

Contents

<i>Preface</i>	xiii
<i>Acknowledgements</i>	xvii
<i>Chapter notes</i>	xix
1 LANCASTRIAN INHERITANCE	1
1 Putting up the shutters	1
2 The Lancaster of Edward Frankland	9
3 Journey to London	13
2 THE ROAD TO DISCOVERY	20
1 Westminster, Putney and a new acquaintance	20
2 The hunt for radicals	25
3 Cirencester	28
4 Discovery at Marburg	30
3 QUEENWOOD	38
1 Towards the Millennium	38
2 Pioneers in science education	42
3 Disharmony Hall	54
4 NEW WORLDS IN GERMANY	68
1 Return to Marburg	68
2 Research in Bunsen's laboratory	73
3 Interlude in Giessen	80
4 Sophie	83

✧ CONTENTS ✧

5	FUNDAMENTAL DISCOVERIES IN CHEMISTRY	95
1	Putney revisited	95
2	The foundation of organometallic chemistry	101
3	Foundations of the theory of valency	108
6	FRANKLAND AND THE DEVELOPMENT OF VALENCY	118
1	Constituents of a theory of valency	118
1.1	A new synthesis: radicals and types	118
1.2	Tetravalent carbon atoms	121
1.3	Chemical bonds	128
2	A prophet without honour?	129
2.1	The ambivalent rôle of organometallic chemistry	131
2.2	Radicals v. types	132
2.3	Atomic weights v. equivalents	133
2.4	The opposition of Kekulé	134
3	Vindication	138
7	MANCHESTER: 'THE EDUCATIONAL AND COMMERCIAL UTILITY OF CHEMISTRY'	147
1	Owens College	147
2	Education: professional academic	150
3	Commerce: research consultant	159
3.1	The case of 'hydrocarbon gas': analysis of coal and coal-gas	160
3.2	Forming an industrial strategy	164
4	Values, human and otherwise	176
4.1	Family	176
4.2	Religion	183
4.3	The arts	185
4.4	Away from it all	186
5	The end of the road	188
8	RETURN TO THE METROPOLIS	202
1	'Accomplished chemical pluralist'	202
1.1	St. Bartholomew's Hospital	203
1.2	Addiscombe College	208
1.3	The Royal Institution	212
2	Man of affairs	226
2.1	Family	227

* CONTENTS *

2.2 Informal scientific networks	231
2.3 Formal scientific institutions	235
9 ADVANCES IN ORGANIC CHEMISTRY	245
1 Organic chemistry before 1860	245
2 Further developments in organometallic chemistry	249
3 The lactic acids and questions of structure	254
4 Unsaturated acids and problems of reactivity	259
5 Acetoacetic ester and its reactions	262
6 The theory of structure	270
10 THE COMMUNICATION OF CHEMISTRY	281
1 The birth of Frankland's notation	281
2 Frankland and popular chemical education	286
2.1 A new audience for chemistry	286
2.2 Frankland's strategy	288
2.3 The reception of Frankland's new chemistry	298
3 Teaching at the Royal College of Chemistry	303
11 THE X-CLUB AND BEYOND	317
12 FAMILY: YEARS OF CRISIS	342
13 THE ANALYSIS OF WATER SUPPLY	362
1 Something wrong with the water?	362
2 Appointment as official analyst	365
3 New methods of analysis	372
4 The birth of a concept: previous sewage contamination	381
5 Opposition	383
6 Later analytical work	391
7 To what end?	397
14 'THE WILDEST PARTS' OF NATURE	411
1 Science from the mountains	411
1.1 Combustion rates and pressure	415
1.2 The origins of illuminating power	416
1.3 Muscular power and nutrition	421
1.4 Glaciers	426
1.5 Meteorology	429

✦ CONTENTS ✦

2	Science from the sky	433
2.1	Telescopes on earth	433
2.2	Glaciers on the moon?	434
2.3	Helium on the sun	435
15	POWER	441
1	The Chemical Society – and Banquo’s ghost	441
2	The Institute of Chemistry – and ‘technical informality’	445
3	The Royal Society – ‘Frankland won’t do’	457
16	RETIREMENT YEARS	469
1	Reigate Hill	469
2	Abnormal happenings at a Normal School	475
3	‘Remunerative employment’	484
4	A house divided	487
5	Recognition at last	494
17	THE LAST JOURNEY	502
	<i>Index of persons</i>	521
	<i>Subject index</i>	528
