<i>List of authors and participants</i>	<i>page</i> vii
<i>Preface</i>	xi
1 Reductive groups as metric spaces <i>H. Abels</i>	1
2 Finiteness properties of groups acting on twin buildings <i>P. Abramenko</i>	21
3 Higher finiteness properties of $S$ -arithmetic groups in the function field case I <i>H. Behr</i>	27
4 Controlled topology and group actions <i>R. Bieri and R. Geoghegan</i>	43
5 Finiteness properties of soluble $S$ -arithmetic groups – A survey <i>K.-U. Bux</i>	64
6 Topology in permutation groups <i>P. J. Cameron</i>	93
7 Euler characteristics of discrete groups <i>I. M. Chiswell</i>	106
8 Intersections of Magnus subgroups of one-relator groups <i>D. J. Collins</i>	255
9 A minimality property of certain branch groups <i>R. I. Grigorchuk and J. S. Wilson</i>	297

Table of Contents

[More information](#)

vi	<i>Contents</i>	
10	Lattices with non-integral character <i>H. Helling</i>	306
11	Some applications of probability in group theory <i>A. Mann</i>	318
12	Parity patterns in Hecke groups and Fermat primes <i>T. W. Müller</i>	327
13	Automorphisms of the binary tree: state-closed subgroups and dynamics of $1/2$ -endomorphisms <i>V. Nekrashevych and S. Sidki</i>	375
14	The mapping class group of the twice punctured torus <i>J. R. Parker and C. Series</i>	405
15	Kac–Moody groups: split and relative theories. Lattices <i>B. Remy</i>	487
16	On the finite images of infinite groups <i>D. Segal</i>	542
17	Pseudo-finite generalized triangle groups <i>E. B. Vinberg and R. Kaplinsky</i>	564
