	Cohomologically two-dimensional 3-complexes	224
59	The virtual 2-complex	227
60	Reduction to two-dimensional data	229
61	Group presentations and $\Omega_3(\mathbf{Z})$	232
62	Verifying the D(2)-property	234
11	Poincaré 3-complexes	239
63	Attaching 3-cells to a presentation	240
64	Another characterization of groups of period 4	243
65	Poincaré 3-complexes of standard form	245
66	Relationship with the D(2)-problem	247
67	Terminus: the limits of this book	249
	Appendix A The D(2)-property for free groups	252
	Appendix B The Realization Theorem	256
